

State of Louisiana
Louisiana Department of Health
Health Standards Section

TO: All Hospice Providers

FROM: Cecile Castello, RN, Deputy Assistant Secretary, Health Standards Section

SUBJECT: Guidance for Infection Control and Prevention Concerning Coronavirus Disease 2019 by Hospice Agencies

DATE: March 10, 2020

Guidance for Infection Control and Prevention Concerning Coronavirus Disease 2019 (COVID-19) by Hospice Agencies

The Louisiana Department of Health/Health Standards Section encourages all Hospice Agencies to monitor the CDC website for updated information and resources and contact the Louisiana Office of Public Health when needed (CDC Resources for Health Care Facilities: <https://www.cdc.gov/coronavirus/2019-ncov/healthcare-facilities/index.html>).

The contact information for the Louisiana Office of Public Health is 800-256-2748

CMS regulations and guidance support Hospice Agencies taking appropriate action to address potential and confirmed COVID cases and mitigate transmission including screening, treatment, and transfer to higher level care (when appropriate). This guidance applies to both Medicare and Medicaid providers.

Hospice Agencies should regularly monitor the CDC website (see links below) for information and contact their local health department when needed (<https://www.cdc.gov/coronavirus/2019-ncov/whats-new-all.html>). Also, hospice agencies should be monitoring the health status of patients, residents, visitors, volunteers, and staff under their care setting for signs or symptoms of COVID-19. Per CDC, prompt detection, triage and isolation of potentially infectious patients are essential to prevent unnecessary exposures among patients, healthcare personnel, and visitors at the facility. For exposed staff, hospice agencies should consider frequent monitoring for potential symptoms of COVID-19 as needed throughout the day.

In addition to the overarching regulations and guidance, we have provided the following information (Frequently Asked Questions) about some specific areas related to COVID-19:

Which patients are at risk for severe disease from COVID-19?

Based upon CDC data, older adults, those with underlying chronic or life-limiting medical conditions such as hospice patients are presumed to be at greater risk of poor outcomes when infected with novel coronavirus.

Refer to the CDC guidance for people at higher risk: <https://www.cdc.gov/coronavirus/2019-ncov/specific-groups/high-risk-complications.html>

How should providers screen visitors and patients for COVID-19 in a Hospice that provides short-term inpatient care directly or in an inpatient unit of another facility?

Hospices should identify volunteers, visitors and patients at risk for having COVID-19 infection before or immediately upon arrival to the inpatient unit. They should be asked about the following:

1. International travel within the last 14 days to countries with sustained community transmission. For updated information on affected countries visit: <https://www.cdc.gov/coronavirus/2019-ncov/travelers/index.html>
2. Signs or symptoms of a respiratory infection, such as a fever, cough, and sore throat.
3. In the last 14 days, has had contact with someone with or under investigation for COVID-19, or are ill with respiratory illness.
4. Residing in a community where community-based spread of COVID-19 is occurring.

For patients with respiratory symptoms, implement respiratory hygiene and cough etiquette (i.e., placing a facemask over the patient's nose and mouth) and isolate the patient in a private room with the door closed. If the patient cannot be immediately moved to a private location, ensure they are not allowed to wait among other patients who reside in the inpatient unit. Identify a separate, well-ventilated space that allows patients to be separated by 6 or more feet, with easy access to respiratory hygiene supplies.

Medicare requires Hospice Agencies to provide appropriate medical supplies for respiratory hygiene and cough etiquette, including 60%-95% alcohol-based hand sanitizer (ABHS), tissues, no touch receptacles for disposal, facemasks, and tissues at healthcare facility entrances.

Inform infection prevention and control services, local and state public health authorities, and other healthcare facility staff as appropriate about the presence of a person under investigation (PUI) for COVID-19. For hospice patients with symptoms, determination about whether or not to conduct diagnostic testing versus presuming a positive COVID-19 diagnosis (based on his/her symptoms and exposure) should be a decision among the patient, patient representative, hospice agency and state and local public health authority. Additional guidance for evaluating patients in

U.S. for COVID-19 infection can be found on the CDC [COVID-19 website](#).

How should hospice programs monitor or restrict health care staff or hospice volunteers

The same screening performed for patients and visitors should be performed for hospice staff and volunteers.

- Health care providers (HCP) and volunteers who have signs and symptoms of a respiratory infection should not report to work.
- Anyone that develop signs and symptoms of a respiratory infection while on-the-job, should:
 - Immediately stop work, put on a facemask, and self-isolate at home;
 - Inform the hospice's infection control manager/team to include information on individuals, equipment, and locations the person came in contact with; and
 - Contact and follow the local health department recommendations for next steps (e.g., testing, locations for treatment).
- Refer to the CDC guidance for exposures that might warrant restricting asymptomatic healthcare personnel or volunteers from reporting to work (<https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-risk-assesment-hcp.html>).

When a hospice patient is in an inpatient unit, what are recommended infection prevention and control practices, including considerations for patient placement, when evaluating and care for a patient with known or suspected COVID-19?

Recommendations for patient placement and other detailed infection prevention and control recommendations are available in the <https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html>.

Consider, where appropriate allowing certain types of volunteer activities to be performed via phone or other electronic devices to minimize risk of exposure in the event of a suspected or positive COVID-19 case.

Do hospice patients with known or suspected COVID-19 infection require hospitalization?

Hospice patients and/or their families should carefully discuss care options with the hospice team to ensure the goals and wishes of hospice patient are respected consistent with patient rights requirements. Patients can be managed at home if the patient is stable, the environmental exposure to COVID-19 to others in the household can be minimized, and if there are appropriate infection control precautions made and PPE available.

Patients whose symptoms are exacerbated by COVID-19 and cannot be adequately managed in the home setting, should be transferred to a hospice inpatient unit. More information is available here: <https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-home-care.html>.

When is it safe to discontinue Transmission-based Precautions inpatient hospice patients with COVID-19?

The decision to discontinue [Transmission-Based Precautions](#) for hospitalized patients with COVID-19 should be made on a case-by-case basis in consultation with clinicians, infection prevention and control specialists, and public health officials. This decision should consider disease severity, illness signs and symptoms, and results of laboratory testing for COVID-19 in respiratory specimens.

Currently, negative RT-PCR results from at least 2 consecutive sets of nasopharyngeal and throat swabs collected at least 24 hours apart are needed before discontinuing Transmission-Based Precautions. A total of four negative specimens are needed to meet this requirement.

More detailed information about criteria to discontinue Transmission-Based Precautions are available here: <https://www.cdc.gov/coronavirus/2019-ncov/hcp/disposition-hospitalized-patients.html>.

When is it safe to discontinue in-home isolation for in home hospice patients with COVID- 19?

The decision should be made on a case-by-case basis in consultation with clinicians and public health officials. This decision should consider disease severity, illness signs and symptoms, and results of laboratory testing for COVID-19 in respiratory specimens. Guidance for discontinuation of in-home isolation precautions is the same as that to discontinue Transmission-Based Precautions for hospitalized patients with COVID-19.

For more information, see: <https://www.cdc.gov/coronavirus/2019-ncov/hcp/disposition-in-home-patients.html>

Considerations to discontinue in-home isolation include all of the following:

- Resolution of fever, without use of antipyretic medication
- Improvement in illness signs and symptoms
- Negative results of an FDA Emergency Use Authorized molecular assay for COVID-19 from at least two consecutive sets of paired nasopharyngeal and throat swabs specimens collected ≥ 24 hours apart (total of four negative specimens— two nasopharyngeal and two throat).

See [Interim Guidelines for Collecting, Handling, and Testing Clinical Specimens from Patients Under Investigation \(PUIs\) for 2019 Novel Coronavirus \(2019-nCoV\)](#) for specimen collection guidance. Check the CDC website very frequently as specimen collection and testing guidances are ever evolving.

Can hospices restrict visitation of patients (in-patient unit provided directly by the hospice)?

Medicare regulations require a hospice to focus on preventing and controlling infections. Hospices may have policies regarding the visitation rights of patients and may wish to set clinical restrictions on visitation subject to patient's rights. If the inpatient hospice is not provided by the hospice itself (such as a hospital), that provider may have established additional visitation restrictions associated with that setting to address COVID-19 transmission concerns.

What are the considerations when caring for a hospice patient in their home?

For hospice patients with known or suspected COVID-19 who remain in their homes, there are a number of infection prevention and control practices that should be followed. The CDC advises the patient to stay home except to get medical care, separate yourself from other people and animals in the home as much as possible (in a separate room with the door closed), call ahead before visiting your doctor, and wear a facemask in the presence of others when out of the patient room.

For everyone in the home, CDC advises covering coughs and sneezes followed by washing your hands or using an alcohol-based hand rub, not sharing personal items (dishes, eating utensils, bedding) with individuals with known or suspected COVID-19, cleaning all "high-touch" surfaces everyday, and monitoring your symptoms.

Please see: <https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-prevent-spread.html>

CMS regulations also require that hospice agencies provide the types of necessary supplies and equipment required by the individualized plan of care. For a patient with COVID-19, this would include supplies for respiratory hygiene and cough etiquette, including 60%-95% alcohol-based hand sanitizer (ABHS). However, given supply shortages, State and Federal surveyors should not cite hospice agencies for not providing certain supplies (e.g., personal protective equipment (PPE) such as gowns, N95 respirators, surgical masks and alcohol-based hand rubs (ABHR)) if they are having difficulty obtaining these supplies for reasons outside of their control. However, we do expect providers/suppliers to take actions to mitigate any resource shortages and show they are taking all appropriate steps to obtain the necessary supplies as soon as possible.

What Personal Protective Equipment should hospice staff routinely use when visiting the the home of a patient suspected of COVID-19 exposure or confirmed exposure?

If care provided to symptomatic patients who are confirmed or presumed to be COVID-19 positive is anticipated, then Hospice Agencies should refer to the CDC Interim Infection Prevention and Control Recommendations for Patients with Confirmed Coronavirus Disease 2019 (COVID-19) or Persons Under Investigation for COVID-19 in Healthcare Settings: <https://www.cdc.gov/coronavirus/2019-ncov/infection-control/control-recommendations.html>

Health care professionals who enter the room of a patient with known or suspected COVID-19 should adhere to Standard Precautions and use a facemask or respirator, gown, gloves, and eye protection. When available, respirators (instead of facemasks) are preferred; they should

be prioritized for situations where respiratory protection is most important and the care of patients with pathogens requiring airborne precautions (TB, measles, varicella)

What are the considerations for discharge to a subsequent care location for hospice patients with COVID-19?

The decision should be made based on the clinical condition of the patient including careful consultation with the patient, patient representatives and/or their family, and understanding their individual needs and goals of care. If Transmission-Based Precautions must be continued in the subsequent setting, the receiving facility must be able to implement all recommended infection prevention and control recommendations. Be sure the transportation team is aware that the patient has confirmed COVID-19.

Although COVID-19 patients with mild symptoms may be managed at home, the decision to discharge to home should consider the patient's ability to adhere to isolation recommendations, as well as the potential risk of secondary transmission to household members with immunocompromising conditions. More information is available here:

<https://www.cdc.gov/coronavirus/2019-ncov/hcp/guidance-home-care.html>.

If hospice care is provided in a nursing home, we have advised nursing homes that hospice workers should be allowed entry provided that hospice staff is following the appropriate CDC guidelines for Transmission-Based Precautions, and using PPE properly.
