This week, the Department of Health and Hospitals' Office of Public Health awarded \$500,000 to the Town of Olla through the State's Drinking Water Revolving Loan Fund Program (DWRLF). The loan will provide assistance to the Town to install new water meters.

Assistant Secretary for Public Health, J.T. Lane said it's imperative that all Louisiana Residents have access to safe drinking water. "This program gives local communities a source of dependable and affordable financing to bring their water treatment facilities up to the latest and most modern technology that keeps their residents safe and healthy."

The loan was closed March 12, 2014. Workers will install 876 automated water meters for the entire town, and three radio receiver towers. The town will no longer have to manually read the meters. The meters will broadcast their readings to the towers. This is expected to save Olla thousands of dollars by providing more accurate readings and allowing better use of water system employees.

"We're excited about the opportunity to bring Olla's water system into the 21st century with technology that promises to improve service, while saving taxpayers thousands of dollars," said Olla Mayor Rhonda Elliott.

Congress established State Drinking Water Revolving Loan Fund Programs in 1996 as part of the amendments to the Safe Drinking Water Act. The program is jointly funded by an annual grant from the U.S. Environmental Protection Agency (80 percent) and the individual participating states (20 percent). In Louisiana, it is administered by DHH's Office of Public Health. The FY 2012 Drinking Water Capitalization Grant allowed for additional subsidy in the form of principal forgiveness of up to 30 percent of the loan principal, with a cap of \$1,125,000 of principal forgiveness per project. Through this special provision, the DWRLF will provide additional subsidization in the form of principal forgiveness in the amount of \$150,000.

Loans made through this program are low interest and have a maximum 20-year repayment period. Both public and privately-owned community and nonprofit, non-community water systems are eligible to apply for loans.

Once a loan is approved, water systems can use the funds to make their improvements. As the systems pay back the loans, the principal and interest are used to make more money available for other communities that have drinking water needs. All loan projects are approved based upon a priority ranking system. Among other factors, projects that address the most serious risks to human health and those that ensure compliance with the Safe Drinking Water Act are given the highest priority.

"The purpose of the fund is to provide states with a financial mechanism to make below market rate loans to drinking water systems for infrastructure improvements. These improvements assist the systems in complying with the Safe Drinking Water Act and protecting public health," said Jennifer Wilson, program manager for the Drinking Water Revolving Loan Fund.
