1.0 INTRODUCTION

To implement the Batch Standard for Pharmacy Encounters, the NCPDP Batch Standard Implementation Guide Version 1.1 is used. Since the Batch Standard uses the data elements, parsing routine and many of the rules of the Telecommunication Standard,

The following are used:

- Telecommunication Standard Implementation Guide (for transactions, segments, fields, rules)
- Data Dictionary (for field definitions and formats)
- External Code List (for field values)

These documents are available to NCPDP members at the Standards Download page http://www.ncdpd.org/members/members_download.aspx. Information on becoming an NCPDP member which includes all documents published is available at <http://www.ncdpd.org/signup.aspx>.

The Batch Standard uses the same syntax, formatting, data set, and rules as the real time Telecommunication Standard. The Batch Standard “wraps” the Telecommunication Standard around a detail record, adding a batch header and trailer.

The Batch, consisting of Header, Detail Data Records, and Trailer are formed into a batch file.

The Transaction Header Segment contains fixed length fields. The rest of the segments in the request (such as Patient Segment, Insurance Segment, Claim Segment, Response Status Segment, Response Claim Segment, Etc.) are variable segments with variable fields (where applicable) and variable field lengths.

Two acknowledgement transactions for each transmission will be returned. The first acknowledgement, in TA1 format, acknowledges receipt of the transmission. If errors are reported in this acknowledgement they must be corrected and the transmission file re-submitted. The second acknowledgement is a report, in html format, that will detail any syntax, semantic or companion guide specific errors. If errors are reported in this acknowledgement they must be corrected and the transmission file re-submitted using a different 806-5C Batch number to avoid a duplicate transmission condition.

2.0 GENERAL INFORMATION

The following restrictions or qualifications apply:

1. Submitters using the Medicaid Batch Pharmacy system are required to transmit their encounter files through our sFTP site.
2. All records must be completed according to the record specifications in this manual. All appropriate data validity and relationship edits are expected to be performed before a transaction is generated.
3. New paid encounters, resubmitted encounters that were denied by Louisiana Medicaid, or encounter reversals (Voids) can be submitted via Batch using the .NCP file extension.
4. Denied encounters that were denied by the MCO can be submitted via Batch using the .NCD file extension. Submitted MCO denied encounters files must only contain MCO denied encounters.

3.0 POLICIES AFFECTING SUBMISSIONS

The following policies are in addition to those outlined in the provider handbook and in no way supersede those publications:

1. The required edits, submission standards, and data specifications as outlined in this manual must be fulfilled and maintained by all submitters transmitting encounters through batch pharmacy.
2. At any time, an authorized representative of the Louisiana Medicaid program, the Attorney General, U.S. Department of Health and Human Services, the General Accounting Office, or their agents or assignees can request supportive documentation to ensure that all requirements are met (e.g., program listings, flowcharts, file descriptions, accounting procedures). At any time, the regulatory agents listed above can request actual information used to bill Louisiana Medicaid encounters through batch pharmacy (e.g., provider files, recipient files, reference files, pricing files) whether maintained on physical media such as a computer listing or stored on a machine readable media such as magnetic tape. All information thus obtained will be held in strictest confidence.
3. All information supplied by the Department of Health and Hospitals (DHH) or Molina Medicaid Solutions within the computing and accounting systems of a submitter (e.g., master files, provider files, recipient files, reference files, and statistical data) can be used only in the accurate accounting of encounters containing or referencing that information. Any redistribution or dissemination of that information for any purpose other than the accurate accounting of Medicaid encounters is considered an illegal use of confidential information.
4. At any time, DHH or Molina Medicaid Solutions can choose to review any or all encounters received through batch pharmacy and can reject or disallow any encounter subsequent to such review.
5. DHH or Molina Medicaid Solutions reserves the right to view the processing of Medicaid encounters. This consists of an on-site check or validation of edit requirements through utilization of DHH or Molina Medicaid Solutions test encounters with embedded errors.

4.0 BATCH PHARMACY COMMUNICATIONS SPECIFICATIONS

4.1 File Transmission Protocols

- Submitters must transmit batch pharmacy encounter files through sFTP. Please refer to the sFTP companion guide for details.

- Submitters may submit up to 10 NCPDP encounter batched transaction files per day.
- Each file may contain no more than 20,000 encounters.
- Submitters may submit up to 60,000 encounters per day

5.0 TRANSACTION SYNTAX CONVENTIONS

Following is a list of the data elements, field names, and field positions for batch pharmacy encounters.

For multiple prescription encounters, the Patient and Insurance segments are included only once per Transaction (G1) record and the other segments (Claim, COB, Pricing ...) are repeated for each prescription.

Standard COBOL documentation is used for transaction descriptions. The following definitions are given to ensure consistency of interpretation:

- **FIELD** - The NCPDP data element number for a given transaction.
- **FIELD NAME** - The short definition, name, or literal constant of the data located within the transaction at the positions indicated.
- Transaction sections comprising fixed and optional portions are kept separate with the use of a Segment Separator character (HEX 1E). In addition to the Segment Separator character, the Group Separator character (HEX 1D) is used before the Claim Segment.
- **PICTURE (PIC)** -The COBOL "PICTURE" clause that describes how the data is presented on the transmission.

X = an alphanumeric character

9 = a numeric character

S = the field is signed (+ or -)

V = an implied decimal point

() = The character in front of the left parentheses is repeated the number of times between the parentheses, i.e., X(5) represents the same PICTURE as XXXXX.

- **TYPE** - The type of data in the field.

A/N - Alphanumeric - Always left-justified and space filled.

A - Alphabetic characters only – Always left-justify and space filled as needed.

N - Numeric

- **COMMENTS OR FROM/TO**

- **FROM** - The beginning physical character position of the field.

- **TO** - The last physical character position of the field.

- **NCPDP Requirement** – This field indicates how the data element is labeled in the NCPDP implementation guide.
- **DHH Requirement** – This field indicates if the data in this field is needed for the encounter to process correctly.
- **Designation Legend:**
 - M Mandatory – The field is mandatory for the Segment/Transaction. Mandatory elements have structural requirements.
 - R Required – The field must be present.
 - Q Qualified Requirement – The situations designated have qualifications for usage.
 - O Optional – The field is conditional. In the future, this field could be required.
- **Comments** – This field offers explanations for the data requirements.

6.0 BATCH PHARMACY ENCOUNTER RECORD FORMATS

Encounter Submissions consist of Encounter Requests and Encounter Reversals/voids.

COMPOUND SEGMENT: Optional Segment (Required if field 406-D6 Compound Code is indicated as a compound with a value of 2)

Only one transaction per transmission is allowed when billing for a multi-ingredient prescription. A Compound is submitted using the Compound segment with multiple iterations of the Compound Product ID Qualifier, Compound Product ID and other repeating fields – one iteration for each ingredient in the compound. This transaction allows the pharmacy to submit any/all of the ingredients included in the preparation of the compound. Each ingredient of a compound is contained within the iterations of the Compound Segment **within a transaction**. Each ingredient is **not allowed** to be sent in separate transactions of a transmission.

COB Reporting Instructions

Please use the following instructions for the sequence required to report COB data in NCPDP Batch Encounters:

- First COB Occurrence: MCO reporting the total amount paid as what the PBM paid the Pharmacy in **COB Segment field 431-DV of the NCPDP Encounter using 342-HC qualifier 07**. MCO Copay amount charged to the recipient is also reported in 1st COB occurrence using 351-NP Other Payer-Patient Responsibility Amount Qualifier 05, and 352-NQ Other Payer-Patient Responsibility Amount, report zero if no copay was charged.
- Second COB Occurrence: Report the Primary TPL paid amount, if applicable, in COB Segment 431-DV of the NCPDP Encounter using 342-HC qualifier 07 to report the Drug Benefit amount not including Sales Tax. Primary TPL copay does not need to be reported in the encounter. If the pharmacy doesn't provide the LA Medicaid TPL Carrier Code for Other Insurance on Pharmacy Claim records sent to the PBM, then a default value of 000000 should be used as the 340-7C (Other Payer ID) value in the NCP Encounter record.
- Third COB Occurrence: Report the amount of Sales Tax for the TPL paid amount, if applicable, in COB Segment 431-DV of the NCPDP Encounter using 342-HC qualifier 10 to report the Sales Tax amount paid.

****Note:** Subtract all taxes and provider fees paid by the primary payer before calculating the maximum allowable cost when the MCO is the secondary payer. Taxes and provider fees paid by the primary payer should not be included in the amount considered for reimbursement.

MCO ICN Format

The MCO's ICN must be populated in field 993-A7 (Internal Control Number). The maximum number of characters that the FI can store is 30, which includes the 4-digit prefix. The ICN that the MCO transmits in this segment is echoed back to the submitter in the 835. This permits the MCO to use the value in this field as a key in their system to match the encounter back to the information returned in the 835 transaction.

DHH requires MCOs to modify their ICN to contain a 4-digit prefix as follows:

Character 1: Claim Submission Media Type

- “P” to indicate submission of claim via paper form
- “Q” to indicate submission of a value added service via paper form
- “E” to indicate submission of claim via electronic submission
- “F” to indicate submission of value added service via electronic submission
- “W” to indicate the submission of claim via web portal
- “V” to indicate the submission of value added service submitted via web portal.

NOTE: The MCO must provide a Data Dictionary if other media types are submitted.

Character 2: Claim Status

The MCO, and/or sub-contractor, must indicate the status of the claim for this character position as follows:

- “P” for paid encounters
- “D” for denied encounters

NOTE: The MCO, and/or sub-contractor, must indicate the status of the claim for this character position.

Character 3-4: Vendor (Sub-contractor) Information

The MCO determines a two character code for each of its vendors. The MCO must provide DHH with a Data Dictionary to identify the two character code and the full name of the vendor it represents. As vendors are added or deleted, DHH must be furnished with an updated Data Dictionary.

COB Reporting Instructions

Please use the following instructions for the sequence required to report COB data in NCPDP Batch Encounters:

- First COB Occurrence: MCO reporting the total amount paid as what the PBM paid the Pharmacy in **COB Segment field 431-DV of the NCPDP Encounter using 342-HC qualifier 07**. MCO Copay amount charged to the patient is also reported in 1st COB occurrence using 351-NP Other Payer-Patient Responsibility Amount Qualifier 05, and 352-NQ Other Payer-Patient Responsibility Amount, report zero if no copay was charged.
- Second COB Occurrence: Report the Primary TPL paid amount, if applicable, in COB Segment 431-DV of the NCPDP Encounter using 342-HC qualifier 07 to report the Drug Benefit amount not including Sales Tax. Primary TPL copay does not need to be reported in the encounter. If the pharmacy doesn't provide the LA Medicaid TPL Carrier Code for Other Insurance on Pharmacy Claim records sent to the PBM, then a default value of 000000 should be used as the 340-7C (Other Payer ID) value in the NCP Encounter record.
- Third COB Occurrence: Report the amount of Sales Tax for the TPL paid amount, if applicable, in COB Segment 431-DV of the NCPDP Encounter using 342-HC qualifier 10 to report the Sales Tax amount paid.

****Note:** Subtract all taxes and provider fees paid by the primary payer before calculating the maximum allowable cost when the MCO is the secondary payer. Taxes and provider fees paid by the primary payer should not be included in the amount considered for reimbursement.

MCO ICN Format

The MCO's ICN must be populated in field 993-A7 (Internal Control Number). The maximum number of characters that the FI can store is 30, which includes the 4-digit prefix. The ICN that the MCO transmits in this segment is echoed back to the submitter in the 835. This permits the MCO to use the value in this field as a key in their system to match the encounter back to the information returned in the 835 transaction.

DHH requires MCOs to modify their ICN to contain a 4-digit prefix as follows:

Character 1: Claim Submission Media Type

- “P” to indicate submission of claim via paper form
- “Q” to indicate submission of a value added service via paper form
- “E” to indicate submission of claim via electronic submission
- “F” to indicate submission of value added service via electronic submission
- “W” to indicate the submission of claim via web portal
- “V” to indicate the submission of value added service submitted via web portal.

NOTE: The MCO must provide a Data Dictionary if other media types are submitted.

Character 2: Claim Status

The MCO, and/or sub-contractor, must indicate the status of the claim for this character position as follows:

- “P” for paid encounters
- “D” for denied encounters

NOTE: The MCO, and/or sub-contractor, must indicate the status of the claim for this character position.

Character 3-4: Vendor (Sub-contractor) Information

The MCO determines a two character code for each of its vendors. The MCO must provide DHH with a Data Dictionary to identify the two character code and the full name of the vendor it represents. As vendors are added or deleted, DHH must be furnished with an updated Data Dictionary.
