Please note: This policy is for medical benefit

Description

I

Pembrolizumab (Keytruda[®]) is a programmed death receptor-1 (PD-1)-blocking antibody.

Indication	Adults	Pediatrics
Melanoma	Х	Х
Non-small cell lung cancer	Х	
Head and neck squamous cell carcinoma	Х	
Classical Hodgkin lymphoma	Х	Х
Primary mediastinal large B-cell lymphoma	Х	Х
Urothelial carcinoma	Х	
Microsatellite instability-high (MSI-H) or mismatch repair deficient (dMMR) cancer (First-line treatment for colorectal cancer limited to adults.)	Х	Х
Bastric cancer	Х	
Esophageal cancer	Х	
Cervical cancer	Х	
Hepatocellular carcinoma	Х	
Biliary Tract Cancertract cancer	Х	
Merkel cell carcinoma	Х	Х
Renal cell carcinoma	Х	
Endometrial carcinoma	Х	
Tumor mutational burden-high (TMB-H) cancer	Х	X (excludes CNS tumor)
Cutaneous squamous cell carcinoma	Х	
Triple-negative breast cancer (TNBC)	Х	
Off-label uses		
Mycosis fungoides	Х	
Sezary syndrome	Х	
Anal carcinoma	Х	
Gestational trophoblastic neoplasia	Х	
Extranodal NK/T-cell lymphoma	Х	
Vulvar carcinoma	Х	
Adrenocortical carcinoma	Х	
Alveolar soft part sarcoma	Х

CLINICAL POLICY

Pembrolizumab

Indication	Adults	Pediatrics	
Thymic carcinoma	Х	•	Formatted: Body Text
Anaplastic large cell lymphoma	Х	4	Formatted: Body Text
Small cell lung cancer	Х	•	Formatted: Body Text
Kaposi Sarcomasarcoma	Х	•	Formatted: Body Text
Glioma		X	Formatted Table

*If a solid tumor is characterized as MSI-H/dMMR or TMB-H, see criteria at Sections I.G or I.N respectively.

Keytruda is indicated:

• Melanoma

- \circ $\;$ For the treatment of patients with unresectable or metastatic melanoma.
- For the adjuvant treatment of adult and pediatric (12 years and older) patients with Stage IIB, IIC, or III melanoma following complete resection.

Non-small cell lung cancer (NSCLC)

- In combination with pemetrexed and platinum chemotherapy, as first-line treatment of patients with metastatic nonsquamous NSCLC with no EGFR or ALK genomic tumor aberrations.
- In combination with carboplatin and either paclitaxel or paclitaxel protein-bound, as firstline treatment of patients with metastatic squamous NSCLC.
- As a single agent for the first-line treatment of patients with NSCLC expressing PD-L1 [Tumor Proportion Score (TPS) \geq 1%] as determined by an FDA-approved test, with no EGFR or ALK genomic tumor aberrations, and is:
 - Stage III where patients are not candidates for surgical resection or definitive chemoradiation, or
 - Metastatic.
- As a single agent for the treatment of patients with metastatic NSCLC whose tumors express PD-L1 (TPS ≥ 1%) as determined by an FDA-approved test, with disease progression on or after platinum-containing chemotherapy. Patients with EGFR or ALK genomic tumor aberrations should have disease progression on FDA-approved therapy for these aberrations prior to receiving Keytruda.
- o For the treatment of patients with resectable (tumors ≥ 4 cm or node positive) NSCLC in combination with platinum-containing chemotherapy as neoadjuvant treatment, and then continued as a single agent as adjuvant treatment after surgery.
- \circ As a single agent for the adjuvant treatment following resection and platinum-based chemotherapy for adult patients with Stage IB (T2a \ge 4 cm), II, or IIIA NSCLC.
- Head and neck squamous cell cancer (HNSCC)
 - In combination with platinum and fluorouracil (FU) for the first-line treatment of patients with metastatic or with unresectable, recurrent HNSCC.
 - As a single agent for the first line treatment of patients with metastatic or with unresectable, recurrent HNSCC whose tumors express PD-L1 [Combined Positive Score (CPS) ≥ 1] as determined by an FDA-approved test.
 - As a single agent for the treatment of patients with recurrent or metastatic HNSCC with disease progression on or after platinum containing chemotherapy.
- Classical Hodgkin lymphoma (cHL)
 - For the treatment of adult patients with relapsed or refractory cHL.

Formatted: Body Text Formatted: Font: 10 pt, Italic Formatted: Don't keep with next

- For the treatment of pediatric patients with refractory cHL, or cHL that has relapsed after 2 or more lines of therapy.
- Primary mediastinal large B-cell lymphoma (PMBCL)
 - For the treatment of adult and pediatric patients with refractory PMBCL, or who have relapsed after 2 or more prior lines of therapy.
 - Limitations of use: Keytruda is not recommended for treatment of patients with PMBCL who require urgent cytoreductive therapy.

• Urothelial carcinoma

- In combination with enfortumab vedotin for the treatment of adult patients with locally advanced or metastatic urothelial carcinoma-who are not eligible for cisplatin containing chemotherapy.*.
- As a single agent for the treatment of patients with locally advanced or metastatic urothelial carcinoma:
 - who are not eligible for any platinum-containing chemotherapy, or
 - who have disease progression during or following platinum-containing chemotherapy or within 12 months of neoadjuvant or adjuvant treatment with platinum-containing chemotherapy.
- As a single agent for the treatment of patients with Bacillus Calmette-Guerin (BCG)unresponsive, high-risk, non-muscle invasive bladder cancer (NMIBC) with carcinoma in situ (CIS) with or without papillary tumors who are ineligible for or have elected not to undergo cystectomy.
- Microsatellite instability-high (MSI-H) or mismatch repair deficient (dMMR) cancer
 - For the treatment of adult and pediatric patients with unresectable or metastatic, MSI-H or dMMR solid tumors, as determined by an FDA-approved test, that have progressed following prior treatment and who have no satisfactory alternative treatment options.
- Microsatellite instability-high or mismatch repair deficient colorectal cancer (CRC)
 - For the treatment of patients with unresectable or metastatic MSI-H or dMMR CRC as determined by an FDA-approved test.

Gastric cancer

- In combination with trastuzumab, fluoropyrimidine- and platinum-containing chemotherapy₇ for the first-line treatment of patients with locally advanced unresectable or metastatic HER2-positive gastric or gastroesophageal junction (GEJ) adenocarcinoma whose tumors express PD-L1 (CPS ≥ 1) as determined by an FDA-approved test.*
- In combination with fluoropyrimidine- and platinum-containing chemotherapy for the first-line treatment of adults with locally advanced unresectable or metastatic HER2negative gastric or GEJ adenocarcinoma.
- Esophageal cancer
 - For the treatment of patients with locally advanced or metastatic esophageal or GEJ (tumors with epicenter 1 to 5 centimeters above the GEJ) carcinoma that is not amenable to surgical resection or definitive chemoradiation either:
 - In combination with platinum- and fluoropyrimidine-based chemotherapy, or
 - As a single agent after one or more prior lines of systemic therapy for patients with tumors of squamous cell histology that express PD-L1 (CPS ≥ 10) as determined by an FDA approved test.
- Cervical cancer

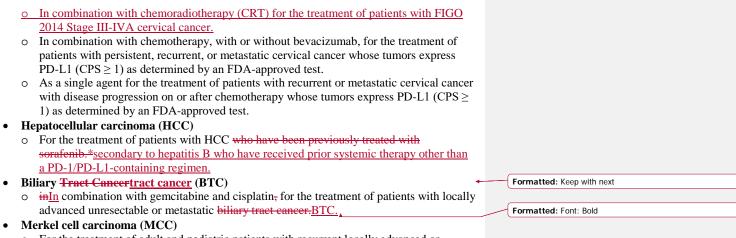

Formatted: Keep with next

Formatted: Indent: Left: 0.5", Bulleted + Level: 3 + Aligned at: 1" + Indent at: 1.25"

CLINICAL POLICY

Pembrolizumab

- o For the treatment of adult and pediatric patients with recurrent locally advanced or metastatic MCC.*.
- Renal cell carcinoma (RCC)
 - In combination with axitinib, for the first-line treatment of adult patients with advanced 0 RCC.
 - In combination with lenvatinib, for the first-line treatment of adult patients with advanced 0 RCC.
 - For the adjuvant treatment of patients with RCC at intermediate-high or high risk of 0 recurrence following nephrectomy, or following nephrectomy and resection of metastatic lesions.
- **Endometrial carcinoma**
 - In combination with lenvatinib, for the treatment of patients with advanced endometrial carcinoma that is mismatch repair proficient (pMMR) as determined by an FDAapproved test or not MSI-H, who have disease progression following prior systemic therapy in any setting and are not candidates for curative surgery or radiation.
 - o As a single agent for the treatment of patients with advanced endometrial carcinoma that is MSI-H or dMMR, as determined by an FDA-approved test, who have disease progression following prior systemic therapy in any setting and are not candidates for curative surgery or radiation.

Tumor mutational burden-high (TMB-H) cancer

- o For the treatment of adult and pediatric patients with unresectable or metastatic tumor mutational burden-high (TMB-H) [\geq 10 mutations/megabase (mut/Mb)] solid tumors, as determined by an FDA-approved test, that have progressed following prior treatment and who have no satisfactory alternative treatment options.*
- Limitations of use: The safety and effectiveness of Keytruda in pediatric patients with 0 TMB-H central nervous system cancers have not been established.
- Cutaneous squamous cell carcinoma (cSCC)
 - o For the treatment of patients with recurrent or metastatic cSCC or locally advanced cSCC that is not curable by surgery or radiation.
- Triple-negative breast cancer (TNBC)

Formatted: Font: Times New Roman

Formatted: Default

Page 4 of 28

- For the treatment of patients with high-risk early-stage TNBC in combination with chemotherapy as neoadjuvant treatment, and then continued as a single agent as adjuvant treatment after surgery.
- In combination with chemotherapy, for the treatment of patients with locally recurrent unresectable or metastatic TNBC whose tumors express PD-L1 (CPS ≥ 10) as determined by an FDA approved test.
- Adult cHL and adult PMBCL
 - For use at an additional recommended dosage of 400 mg every 6 weeks for cHL and PMBCL in adults.**

* This indication is approved under accelerated approval based on tumor response rate and durability of response. Continued approval for this indication may be contingent upon verification and description of clinical benefit in the confirmatory trials.

** This indication is approved under accelerated approval based on pharmacokinetic data, the relationship of exposure to efficacy, and the relationship of exposure to safety. Continued approval for this dosing may be contingent upon verification and description of clinical benefit in the confirmatory trials.

Policy/Criteria

louisiana healthcare connections

Provider must submit documentation (such as office chart notes, lab results or other clinical information) supporting that member has met all approval criteria.

It is the policy of Louisiana HealthCare Connections[®] that Keytruda is **medically necessary** when the following criteria are met:

I. Initial Approval Criteria Formatted: Keep with next A. Melanoma (must meet all): 1. Diagnosis of melanoma; 2. Prescribed by or in consultation with an oncologist; 3. Age \geq 12 years; 4. Disease is Stage IIB, IIC, III, recurrent, unresectable, or metastatic; 5. Prescribed as one of the following (a, b, or c): a. A single agent; b. In combination with Lenvima[®] or Yervoy[®]; c. In combination with Mekinist® and Trafinlar® for disease with BRAF V600 activating mutation; 6. Request meets one of the following (a or b):* a. Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks (for a maximum of 12 months if adjuvant treatment); b. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (prescriber must submit supporting evidence). *Prescribed regimen must be FDA-approved or recommended by NCCN. Approval duration: 6 months Medicaid 6 months B. Non-Small Cell Lung Cancer (must meet all): 1. Diagnosis of NSCLC; 2. Prescribed by or in consultation with an oncologist; 3. Age ≥ 18 years; One of the following (a or b): 4. a. Disease is resectable or resected; Disease is recurrent, advanced, or metastatic; 5.b.Request, and request meets one of the following (a, b, c, d, ei, ii, iii, iv, v, or fvi): Formatted a.i. Disease mutation status is negative for actionable biomarkers (EGFR, KRAS, Formatted: Indent: Left: 1", Hanging: 0.25" ALK, ROS1, BRAF, NTRK1/2/3, MET, RET, and ERBB2 [HER2]); b.ii. Disease mutation status is positive for EGFR S768I, L861Q, and/or G719X, and member has received prior afatinib, osimertinib, erlotinib, gefitinib, or dacomitinib;*

Page 6 of 28

afatinib, gefitinib, osimertinib, or dacomitinib;*

 $\underbrace{e,iii.}$ Disease mutation status is positive for EGFR exon 19 deletion or L858R, and member has received prior erlotinib \pm (ramucirumab or bevacizumab),

1

connections	
 d:<u>iv.</u> Disease mutation status is positive for ROS1 rearrangement, and member has received prior crizotinib, entrectinib, or ceritinib;* e:<u>v.</u> Disease mutation status is positive for ALK rearrangement, and member has received prior crizotinib, ceritinib, alectinib, brigatinib, or lorlatinib;* 	
f.viDisease mutation status is positive for EGFR exon 20, KRAS G12C, NRTK1/2/3, -BRAF V600E, MET exon 14 skipping, RET rearrangement, or ERBB2 (HER2);	
*Prior authorization may be required	Formatted: Indent: First line: 0.25"
6.5. Keytruda is prescribed in one of the following ways (a, b, c, d, or de):	
a. For PD-L1 positive disease (TPS $\geq 1\%$);	
b. In combination with a chemotherapy regimen (see Appendix B);	
c. In combination with a chemotherapy regimen (see Appendix B) as neoadjuvant	
treatment, followed by single-agent adjuvant treatment after surgery for patients	
with resectable (tumors ≥ 4 cm or node positive) disease;	
e.d. As single-agent continuation maintenance therapy if previously given first line as	
part of a chemotherapy regimen;	
d.e. As single-agent adjuvant treatment following resection and platinum-based	
chemotherapy (e.g., cisplatin, carboplatin) for adult patients with stage IB (T2a \geq	
4 cm), II, or IIIA disease;	
7.6.Member does not have contraindications to PD-1/PD-L1 inhibitor therapy (e.g.,	
Opdivo [®] , Yervoy, Tecentriq [®] , Imfinzi [®]) (see Appendix F);	
8.7. Request meets one of the following (a or b):*	
a. Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a	
maximum duration of one of the following (i, ii, or iii):	
i. 24 months;	
ii. 12 months if adjuvant treatment;	
iii. 12 weeks if neoadjuvant treatment, followed by 39 weeks of adjuvant	
treatment;	
b. Dose is supported by practice guidelines or peer-reviewed literature for the	
relevant off-label use (prescriber must submit supporting evidence).	
*Prescribed regimen must be FDA-approved or recommended by NCCN.	
Approval duration: 6 months	
C. Head and Neck Squamous Cell Carcinoma (must meet all):	Formatted: Indent: Left: 0.25", Don't keep with next
1. Diagnosis of HNSCC (locations include paranasal sinuses, larynx, pharynx, lip, oral	romatica. macht. Lent. 0.25 , Don't keep with hext
<i>cavity, salivary glands; may be occult primary – i.e., primary source unknown);</i>	
 Prescribed by or in consultation with an oncologist; 	
2. Trescribed by of in consultation with an oncologist, $2 = A \cos 2 \frac{18}{100}$ volume.	

- 3. Age \geq 18 years;
- 4. Disease is unresectable, recurrent, or metastatic;
- 5. Keytruda is prescribed in one of the following ways (a, b, or c):
 - a. In combination with platinum-containing chemotherapy and either FU, docetaxel, or gemcitabine;
 - b. As a first-line single agent and the tumor expresses PD-L1 with a CPS of ≥ 1 ;
 - c. As a single agent for disease that has progressed on or after platinum-containing chemotherapy (e.g., cisplatin, carboplatin);
- 6. Request meets one of the following (a or b):*

Page 7 of 28

- a. Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 24 months;
- b. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (*prescriber must submit supporting evidence*).
- *Prescribed regimen must be FDA-approved or recommended by NCCN.
- Approval duration: 6 months

D. Classical Hodgkin Lymphoma (must meet all):

- 1. Diagnosis of cHL;
- 2. Prescribed by or in consultation with an oncologist or hematologist;
- 3. Age \geq 6 months;
- 4. Keytruda is prescribed as single-agent therapy (*adults or pediatrics*) or in combination with GVD (gemcitabine, vinorelbine, liposomal doxorubicin) (*adults only*) in one of the following ways (a, b, c, or d):
 - a. After hematopoietic stem cell transplant;
 - b. For disease that is refractory to ≥ 1 line of systemic therapy (*see Appendix B*);
 - c. Age \geq 18 years: For disease that has relapsed after \geq 1 line of systemic therapy (*see Appendix B*);
 - d. Age ≥ 6 months to < 18 years: For disease that has relapsed after ≥ 2 lines of systemic therapy (*see Appendix B*);
- 5. Request meets one of the following (a, b, or c):*
 - a. Adults: Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 24 months;
 - Pediatrics: Dose does not exceed 2 mg/kg up to 200 mg every 3 weeks for a maximum of 24 months;
 - c. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (*prescriber must submit supporting evidence*).
 - *Prescribed regimen must be FDA-approved or recommended by NCCN.

Approval duration: 6 months

E. Primary Mediastinal Large B-Cell Lymphoma (must meet all):

- 1. Diagnosis of PMBCL;
- 2. Prescribed by or in consultation with an oncologist or hematologist;
- 3. Age \geq 6 months;
- Disease is refractory to or has relapsed after ≥ 1 line of systemic therapy (see Appendix B);
- 5. Prescribed in one of the following ways (a or b):
 - a. As a single agent;
 - b. For age ≥ 6 months to < 18 years only, in combination with Adcetris[®];
- 6. Request meets one of the following (a, b, or c):*
 - a. Adults: Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 24 months;
 - b. Pediatrics: Dose does not exceed 2 mg/kg up to 200 mg every 3 weeks for a maximum of 24 months;
 - c. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (*prescriber must submit supporting evidence*).

*Prescribed regimen must be FDA-approved or recommended by NCCN.

Formatted: Indent: Left: 0.75"

Page 8 of 28

Approval duration: <u>6 months</u>

- F. Urothelial Carcinoma (must meet all):
 - 1. Diagnosis of urothelial carcinoma;
 - 2. Prescribed by or in consultation with an oncologist or urologist;
 - 3. Age \geq 18 years;
 - 4. Keytruda is prescribed in one of the following ways (a, b, or c):
 - a. In combination with Padcev[®] for locally advanced or metastatic disease, and member is not eligible for cisplatin containing chemotherapy; :
 - b. As a single agent for locally advanced or metastatic disease, and member is ineligible for or has previously received platinum-containing chemotherapy (e.g., cisplatin, carboplatin);
 - c. As a single agent for the treatment of BCG-unresponsive, high-risk, NMIBC with CIS, and member is ineligible for or has elected not to undergo cystectomy (*see Appendix D for BCG shortage information*);
 - 5. Request meets one of the following (a or b):*
 - a. Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 24 months;
 - b. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (*prescriber must submit supporting evidence*). **Prescribed regimen must be FDA-approved or recommended by NCCN*.
 - Approval duration: 6 months

G. Microsatellite Instability-High/Mismatch Repair Deficient Cancer (must meet all):

- 1. Diagnosis of a solid tumor classified as MSI-H or dMMR (indicative of MMR gene mutation or loss of expression) (see Appendix E for examples of MSI-H solid tumors);
- 2. Prescribed by or in consultation with an oncologist;
- 3. Member meets one of the following (a or b):
 - a. Age ≥ 6 months to < 18 years and request is not for first-line therapy;
 b. Age ≥ 18 years;
- 4. Keytruda is prescribed in one of the following ways (a or b):
 - a. As first-line or subsequent therapy for ampullary adenocarcinoma, CRC, gallbladder cancer, <u>gastric cancer, GEJ cancer, intrahepatic/extrahepatic</u> cholangiocarcinoma, non--nasopharyngeal head and neck cancer, occult primary tumor, pancreatic adenocarcinoma, or small bowel adenocarcinoma;
 b. As subsequent therapy for other solid tumors;
- 5. Prescribed as a single agentin one of the following ways (a or b):
 <u>a.</u> As a single agent:
 <u>b.</u> For gastric or GEJ cancers: as a single agent or in combination with platinum- and
- fluoropyrimidine-based chemotherapy;
- 6. Request meets one of the following (a, b, or c):*
 a. Adults: Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 24 months;
 - b. Pediatrics: Dose does not exceed 2 mg/kg up to 200 mg every 3 weeks for a maximum of 24 months;

c. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (*prescriber must submit supporting evidence*).
 *Prescribed regimen must be FDA-approved or recommended by NCCN.
 Approval duration: 6 months

H. Gastric Cancer, Esophageal Cancer, or Gastroesophageal Junction <u>AdenocarcinomaCancer</u> (must meet all):

- Adenocarcinoma Cancer (must meet all):
- 1. Diagnosis of gastric cancer, esophageal cancer, or GEJ adenocarcinomacancer;
- 2. Prescribed by or in consultation with an oncologist;
- 3. Age \geq 18 years;
- 4. Disease is unresectable, locally advanced, recurrent, or metastatic;
- 5. Keytruda is prescribed in one of the following ways (a, b, or bc):
- a. In combination with trastuzumab, fluoropyrimidine- and platinum-containing chemotherapy, and both (i and ii):
 - i. HER2-positive gastric or GEJ adenocarcinoma;
 - ii. Tumor expresses PD-L1 (CPS \geq 1);
 - a.<u>b.or-In combination with platinum</u>- and fluoropyrimidine-based chemotherapy;<u>, and either (i or ii)</u>:
 - i. HER2-negative gastric or GEJ adenocarcinoma;
 - ii. Esophageal carcinoma or GEJ squamous cell carcinoma;
- **b.c.** As a single agent after one or more prior lines of systemic therapy for patientsmembers with tumors of squamous cell histology<u>GEJ</u> that express PD-L1 (CPS ≥ 10) (see Appendix B);
- Request meets one of the following (a or b):*
 - a. Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 24 months;
 - b. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (prescriber must submit supporting evidence).
 *Prescribed regimen must be FDA-approved or recommended by NCCN.

Approval duration: 6 months

I. Cervical Cancer (must meet all):

- 1. Diagnosis of cervical cancer;
- 2. Prescribed by or in consultation with an oncologist;
- 3. Age \geq 18 years;
 - 4.<u>i. Tumor expresses PD L1 (CPS \geq 1);</u>
- 5.4.Prescribed in one of the following ways (a, b, or bc):
 - a. As a single agent, and (i, ii, and iiii):
 - i. Tumor expresses PD-L1 (CPS \geq 1);
 - <u>i-ii.</u>Disease is recurrent or metastatic;
 - <u>iii.</u> Disease has progressed on or after ≥ 1 line of systemic therapy (see Appendix B);
 - b. In combination with chemotherapy (e.g., paclitaxel/cisplatin, paclitaxel/carboplatin) with or without bevacizumab, and (<u>i and ii</u>):
 i. Tumor expresses PD-L1 (CPS ≥ 1);
 - <u>+ii.</u> Disease is persistent, recurrent, or metastatic;
 - c. In combination with CRT, and (i):

CLINICAL POLICY

Disease is FIGO 2014 Stage III-IVA (see Appendix F); 6.5. Request meets one of the following (a or b):* a. Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 24 months; b. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (prescriber must submit supporting evidence). *Prescribed regimen must be FDA-approved or recommended by NCCN. Approval duration: 6 months J. Hepatocellular Carcinoma (must meet all): 1. Diagnosis of HCC; 2. Prescribed by or in consultation with an oncologist; 3. Age \geq 18 years;

- 4. One of the following (a or b):
- 4. Disease is classified as Child Pugh Class A and has progressed on or after therapy with Nexavar[®], Lenvima[®], or, Stivarga[®];
 - a. *Prior authorization may be required for Nexavar, Lenvima,[®], or Cabometyx[®], and both of the following (i and Stivargaii):
 - i. Disease is classified as Child-Pugh Class A;
 - Member has not previously been treated with immune checkpoint inhibitor 5.ii. therapy (PD-L1/PD-1, e.g., Tecentriq, Opdivo);
 - *Prior authorization may be required for Nexavar, Lenvima and Stivarga
 - b. Prescribed as first line treatment;
- 6.5. Prescribed as a single agent;
- 7.6.Request meets one of the following (a or b):*
 - a. Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 24 months;
 - b. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (prescriber must submit supporting evidence). *Prescribed regimen must be FDA-approved or recommended by NCCN.
- Approval duration: 6 months

K. Biliary Tract Cancer (must meet all):

- 1. Diagnosis of BTC;
- 2. Prescribed by or in consultation with an oncologist;
- 3. Age ≥ 18 years;
- 4. Disease is locally advanced <u>unresectable</u> or metastatic;
- 5. Patient is BTC-treatment naïve;
- 5. Prescribed in one of the following ways (a or b):
 - a. In combination with gemcitabine and cisplatin; 6.b.In combination with Lenvima as subsequent treatment for gallbladder cancer or cholangiocarcinoma;
- 7.6.Request meets one of the following (a or b):*
 - a. Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 24 months:
 - b. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (prescriber must submit supporting evidence).

i.-Disease is pMMR or not MSI-H;

- *See criteria set I.G. for MSI-H/dMMR endometrial carcinoma
- ii. Progressed following prior systemic therapy (e.g., carboplatin/paclitaxel);b. In combination with carboplatin and paclitaxel for recurrent or Stage III-IV
- tumor;
- 5. Request meets one of the following (a or b):*
 - a. Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 24 months;
 - b. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (prescriber must submit supporting evidence).
 *Prescribed regimen must be FDA-approved or recommended by NCCN.

Approval duration: 6 months

O. Tumor Mutational Burden-High Cancer (must meet all):

- 1. Diagnosis of a solid tumor classified as TMB-H (i.e., ≥ 10 mutations/megabase [mut/Mb]) (see Appendix E for examples of TMB-H solid tumors);
- 2. Prescribed by or in consultation with an oncologist;
- 3. Age \geq 6 months;
- 4. Disease is unresectable or metastatic;
- 5. One of the following (a or b):
 - a. Disease has progressed following prior treatment;
 - b. Prescribed as a first-line therapy for ampullary adenocarcinoma or pancreatic adenocarcinoma;
- 6. Prescribed as a single agent;
- 7. Request meets one of the following (a, b, or c):*
 - a. Adults: Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 24 months;
 - Pediatrics: Dose does not exceed 2 mg/kg up to 200 mg every 3 weeks for a maximum of 24 months;
 - c. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (*prescriber must submit supporting evidence*).
 - *Prescribed regimen must be FDA-approved or recommended by NCCN.
- Approval duration: 6 months

P. Cutaneous Squamous Cell Carcinoma (must meet all):

- 1. Diagnosis of cSCC;
- 2. Prescribed by or in consultation with an oncologist;
- 3. Age ≥ 18 years;
- 4. Member is not a candidate for curative surgery or radiation;
- 5. Prescribed as a single agent;
- 6. Request meets one of the following (a or b):*
 - a. Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 24 months;
 - b. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (*prescriber must submit supporting evidence*).
 *Prescribed regimen must be FDA-approved or recommended by NCCN.

- Q. Triple Negative Breast Cancer (must meet all):
 - 1. Diagnosis of TNBC (i.e., estrogen receptor/progesterone receptor [ER/PR] negative and human epidermal growth factor receptor 2 [HER2]-negative);
 - 2. Prescribed by or in consultation with an oncologist;
 - 3. Age \geq 18 years;
 - 4. One of the following (a or b):
 - a. Disease is high-risk early-stage (see Appendix F), and:
 - i. Prescribed in combination with chemotherapy (e.g., carboplatin, paclitaxel, doxorubicin, cyclophosphamide) as neoadjuvant treatment, and then continued as a single agent as adjuvant treatment after surgery;
 - b. Disease is locally recurrent unresectable or metastatic, and both of the following (i and ii):
 - i. Tumor expresses PD-L1 (CPS \geq 10);
 - ii. Prescribed in combination with chemotherapy (e.g., paclitaxel, paclitaxel protein-bound, gemcitabine and carboplatin);
 - 5. Request meets one of the following (a or b):*
 - a. Dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of (i or ii):
 - High-risk, early-stage TNBC: 24 weeks as neoadjuvant therapy and 27 weeks as adjuvant therapy;
 - ii. Locally recurrent unresectable or metastatic TNBC: 24 months;
 - b. Dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (prescriber must submit supporting evidence).
 *Prescribed regimen must be FDA-approved or recommended by NCCN.

Approval duration: 6 months

R. Glioma (off-label) (must meet all):

- 1. Diagnosis of hypermutant tumor diffuse high-grade glioma;
- 2. Prescribed by or in consultation with an oncologist;
- 3. Age \geq 6 months and < 18 years;
- 4. Dose is within FDA maximum limit for any FDA-approved indication or is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (prescriber must submit supporting evidence).* *Prescribed regimen must be FDA-approved or recommended by NCCN.

Approval duration: 6 months

S. NCCN Recommended Uses (off-label) (must meet all):

- 1. Diagnosis of one of the following (a or b):
 - a. Keytruda is prescribed as first-line or subsequent therapy:
 - i. Stage IIB or III mycosis fungoides;
 - ii. Stage IV Sezary syndrome;
 - iii. Unresectable or metastatic adrenocortical carcinoma;
 - iv. Alveolar soft part sarcoma;
 - v. Metastatic or unresectable thymic carcinoma, and prescribed as a single agent;
 - b. Keytruda is prescribed as single-agent subsequent therapy:

- i. Metastatic anal carcinoma, and member has not previously received Keytruda or Opdivo;
- ii. Gestational trophoblastic neoplasia;
- iii. Extranodal NK/T-cell lymphoma;
- iv. Advanced, recurrent, or metastatic PD-L1-positive (CPS \geq 1) vulvar carcinoma:
- Relapsed or refractory cutaneous anaplastic large cell lymphoma; v.
- vi. Relapsed or primary progressive small cell lung cancer;
- vii. Endemic or classic Kaposi Sarcoma;
- 2. Prescribed by or in consultation with an oncologist;
- 3. Age ≥ 18 years;
- 4. Dose is within FDA maximum limit for any FDA-approved indication or is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (prescriber must submit supporting evidence).* *Prescribed regimen must be FDA-approved or recommended by NCCN.

Approval duration: 6 months

- T. Other diagnoses/indications (must meet 1 or 2):
 - 1. If this drug has recently (within the last 6 months) undergone a label change (e.g., newly approved indication, age expansion, new dosing regimen) that is not yet reflected in this policy, refer to LA.PMN.255
 - 2. If the requested use (e.g., diagnosis, age, dosing regimen) is NOT specifically listed under section III (Diagnoses/Indications for which coverage is NOT authorized) AND criterion 1 above does not apply, refer to the off-label use policy LA.PMN.53

II. Continued Therapy

- A. All Indications in Section I (must meet all):
 - 1. Currently receiving medication via Louisiana Healthcare Connections benefit, or documentation supports that member is currently receiving Keytruda for a covered indication and has received this medication for at least 30 days;
 - 2. Member is responding positively to therapy;
 - 3. If request is for a dose increase, request meets one of the following (a, b, or c):*
 - a. Adults (i, ii, iii, iv, or v):
 - i. Melanoma: New dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks (for a maximum of 12 months if adjuvant treatment);
 - ii. High-risk, early-stage TNBC: New dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 24 weeks as neoadjuvant therapy and 27 weeks as adjuvant therapy;
 - iii. RCC monotherapy: New dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 12 months;
 - iv. NSCLC: New dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum duration of one of the following (a, b, or bc): a) 24 months;
 - b) 12 months if adjuvant treatment;

Formatted: Font color: Auto

Formatted: Pattern: Clear

Page 15 of 28

- c) 12 weeks if neoadjuvant treatment, followed by 39 weeks of adjuvant treatment;
- v. All other FDA-approved indications: New dose does not exceed 200 mg every 3 weeks or 400 mg every 6 weeks for a maximum of 24 months;
- b. Pediatrics (i or ii):
 - i. cHL, PMBCL, MSI-H or dMMR cancer, MCC, TMB-H cancer: New dose does not exceed 2 mg/kg up to 200 mg every 3 weeks for a maximum of 24 months;
 - ii. Melanoma: New dose does not exceed 2 mg/kg up to 200 mg every 3 weeks for a maximum of 12 months;
- c. New dose is supported by practice guidelines or peer-reviewed literature for the relevant off-label use (*prescriber must submit supporting evidence*).
 *Prescribed regimen must be FDA-approved or recommended by NCCN.
- Approval duration: 12 months

B. Other diagnoses/indications (must meet 1 or 2):

- 1. If this drug has recently (within the last 6 months) undergone a label change (e.g., newly approved indication, age expansion, new dosing regimen) that is not yet reflected in this policy, refer to LA.PMN.255
- 2. If the requested use (e.g., diagnosis, age, dosing regimen) is NOT specifically listed under section III (Diagnoses/Indications for which coverage is NOT authorized) AND criterion 1 above does not apply, refer to the off-label use policy LA.PMN.53

III. Diagnoses/Indications for which coverage is NOT authorized:

- A. Non-FDA approved indications, which are not addressed in this policy, unless there is sufficient documentation of efficacy and safety according to the off label use policy LA.PMN.53
- B. Pediatric patients with MSI-H or TMB-H central nervous cancers.

IV. Appendices/General Information

Appendix A: Abbreviation/Acronym Key	
ALK: anaplastic lymphoma kinase	HER2: human epidermal growth factor
BCG: Bacillus Calmette-Guerin	receptor 2
BTC: biliary tract cancer	HNSCC: head and neck squamous cell
cHL: classical Hodgkin lymphoma	carcinoma
CIS: carcinoma in situ	MCC: Merkel cell carcinoma
CNS: central nervous system	MSI-H: microsatellite instability-high
CPS: combined positive score	mut/Mb: mutations/megabase
CRC: colorectal cancer	NCCN: National Comprehensive Cancer
CRT: chemoradiotherapy	Network
cSCC: cutaneous squamous cell carcinoma	NMIBC: non-muscle invasive bladder
dMMR: mismatch repair deficient	cancer
EGFR: epidermal growth factor receptor	NSCLC: non-small cell lung cancer
FDA: Food and Drug Administration	PD-1: programmed death protein 1
GEJ: gastroesophageal junction	PD-L1: programmed death-ligand 1

HCC: hepatocellular carcinoma

Formatted: Indent: Left: 0"

PMBCL: primary mediastinal large B-cell lymphoma pMMR: mismatch repair proficient RCC: renal cell carcinoma ROS1: ROS proto-oncogene 1 TMB-H: tumor mutational burden-high TNBC: triple-negative breast cancer TPS: tumor proportion score

Appendix B: Therapeutic Alternatives

This table provides a listing of preferred alternative therapy recommended in the approval criteria. The drugs listed here may not be a formulary agent_and may require prior authorization.

Drug Name	Dosing Regimen	Dose Limit/ Maximum Dose	
 Section I.B: Non-Small Cell Lung Cancer Examples of drugs used in combination with Keytruda: Carboplatin, cisplatin, pemetrexed, paclitaxel Examples of targeted therapies: EGFR S768I, L861Q, and/or G719X targeted therapies: afatinib, osimertinib, erlotinib, gefitinib, dacomitinib EGFR exon 19 deletion or L858R targeted therapies: erlotinib ± (ramucirumab or bevacizumab), afatinib, gefitinib, osimertinib, dacomitinib ROS1 targeted therapies: erizotinib17eytruda17b, entrectinib, ceritinib ALK rearrangement targeted therapies: erizotinib17eytruda17b, lorlatinib 	Varies	Varies <i>«</i>	Formatted Table

Appendix C: Contraindications/Boxed Warnings None reported

Appendix D: Keytruda Therapy for Urinary Bladder CIS in the Event of a BCG Shortage
 National Comprehensive Cancer Network (NCCN) information and recommendations:

- National Comprehensive Cancer Network (NCCN) information and recommendations:
 Standard urinary bladder CIS therapy includes lesion resection followed by intravesical BCG.
- The NCCN advises that in the event of a BCG shortage, BCG should be prioritized for induction of high-risk patients (e.g., high-grade T1 and CIS) and that, if feasible, the dose of BCG may be split (1/3 or $\frac{1/2!/2}{2}$ dose) so that multiple patients may be treated with a single vial in the event of a shortage.
- If BCG is unavailable, the NCCN recommends the following alternatives:

Page 19 of 28

- Intravesical chemotherapy agents as first-line and subsequent therapy (e.g., gemcitabine, mitomycin, epirubicin, valrubicin, docetaxel, sequential gemcitabine/docetaxel, gemcitabine/mitomycin);
- Initial radical cystectomy if patient is a surgical candidate.
- The NCCN recommendations do not include off-label use of Keytruda as first-line or subsequent therapy in the absence of BCG failure.
- In its BCG June 2020 supply update sent to providers, Merck confirms a path forward to expand BCG manufacturing but cautions that the expansion could take years to fully realize. Merck directs providers to their wholesalers and distributors for supply questions and also provides its National Service Center number (800-672-6372) for additional information.

Appendix E: Examples of Solid Tumors per Pivotal Trials by "N" (descending)

Appendix F: General Information

• High-risk early-stage TNBC was defined as tumor size > 1 cm but ≤ 2 cm in diameter with nodal involvement or tumor size > 2 cm in diameter regardless of nodal involvement in the pivotal KEYNOTE-522 study.

Page 20 of 28

- Although Keytruda's approval for small cell lung cancer was withdrawn due to lack improvement in overall survival in phase 3 randomized trial data, the NCCN continues to recommend this use, stating that "pembrolizumab [is] just as effective as, and sometimes better than, the other subsequent therapy options."
- Per NCCN, contraindications for treatment with PD-1/PD-L1 inhibitors may include active or previously documented autoimmune disease and/or current use of immunosuppressive agents, or presence of an oncogene (i.e., EGFR exon 19 deletion or exon 21 L858R, ALK rearrangements), which has been shown to be associated with less benefit.
- FIGO 2014 Stage III-IVA cervical cancer is defined as tumor involvement of the lower vagina with or without extension onto pelvic sidewall or hydronephrosis/non-functioning kidney or has spread to adjacent pelvic organs.

Important Reminder

This clinical policy has been developed by appropriately experienced and licensed health care professionals based on a review and consideration of currently available generally accepted standards of medical practice; peer-reviewed medical literature; government agency/program approval status; evidence-based guidelines and positions of leading national health professional organizations; views of physicians practicing in relevant clinical areas affected by this clinical policy; and other available clinical information. LHCC makes no representations and accepts no liability with respect to the content of any external information used or relied upon in developing this clinical policy. This clinical policy is consistent with standards of medical practice current at the time that this clinical policy was approved.

The purpose of this clinical policy is to provide a guide to medical necessity, which is a component of the guidelines used to assist in making coverage decisions and administering benefits. It does not constitute a contract or guarantee regarding payment or results. Coverage decisions and the administration of benefits are subject to all terms, conditions, exclusions and limitations of the coverage documents (e.g., evidence of coverage, certificate of coverage, policy, contract of insurance, etc.), as well as to state and federal requirements and applicable LHCC administrative policies and procedures.

This clinical policy is effective as of the date determined by LHCC. The date of posting may not be the effective date of this clinical policy. This clinical policy may be subject to applicable legal and regulatory requirements relating to provider notification. If there is a discrepancy between the effective date of this clinical policy and any applicable legal or regulatory requirement, the requirements of law and regulation shall govern. LHCC retains the right to change, amend or withdraw this clinical policy, and additional clinical policies may be developed and adopted as needed, at any time.

This clinical policy does not constitute medical advice, medical treatment or medical care. It is not intended to dictate to providers how to practice medicine. Providers are expected to exercise professional medical judgment in providing the most appropriate care, and are solely responsible for the medical advice and treatment of members. This clinical policy is not intended to recommend treatment for members. Members should consult with their treating physician in connection with diagnosis and treatment decisions.

Providers referred to in this clinical policy are independent contractors who exercise independent judgment and over whom LHCC has no control or right of control. Providers are not agents or employees of LHCC.

This clinical policy is the property of LHCC. Unauthorized copying, use, and distribution of this clinical policy or any information contained herein are strictly prohibited. Providers, members and their representatives are bound to the terms and conditions expressed herein through the terms of their contracts. Where no such contract exists, providers, members and their representatives agree to be bound by such terms and conditions by providing services to members and/or submitting claims for payment for such services.
