

## Clinical Policy: Reduction Mammoplasty and Gynecomastia Surgery

Reference Number: LA.CP.MP.51c Coding Implications
Date of Last Revision: 1/23 Revision Log

See <u>Important Reminder</u> at the end of this policy for important regulatory and legal information.

## **Description**

Reduction mammoplasty, also known as breast reduction surgery, is a surgical procedure to reduce the weight, mass, and size of the breast in those with a female reproductive system. 

Gynecomastia surgery is the surgical correction of over-developed or enlarged breasts in those with a male reproductive system.

When the procedure is not reconstructive and is performed solely for the purpose of altering the appearance of the breast, reduction mammaplasty and removal of breast implants shall be considered cosmetic and not medically necessary.

**Note:** For breast surgeries pertaining to gender affirmation, refer to LA.CP.MP.95 Gender Affirming Procedures.

### Policy/Criteria

- I. It is the policy of Louisiana Healthcare Connections that reduction mammoplasty females for non-cosmetic indications is medically necessary when the criteria in A or B below are met:
  - A. A diagnosis of Macromastia, -all of the following:
    - 1. One of the following:
      - <u>a.</u> Member/enrollee is  $\geq \frac{1618}{1}$  years of age or/or;
      - b. Member/enrollee is < 18 years of age and both of the following:
        - 1.i. Tanner stage V of Tanner staging of sexual maturity (See Appendix A for Tanner Staging);
        - 2.ii. For adolescents, no No breast growth equivalent to a change in cup size for at least 6six months;
    - 2. The estimated amount of breast tissue to be removed meets the minimum weight requirement based on the <u>members\_member/enrollee</u>'s body surface area (BSA) per Appendix B, adapted from the Schnur Sliding Scale.
      - 3. Note: The DuBois and DuBois body surface calculator (found here: <a href="http://www-users.med.cornell.edu/~spon/picu/calc/bsacalc.htm">http://www-users.med.cornell.edu/~spon/picu/calc/bsacalc.htm</a>) may be used to calculate BSA if only height and weight are given; If the weight of resected tissue falls below the 22<sup>nd</sup> percentile of weight to be removed per BSA (the minimum cutoff in the Schnur Sliding Scale in Appendix B), a medical director will review the request on a case-by-case basis;
    - B.3. Member/enrollee has at least at least at least at least a 12-week duration:
      - 1. Chronic breast pain;
      - 2. Headache:
      - 3.a. Neck, shoulder, or back pain;
      - 4.b. Shoulder grooving from bra straps;
    - <u>5.4.</u>Upper extremity paresthesia due to brachial plexus compression syndrome, secondary to the weight of the breasts being transferred to the shoulder strap area;

## **Reduction Mammoplasty and Gynecomastia Surgery**

- 6.3. Thoracic kyphosis;
- 7.4. Persistent skin condition such as intertrigo in the inframammary fold that is unresponsive to medical management;
- **8.5.** Congenital breast deformity;
- 9.6. There is a reasonable likelihood that the <u>member/enrollee's</u> symptoms are primarily due to macromastia; and
- 10.7. The amount of breast tissue to be removed is reasonably expected to alleviate the symptoms.

## C.B. Gigantomastia of Pregnancy

- <u>1. The member Member</u>/enrollee has gigantomastia of pregnancy, accompanied by *any* of the following complications, and delivery is not imminent:
  - 1.a. Massive infection;
  - 2.b. Significant hemorrhage;
  - 3.c. Tissue necrosis with slough;
  - 4.d. Ulceration of breast tissue;
  - <u>5.e.</u> Intertriginous maceration or infection of the inframammary skin refractory to <u>medical</u> <u>managementdermatologic measures.</u>
- **II.** It is the policy of Louisiana Healthcare Connections that gynecomastia surgery is considered **medically necessary** when the criteria in A or B are met:
  - A. Adolescents < 18 years of age, all of the following:
    - 1. Adolescent membersOne of the following:
      - a. Gynecomastia persists more than one year after pathological causes are ruled out in adolescents with unilateral or bilateral grade II, III, or III gynecomastia (per Appendix C);
      - b. Gynecomastia persists more than six months after pathological causes are ruled out in adolescents with unilateral or bilateral grade IV gynecomastia (per Appendix C), and meets all of the following:);
    - 1. Persists for at least two years after pathological causes are ruled out;
    - 2. Persists without improvement after appropriate treatment for at least six months for any underlying cause, <u>as applicable</u>, including discontinuation of gynecomastia-inducing drugs and/or substances;
    - 3. ExperiencesPresence of pain and discomfort due to the distention and tightness from of the hypertrophied breast(s) that has not responded to medical management;
    - 4. Adult testicular size is attained-;
  - B. Adults  $\geq 18$  years, meets of age, all of the following:
    - 1. Unilateral or bilateral grade III or IV gynecomastia (per Appendix C);
    - 2. Glandular breast tissue is the primary cause of the gynecomastia;
    - 3. Persists for at least one yearmore than three months after pathological causes are ruled out;
    - 4. Persists without improvement after appropriate treatment for at least six months for any underlying cause, <u>as applicable</u>, including appropriate discontinuation of gynecomastia-inducing drugs and/or substances;
    - 5. Experiences Presence of pain and discomfort due to the distention and tightness from of the hypertrophied breast(s) that has not responded to medical management;
    - 6.5. Malignancy has been ruled out.

# CLINICAL POLICY Reduction Mammoplasty and Gynecomastia Surgery

## **Medical Record Documentation Requirements**

Medical records must accompany all requests for reduction mammoplasty <u>and gynecomastia</u> procedures. <u>Photographic documentation must be provided</u>, along with detailed documentation supporting the medical necessity of breast reduction, which <u>willshould</u> include height and weight information. —When applicable, there must be documented evidence of conservative therapies attempted <u>in order</u> to substantiate <u>that</u> the condition <u>beingis</u> refractory to treatment. <u>-Photographic documentation may be requested to support written documentation.<sup>4-5</sup></u>

#### **Background**

Reduction mammoplasty is the surgical reduction of breast size. -It was originally adopted in medical practice in the 1920s. The surgery was proposed as a means of alleviating physical problems associated with excessive breast size and breast ptosis. Among these problems are -pain -in -the -neck, upper and -lower back, shoulder, arm, and- breast; headaches; paresthesia of the upper extremities; intertrigo (inflammation of skin folds); itching; striae; difficulty exercising; postural changes; inability to find -appropriate -clothing; -bra -strap -grooving;- difficulty sleeping; and psychological illnesses including anxiety and depression. Radiographic evidence of chronic postural changes has also been demonstrated. -Reduction mammoplasty is also performed for many patients who request surgery to address breast deformities or asymmetry. 1.7

Several procedures are available to accomplish breast reduction.- Each procedure has its own unique approach to breast reshaping through various methods of skin incisions and resection patterns. Currently, the two surgical approaches to reduction mammoplasty that are most widely used are the Wise pattern reduction mammoplasty and vertical pattern breast reduction.— The Wise pattern reduction mammoplasty is most commonly used in the United States, and the vertical pattern breast reduction is more popular in Europe. Both are pedicle-based procedures, with the Wise pattern scars entirely below the nipple and the vertical pedicle scars above the nipple. A crescent-shaped mass of tissue is removed from the inferior portion of each breast, and the skin is resected and sutured. Both grafting and pedicle-based techniques are used in cases where it is necessary to reposition the nipple-areola complex. These procedures seek to preserve the blood and nerve supply to the nipple-areola complex and create a symmetrical and natural appearance, while reducing breast volume and weight. Care is also taken to avoid scars that may be visible when the patient is clothed. 1.7

Gestational gigantomastia is a rare clinical condition, characterized by rapid and disproportionate enlargement of the breasts during pregnancy. Patients present with massive enlargement of the breasts accompanied by possible thinning of the skin, tissue necrosis, infection, and hemorrhage. Treatment methods include medical therapy and surgery. When conservative treatment is ineffective or patients present with complications, (e.g., massive hemorrhage, ulceration, or breast necrosis), a surgical approach is indicated. Currently available surgical interventions are either breast reduction or mastectomy with delayed reconstruction.<sup>8</sup>

Gynecomastia is the benign proliferation of glandular breast tissue in those with a male reproductive system. Physiologic gynecomastia is common in newborns, adolescents, and in individuals with a male reproductive system those older than 50 years of age. In newborns and adolescents, it generally resolves spontaneously without intervention. In the older individuals with a male reproductive systemage group, decreasing free-testosterone levels can contribute to physiologic

## **CLINICAL POLICY Reduction Mammoplasty and Gynecomastia Surgery**

gynecomastia. -However, they arethis older age group is less likely to present for evaluation and treatment than adolescents. 9-10

Non-physiologic gynecomastia can occur at any age and can be a result of a medical condition, medication use, or substance abuse. -Persistent pubertal gynecomastia is the most common cause of non-physiologic gynecomastia. -It generally resolves six months to two years after onset.- However, if symptoms persist after two years, or after 17 years of age, further evaluation is needed to determine cause and appropriate treatment. -Medications such as antipsychotics, antiretrovirals, and prostate cancer therapies are common triggers, as well as non-prescription drugs such as performance-enhancing supplements and anabolic steroids. -Common medical conditions that can cause gynecomastia include Klinefelter's syndrome, adrenal tumors, brain tumors, chronic liver disease, androgen deficiency, endocrine disorders, and testicular tumors. -3,9-10

## Appendices Appendix A

Criteria for distinguishing Tanner stages 1 to 5 in those with a female reproductive system<sup>11</sup>:

Criteria for distinguishing Tanner stages 1 to 5 in those with a female reproductive system's			
<b>Tanner Stage</b>	Breast	Pubic Hair	
1	No palpable glandular tissue or pigmentation	No pubic hair; short,	
(Prepubertal)	of areola; elevation of areola only	fine villus hair only	
2	Glandular tissue palpable with elevation of	Sparse, long pigmented	
	breast and areola together as a small mound;	terminal hair chiefly along the	
	areola diameter increased	labia majora	
3	Further enlargement without separation of	Dark, coarse, curly hair,	
	breast and areola; although more darkly	extending sparsely over mons	
	pigmented, areola still pale and immature;		
	nipple generally at or above mid-plane of		
	breast tissue when individual is seated upright		
4	Secondary mound of areola and papilla above	Adult-type hair, abundant but	
	breast	limited to mons and labia	
5	Recession of areola to contour of breast;	Adult-type hair in quantity	
(Adult)	development of Montgomery's glands and	and distribution; spread to	
	ducts on the areola; further pigmentation of	inner aspects of the thighs in	
	areola; nipple generally below mid-plane of	most racial groups	
	breast tissue when individual is seated		
	upright; maturation independent of breast size		

## Appendix B

Adapted from Schnur Sliding Scale – body surface area and estimated minimum cutoff weight for breast tissue per breast to be removed.removed 12:

Body Surface Area (m²)	Weight of tissue to be removed per breast (grams)
1.35	199
1.40	218
1.45	238
1.50	260

Body Surface Area (m²)	Weight of tissue to be removed per breast (grams)	
1.55	284	
1.60	310	
1.65	338	
1.70	370

Body Surface Area (m²)	Weight of tissue to be removed per breast (grams)
1.75	404
1.80	441
1.85	482
1.90	527
1.95	575
2.00	628

Body Surface Area (m²)	Weight of tissue to be removed per breast (grams)
2.05	687
2.15	819
2.20	895
2.25	978
≥ 2.30	1000

## **Appendix C**

Gynecomastia Scale adapted from the McKinney and Simon, Hoffman and Kohn scalesscales<sup>5</sup>:

- I. Grade I: Small breast enlargement with localized button of tissue that is concentrated around the areola
- II. Grade II: Moderate breast enlargement exceeding areola boundaries with edges that are indistinct from the chest
- III. Grade III: Moderate breast enlargement exceeding areola boundaries with edges that are distinct from the chest with skin redundancy present
- IV. Grade IV: Marked breast enlargement with skin redundancy and feminization of the breast.

## **Coding Implications**

#### **Important Reminder**

This clinical policy has been developed by appropriately experienced and licensed health care professionals based on a review and consideration of currently available generally accepted standards of medical practice; peer-reviewed medical literature; government agency/program approval status; evidence-based guidelines and positions of leading national health professional organizations; views of physicians practicing in relevant clinical areas affected by this clinical policy; and other available clinical information. LHCC makes no representations and accepts no liability with respect to the content of any external information used or relied upon in developing this clinical policy. This clinical policy is consistent with standards of medical practice current at the time that this clinical policy was approved.

The purpose of this clinical policy is to provide a guide to medical necessity, which is a component of the guidelines used to assist in making coverage decisions and administering benefits. It does not constitute a contract or guarantee regarding payment or results. Coverage decisions and the administration of benefits are subject to all terms, conditions, exclusions and limitations of the coverage documents (e.g., evidence of coverage, certificate of coverage, policy, contract of insurance, etc.), as well as to state and federal requirements and applicable LHCC administrative policies and procedures.

This clinical policy is effective as of the date determined by LHCC. The date of posting may not be the effective date of this clinical policy. This clinical policy may be subject to applicable legal and regulatory requirements relating to provider notification. If there is a discrepancy between the effective date of this clinical policy and any applicable legal or regulatory requirement, the requirements of law and regulation shall govern. LHCC retains the right to change, amend or withdraw this clinical policy, and additional clinical policies may be developed and adopted as needed, at any time.

This clinical policy does not constitute medical advice, medical treatment or medical care. It is not intended to dictate to providers how to practice medicine. Providers are expected to exercise professional medical judgment in providing the most appropriate care, and are solely responsible for the medical advice and treatment of members/enrollees. This clinical policy is not intended to recommend treatment for members/enrollees. Members/enrollees should consult with their treating physician in connection with diagnosis and treatment decisions.

Providers referred to in this clinical policy are independent contractors who exercise independent judgment and over whom LHCC has no control or right of control. Providers are not agents or employees of LHCC.

This clinical policy is the property of LHCC. Unauthorized copying, use, and distribution of this clinical policy or any information contained herein are strictly prohibited. Providers, members/enrollees and their representatives are bound to the terms and conditions expressed

## Reduction Mammoplasty and Gynecomastia Surgery

herein through the terms of their contracts. Where no such contract exists, providers, members/enrollees and their representatives agree to be bound by such terms and conditions by providing services to members/enrollees and/or submitting claims for payment for such services.
