1 Overview

1.1 Description

This document outlines the LADSS application purpose, user functions, database design, and user flow. It also breaks down each LADSS screen for future maintenance of the application.

The Louisiana Animal Disease Surveillance System is a system built by the Louisiana Office of Public Health (OPH) to provide early detection and tracking of animal diseases and outbreaks. This system will provide real time data to the State Veterinarian and OPH-IDES, as well as other agencies around the state.

Vendor is converting the existing Java application into ASP.NET 3.0 using the Oracle 10g database. A new database will be built. NOTE: The Java code cannot actually be converted and will need to be recreated.

The LADSS system incorporates the following screens:

- Search
- Case Entry
- Code Tables
- Audit Trail
- Reports
- Import Function
- Profile Maintenance

The LADSS system incorporates the following user types:

- Admin User
- External User
- Read Only User

2 *User Definitions*

2.1 Description

- Admin User
 - Ability to add cases
 - Ability to edit all cases
 - All case functions : New, Save, Cancel, Delete, Print
 - Will receive email notifications
 - Access to audit trail
 - Access to code tables
 - Access to reports
 - Access to import function
 - Access to profile maintenance function
- External User
 - Ability to add and edit their own cases
 - Can see other users' cases as Read-Only
 - Case functions : New, Save, Cancel, Print
 - Will receive email notifications
 - Access to reports
 - Access to import function
 - Access to profile maintenance function
- Read-Only User
 - Can see cases as Read-Only
 - Case functions : Print
 - Access to reports

Diagnosis Status	Drop Down	Database		Yes or No - Filter

3.5.3 Returned Data

- Columns
 - Case #
 - Parish
 - Case Date
 - Onset Date
 - Species
 - Disease
 - Diagnosis Status
 - # of Animals Affected

3.6 Import Cases

- The Excel spreadsheet for the import function will be arranged so all required fields are at the beginning of the sheet.
- Case number will be a required field in the upload.
- Entry Date, Created by, and User Organization will be captured upon upload – will not be in the spreadsheet.
- If all required fields are not in the record during an import, reject the record and produce an error report.
- A pre-formatted template will be provided to the users.
- All duplicate records brought in through the import function should be rejected.
- State information will not be entered in the excel template as all state information will be LA.

3.7 Profile Maintenance

3.7.1 Screenshot

3.7.2 Business Rules

Rule ID	Definition
LADSS - 33	Pull in the email address from SSO initially but if the user changes the email within the system, use this email.
LADSS – 34	The established list of diseases will be listed in the table so that each user can remove these diseases if they wish.
LADSS – 35	When a disease is added to the list, the user will receive email notifications when a new case with the specified disease is created.
LADSS – 36	When a disease is added from the list, the user will no longer receive email notifications for the specified disease.
LADSS – 37	The system should not let a user add the same disease to the list twice – either remove the disease from the drop down if it is already in the list or give an error message.
LADSS – 38	Profile information will be stored by the User ID that individuals use to log into the system.

3.7.3 Field Description Table

Field Name	Data Type	Source	Length	Comments
Disease Name	Drop Down	Code Table		

3.8 Delete Capability

- Only administrators will have access to this function. A prompt should be given 'Are you sure you want to delete this case?'

3.9 Automatic Email Notifications

- When a case with a specified disease is opened, an email will go out to the user groups indicated in the user access control code table.
- The following is the email notifications disease list:
 - Anthrax
 - Brucellosis
 - Rabies
 - Tularemia
 - West Nile Virus
 - Eastern Equine Encephalitis
 - Western Equine Encephalitis
 - Venezuelan Equine Encephalitis
 - Lacrosse Encephalitis
 - Psittacosis (Ornithosis)
 - Camelpox
 - Monkeypox
 - Tuberculosis (due to M bovis or Avian TB)
 - Leishmaniasis
 - Plague
 - H5NI highly pathogenic influenza
 - Other H5 or H7 highly pathogenic influenza
 - Non-Inherited or Sporadic Transmissible Spongiform Encephalopathy
 - Domestically transmitted human malaria
 - Primate malaria
- Users will also be able to identify additional diseases for which they would like to receive emails through their Profile Maintenance screen.
- The email text will be the following:
 - A case of (disease name) has been posted to the Louisiana Animal Disease Surveillance System in the past 24 hours. To view the case details, go to (website).
 LADSS Administration

3.10 Mapping Function

- The address information (or at least parish) will be collected for each case in order to run GeoCoding for Google Maps. Cases will be plotted on a map of Louisiana.

3.11 Code Tables

- Disease
- Species
- Outbreak Type
- Animal Status
- Sample Status
- Add User Group
- User Control

3.12 Disease List

- Anthrax
- Aujeszky's Disease

- Glanders
- Surra (*Trypanosoma evansi*)
- Venezuelan equine encephalomyelitis
- African Swine Fever
- Classical Swine Fever
- Nipah virus encephalitis
- Porcine cysticercosis
- Porcine reproductive and respiratory syndrome
- Swine vesicular disease
- Transmissible gastroenteritis
- Avian chlamydiosis
- Avian infectious bronchitis
- Avian infectious laryngotracheitis
- Avian mycoplasmosis (*M. gallisepticum*)
- Avian mycoplasmosis (*M. synoviae*)
- Duck virus hepatitis
- Fowl cholera
- Fowl typhoid
- Highly pathogenic avian influenza
- Infectious bursal disease (Gumboro disease)
- Marek's disease
- Newcastle disease
- Pullorum disease
- Turkey rhinotracheitis
- Myxomatosis
- Rabbit haemorrhagic disease
- Acarapisosis of honey bees
- American foulbrood of honey bees
- European foulbrood of honey bees
- Small hive beetle infestation (*Aethina tumida*)
- Tropilaelaps infestation of honey bees
- Varroosis of honey bees
- Epizootic haematopoietic necrosis
- Infectious haematopoietic necrosis
- Spring viraemia of carp
- Viral haemorrhagic septicaemia
- Infectious pancreatic necrosis
- Infectious salmon anaemia
- Epizootic ulcerative syndrome bacterial kidney disease (*Renibacterium salmoninarum*)

LADSS

- Gyrodactylosis (*Gyrodactylus salaris*)
- Red sea bream iridoviral disease
- Infection with *Bonamia ostreae*
- Infection with *Bonamia exitiosa*
- Infection with *Marteillia refringens*
- Infection with *Mikrocytos mackini*
- Infection with *Perkinsus marinus*
- Infection with *Perkinsus olseni*
- Infection with *Xenohalictis californiensis*
- Taura syndrome
- White spot disease
- Yellowhead disease
- Tetrahedral baculovirus (*Baculovirus penaei*)
- Spherical baculovirus (*Penaeus monodon*-type baculovirus)
- Infectious hypodermal and haematopoietic necrosis
- Crayfish plague (*Aphanomyces astaci*)
- Camelpox
- Leishmaniasis
- Plague
- Malaria in primates
- *Brucella canis*
- Monkey pox
- TB due to *Mycobacterium bovis* and atypical *Mycobacterium* (Avian TB)
- All highly pathogenic Avian Influenza in birds
- Low path H5 influenza in birds
- H5N1 influenza in humans
- Novel Animal Influenzae (no longer practical to collect info on novel H1N1 influenza)
- Any TSE that is not sporadic or inherited in humans
- Domestically transmitted human malaria
- Primate malaria
- Leptospirosis
- Lacrosse Encephalitis
- Psittacosis (Ornithosis)

3.13 Email Control Interfaces

- Print to PDF
- Email Notifications

3.14 Software Specifications

- ASP.NET 3.0
- Oracle 10g

3.15 Project Assumptions

- Users will be created and given appropriate user credentials through DHH's Single Sign-On.

3.16 Business-Related Questions

- Can an Admin user edit all cases or only cases they have entered? Edit all cases
- Can a Read-Only user access reports? Yes

3.17 Change Requests

3.17.1 Change Requests #1

3.17.1.1 Update to Design

Design header should be changed to read 'Louisiana's Louisiana Animal Disease Surveillance System.'

3.17.1.2 Update to Case Information Tab

The screenshot displays the VSS (Veterinary Surveillance System) interface for Louisiana. The top navigation bar includes links for Search, Audit Trail, Reports, Profile Maintenance, Enter Cases, Code Tables, and Import Cases. The main content area is divided into four tabs: Case Information, Disease/Animal Information, Contact Person, and Laboratory Information. The Case Information tab is active, showing fields for Entry Date (09/10/2009), Last Updated (09/09/2009), Created By (Name), User Organization (Wildlife and Fisheries), Case Number (1234567), Diagnosis Confirmed? (a radio button), and Confirming Laboratory (a text input field). A footer bar contains a note: "This menu will always float at bottom of screen." and a set of action buttons: save, new, cancel, delete, and print.

Field Name	Data Type	Source	Length	Comments
Entry Date	Text	Auto-generated		Date of original entry
Last Updated	Text	Auto-generated		Date of last update to case
Created by	Text	Auto-generated		Name of user who created case
User Organization	Text	Auto-generated		Organization with which creating user is associated with
Case Number	Number	Auto-generated		
Diagnosis Confirmed	Drop Down	Database		Options: 1. Yes 2. No
Confirming Laboratory	Text	User Input

VSS

Louisiana's
Veterinary Surveillance System

Search

Audit Trail

Reports

Profile Maintenance

Enter Cases

Code Tables

Import Cases

Import Cases

Cases can be imported into the system by uploading the VSS .CSV upload template file (Click [here](#) to download the template). If the uploaded records are not in the correct format, they will be rejected by the system (Click [here](#) to download the VSS Upload Help document). After a file has been uploaded, the records will fill into the staging table below where you can determine which records have errored out. All 'accepted' files will have their Process checkbox marked. When the 'Process Records' button is clicked, all records with their Process checkbox marked will be brought into the system. Rejected files that are missing required data cannot be marked to be processed. The template must be edited and re-uploaded in order to process these records. On the other hand, records that are marked as rejected because they have been flagged as a duplicate can be marked to be processed. Also for the duplicate records, the user can use the compare function to view all data in the record side-by-side to determine if it is indeed a duplicate record. Mark the Compare checkbox and click the 'Compare Now' button. NOTE: Only three records can be compared at one time.

Upload .CSV File:

Process	Record #	Case Date	Disease Name	Species	Parish	Status	Error Description	Compare
<input type="checkbox"/>	676263	01/12/2009	Anthrax	Dog	Group	X	Missing required field	<input type="checkbox"/>
<input type="checkbox"/>								<input type="checkbox"/>
<input type="checkbox"/>								<input type="checkbox"/>
<input type="checkbox"/>								<input type="checkbox"/>
<input type="checkbox"/>								<input type="checkbox"/>
<input type="checkbox"/>								<input type="checkbox"/>

Field Name	Data Type	Source	Length	Comments
Upload .CSV File	File extension	Browse from computer files		Must be a .CSV format

Rule ID	Definition
LADSS - 39	The staging table will only show the main records from the upload, not the extra rows for additional lab results
LADSS - 40	The duplicate check will check all imported records from a specific user – will check across submissions
LADSS - 41	If any required fields are missing, the file cannot be processed – dull out the process checkbox
LADSS - 42	The compare feature will be allowed when all required information is included but either the record # AND all required fields match or when all required fields match (but the record # is different)
LADSS - 43	Only three records can be marked to be compared, dull out all boxes once three are selected.
LADSS - 44	When the user selects records and clicks 'Compare Now' they will be taken to the Compare Records screen.
LADSS - 45	For the Error Description of rejected records due to the Sample Status, Animal Status, or Outbreak Status, the options from the code table will be listed in the description.

**Compare Cases**

Mark each record to be processed or deleted and click the 'Save & Return to Import Cases' button.
