

Health Alert Network Message 21-40: FDA Authorizes Refrigerator Storage of Thawed, Undiluted Pfizer-BioNTech COVID-19 Vaccine for Up to 1 Month, Making Vaccine More Widely Available

Origination Date:
May 20, 2021

Revision Dates (List All Revision Dates):

FDA Authorizes Up to A Month for Refrigerator Storage of Thawed Pfizer-BioNTech COVID-19 Vaccine Prior to Dilution, Making Vaccine More Widely Available:

May 20, 2021

Making COVID-19 vaccines widely available is key to getting people vaccinated and bringing the pandemic to an end. Pfizer Inc. submitted data to the FDA to support storage of undiluted, thawed vials of its COVID-19 vaccine for up to one month at refrigerator temperatures. This change should make this vaccine more widely available to the American public by facilitating the ability of vaccine providers, such as community doctors' offices, to receive, store, and administer the vaccine.

However, providers should always be aware of the expiration date of the vaccine, as it may expire before the 30-day storage allowance.

Additional Information

- Based on a review of recent data submitted by Pfizer Inc. today, the U.S. Food and Drug Administration is authorizing undiluted, thawed Pfizer-BioNTech COVID-19 Vaccine vials to be stored in the refrigerator at 2°C to 8°C (35°F to 46°F) for up to 1 month. Previously, thawed, undiluted vaccine vials could be stored in the refrigerator for up to 5 days.
- Pfizer Inc. submitted data to the FDA to demonstrate that undiluted, thawed vials of its COVID-19 vaccine are stable at refrigerator temperatures for up to 1 month.
- The updated [Fact Sheet for Healthcare Providers Administering Vaccine](#) (Vaccination Providers) is intended to help frontline workers understand the revised storage time. The Fact Sheet is available on the FDA's web site.
