FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system stated during the sanitary survey that they have water quality issues dealing with iron and manganese. The system is currently using a flushing program to navigate iron and manganese issues. This Office recommends that the system run tests to determine iron and manganese levels in different parts of the system to potentially find the source of the problem. The system should also seek out various treatment techniques such as softening, filtration, sequestration, or oxidation to reduce iron and manganese levels in the system.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED STORAGE TANK	Finished Water Storage	This office recommends that all tanks be cleaned and inspected on a 3 to 5 year schedule.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services  
Northeast Region VIII  
Attn: Tyler Lollis,  
1650 Desiard St., 2<sup>nd</sup> Floor  
Monroe, Louisiana 71201

The following compliance history is provided for your information:

### **Bacteriological Sampling History**

#### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

### **Violation History**

#### **Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

#### **Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 318-361-7210.

Respectfully,

A handwritten signature in cursive script, appearing to read "Tyler Lollis".

Ruston, LA 71270

Re: Class I Sanitary Survey  
Wesley Chapel Water System Public Water System  
PWS ID LA1061020  
Lincoln Parish, Louisiana

Dear Ms. Forbes:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 31, 2018 sanitary survey inspection of the public water supply system for Wesley Chapel Water System (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

Name	Organization
Tyler Lollis	LDH/OPH Engineering Services
Rory Dobbs	LDH/OPH Engineering Services
Jerry Robinson	Wesley Chapel Water System
Will Neeles	Wesley Chapel Water System

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

Office of Public Health • Northeast Region VIII

1650 Desiard Street • P. O. Box 6118 • Monroe, Louisiana 71211-6118

Phone #: 318-361-7201 • Fax #: 318-362-3163 • [www.ldh.la.gov](http://www.ldh.la.gov)  
"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

No unresolved observations were recorded in this category.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK #1	Finished Water Storage	At the time of inspection, no lock or cover was present on the access ladder for the ground storage tank. Prevent unauthorized access to the ladder with a lock and cover, or remove the bottom portion of the ladder when not in use.
FACILITY	CATEGORY	FINDINGS
1061020-001 - EAST WELL #1	Source	At the time of inspection, there seemed to be a small drip leak from underneath the discharge piping insulation near the air release-vacuum relief valve. Find the source of the leak and repair it to prevent possible contamination into the discharge piping.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was noted during inspection of the monthly chlorine residual reports that roughly one or two days per month, the water system fell underneath the required 0.5 ppm of free chlorine in the distribution system and did not log an explanation of the appropriate actions taken. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Please send the Region 8 office a copy of the next three months (November/December 2018 & January 2019) of properly recorded chlorine forms.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	One of the water system point of entry taps (POE-004) was located on Elevated Tank No. 3 (EL003 - Mt. Zion Road). The water system must have a sample tap that adequately represents the water served to customers and is located such that it draws directly from the water main before the first customer. Relocate the point of entry tap off of the elevated tank.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED #1	Finished Water Storage	The elevated tank is not equipped with a pressure gauge or other means to monitor the water level in the tank. At the time of inspection, the tank functioned on a float system to control the water level. A pressure gauge or other means of measuring the water level in the elevated tank must be installed.

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK #1	Finished Water Storage	The overflow pipe for the ground storage tank terminated less than 12 inches above the ground surface. The overflow shall terminate at an elevation between 12 and 24 inches above the ground surface and discharge over a drainage structure or splash pad. Bring the overflow up to 12 to 24 inches above the ground surface.
FACILITY	CATEGORY	FINDINGS
TP001 - EAST WELL #1	Treatment	The light inside the chlorine building was broken. Replace the bulb or wiring so the light is functioning properly.
FACILITY	CATEGORY	FINDINGS
TP003 - WELL #3 SOUTH - WS OFFICE POC	Treatment	There is no wiring for a light inside the chlorine building. Properly install a light with electrical wiring inside the chlorine building.
FACILITY	CATEGORY	FINDINGS
TP004 - TP WELL # 4 - NULL RD EL POC	Treatment	The chlorine bottle vent did not have a screen. Install an insect-mesh screen on the end of the chlorine bottle vent line.
FACILITY	CATEGORY	FINDINGS
1061020-001 - EAST WELL #1	Source	<p>At the time of inspection, the paint on the well discharge piping and casing showed signs of flaking and cracking. Paint protects the well discharge piping from pitting, corrosion, and future leaks. Clean and paint the well discharge piping.</p> <p>The pressure gauge on the well discharge piping was broken at the time of inspection. The discharge piping shall be equipped with a working pressure gauge upstream of the check valve. Replace the pressure gauge.</p>
FACILITY	CATEGORY	FINDINGS
1061020-003 - WELL #3 SOUTH	Source	<p>At the time of inspection, the paint on the well discharge piping and casing showed signs of flaking and cracking. Paint protects the well discharge piping from pitting, corrosion, and future leaks. Clean and paint the well discharge piping.</p> <p>The well casing vent did not terminate at least 24 inches above ground level. All potable water well vents shall be constructed to be at least 24 inches above the highest flood level, but in no cases less than 24 inches above the ground surface. Raise the vent opening to be at least 24 inches above the ground surface and terminate in a downward direction, covered by a non-corrodible insect mesh screen.</p>
FACILITY	CATEGORY	FINDINGS
1061020-004 - WELL #4	Source	At the time of inspection, the paint on the well discharge piping and casing showed signs of flaking and cracking. Paint protects the well discharge piping from pitting, corrosion, and future leaks. Clean and paint the well discharge piping.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and

include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was noted during inspection that the water system did not compare monthly water production to water sold to estimate monthly water loss. Analysis of water loss is important to quantify leaks in the distribution system or other inferences.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was noted during inspection that the water system did not have a flushing program. A flushing program is necessary to limit stagnant water and water quality issues within the distribution system, especially in systems with many dead ends in the mains.
FACILITY	CATEGORY	FINDINGS
TP001 - EAST WELL #1	Treatment	The chlorine building is not fitted with a shatter resistant inspection window. Install a shatter resistant inspection window for the chlorine room.
FACILITY	CATEGORY	FINDINGS
TP003 - WELL #3 SOUTH - WS OFFICE POC	Treatment	The chlorine building is not fitted with a shatter resistant inspection window. Install a shatter resistant inspection window for the chlorine room.
FACILITY	CATEGORY	FINDINGS
TP004 - TP WELL # 4 - NULL RD EL POC	Treatment	The chlorine building is not fitted with a shatter resistant inspection window. Install a shatter resistant inspection window for the chlorine room.
FACILITY	CATEGORY	FINDINGS
TP005 - TP WELL # 5	Treatment	The chlorine building is not fitted with a shatter resistant inspection window. Install a shatter resistant inspection window for the chlorine room.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED #1	Finished Water Storage	Some slight erosion was noted near the concrete pad by the tank inlet. Monitor the spot to ensure it does not become an issue with the tank foundation. This Office recommends that the hole be filled in to ground level.

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED #1	Finished Water Storage	This Office recommends that storage tanks be cleaned and inspected on a 3 to 5 year schedule.
FACILITY	CATEGORY	FINDINGS
EL003 - ELEVATED #3	Finished Water Storage	This Office recommends that storage tanks be cleaned and inspected on a 3 to 5 year schedule.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK #1	Finished Water Storage	This Office recommends that storage tanks be cleaned and inspected on a 3 to 5 year schedule.

## 7.1 Financial Question Set

01/31/2017

<b>PWS Name:</b>	WESLEY CHAPEL WATER SYSTEM, INC		
<b>PWS ID:</b>	#1061020	<b>Date:</b>	October 29, 2018

1. Are individual customers charged for water usage either through a metered or flat rate?  METERED
2. Has the system raised water rates in the past five years?  YES EFFECTIVE – FEBRUARY 2017
3. Is the water system's income sufficient to cover all operating costs?  YES
4. Does the water system have an annual operating budget?  YES
5. Is there a reserve fund to draw upon for emergencies and major equipment replacement in regard to the water system?  YES
6. Does the water system have an annual capital improvements budget?  NO
7. Is there a separate set of accounting records which record the financial activities of the water system (revenues collected, expenses paid, assets and liabilities)?  YES
8. Does the system routinely track water loss?  NO
9. Does the system know the quantities of water produced and sold on a daily basis?  YES

Use additional sheets and/or documentation as necessary. Within 60 days of the survey's completion, FAX or email the completed form along with any supporting documentation to the DWRLF.

Re: Class I Sanitary Survey  
COLYELL COMMUNITY WATER Public Water System  
PWS ID LA1063003  
LIVINGSTON Parish

Dear Taylor:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the November 15, 2018 sanitary survey inspection of the public water supply system for COLYELL COMMUNITY WATER (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Angela Gomez	LDH OPH Region 9 Engineering
Donald Wheat	Colyell Community Water Assoc.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

Office of Public Health • Southeast Region IX

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of inspection, a leak was noted on the discharge line. All potable water systems shall be designed, constructed and maintained so as to prevent leakage of water due to defective materials, improper jointing, corrosion, settling, impacts, freezing, or other causes <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
1063003-002 - WELL #2,COLYELL COMM.WATER	Source	At the time of inspection, the electrical wiring for the submersible pump was exposed. There shall be no pathway for contamination into the well casing and/or discharge piping. <b>See Attachment #2</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the Hach colorimeter was not working. Replace or repair the colorimeter to accurately record chlorine residuals.
FACILITY	CATEGORY	FINDINGS
HD002 - HYDROPNEUMATIC #2	Finished Water Storage	At the time of inspection, the hydropneumatic appeared to show some corrosion and mildew. All storage tanks must be cleaned, painted, and maintained to ensure proper protection of metal surfaces. <b>See Attachment #6</b>
FACILITY	CATEGORY	FINDINGS
GR003 - GROUND #3	Finished Water Storage	At the time of inspection, the overflow on the ground storage was not provided with twenty-four mesh non-corrodible screen. If a flapper valve is used, a screen shall be provided inside the valve. <b>See Attachment #5</b>

FACILITY	CATEGORY	FINDINGS
TP003 - WELL #3 TREATMENT PLANT	Treatment	At the time of inspection, the ventilating fan was not working. Each room where chlorine gas is used shall have a ventilating fan with capacity which provides one complete air change per minute.
FACILITY	CATEGORY	FINDINGS
TP002 - WELL #2 TREATMENT PLANT	Treatment	At the time of inspection, the ventilating fan was not working. Each room where chlorine gas is used shall have a ventilating fan with capacity which provides one complete air change per minute.
FACILITY	CATEGORY	FINDINGS
1063003-003 - WELL #3 COLYELL COMMUNITY WATER	Source	At the time of inspection, the well casing showed signs of rust. The well casing, as all well appurtenances, must be protected from physical damage, including that from corrosion. <b>See Attachment #3</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, it appeared to show signs of corrosion on the distribution line. <b>See Attachment #4</b>

FACILITY	CATEGORY	FINDINGS
TP003 - WELL #3 TREATMENT PLANT	Treatment	At the time of inspection, weighing scales were not working properly. Refer to 40 CFR 141.403 and TSS 5.1.2.f.1. and TSS 5.1.2.f.4
FACILITY	CATEGORY	FINDINGS
TP002 - WELL #2 TREATMENT PLANT	Treatment	At the time of inspection, weighing scales were not working properly. Refer to 40 CFR 141.403 and TSS 5.1.2.f.1. and TSS 5.1.2.f.4

Office of Public Health • Southeast Region IX

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
1063004-003 - RODEO WELL	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. At the time of inspection a valve in the distribution system was leaking. See Attachment #2

### Deficiencies

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE 4-H CLUB	Finished Water Storage	40 CFR 141.403 and TSS 7.3.3 - Adequate controls shall be provided to maintain levels in distribution system storage structures. Level indicating devices should be provided at a central location. At the time of inspection, the water level indicator on the tank was not functional. See Attachment #3

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP003 - RODEO WELL TREATMENT PLANT	Treatment	40 CFR 141.403 and TSS 5.1.10.d - Chemical solutions shall be kept covered. Large tanks with access openings shall have such openings curbed and fitted with overhanging covers. At the time of inspection the polyphosphate tanks were uncovered. See Attachment #4

LIVINGSTON Parish

Dear Mayor Watson:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 25, 2018 sanitary survey inspection of the public water supply system for WALKER WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

**Name**

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

**No observations were recorded in this category.**

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
1063017-003 - WELL 003 CORBIN	Source	There was no flow meter on the well discharge pipe at the time of inspection. A flow meter is required for the well discharge pipe.
FACILITY	CATEGORY	FINDINGS
1063017-002 - WELL 002 PENDARVIS	Source	There was no flow meter on the well discharge pipe at the time of inspection. A flow meter is required for the well discharge pipe.
FACILITY	CATEGORY	FINDINGS
1063017-004 - WELL 004 TOWER WELL	Source	There was no flow meter on the well discharge pipe at the time of inspection. A flow meter is required for the well discharge pipe.

**The significant deficiencies listed in the above table titled ‘Significant Deficiencies’ must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LIVINGSTON Parish

Dear Mr. Samrow:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 31, 2018 sanitary survey inspection of the public water supply system for RIVER PINES PLANTATION UTILITIES (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The monitoring plan portal has been returned to the PWS for corrections and/or updates to be made. Corrections to 911 addresses and/or sufficient information for unfamiliar person to find the sampling site. Once corrections are made resend sampling plan to DHH for review and approval for sanitary survey deficiency to be corrected. Please, notify this office of the corrected monitoring plan and when it is ready for review.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	It was noted that a threaded faucet without a HBVB was observed at TCR site-004. There shall be no physical connection between a public water supply and any other water supply which is not of equal sanitary quality. All threaded faucets need to have vacuum breakers or be removed. Additionally, A cross connection control program is not being implemented by the water system. A formal cross connection program must be implemented. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
1063018-001 - RIVER PINES EAST WELL (OLD)	Source	At the time of inspection, Well # 1 was equipped with a sample tap on the well discharge line located downstream of the check valve. The sample tap should be located upstream of the well discharge line. <b>See Attachment #1</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of the inspection, Chlorine residuals were not maintained on "LDH Approved Chlorine Residual Forms", which can be founded at <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> the. Also, the public water system is required to keep chlorine residual records for 3 years. Additionally, all records of bacteriological data, chemical data, TTHM and HAA5 data, Lead and Copper, and Consumer Confidence reports shall be made available for review during inspections/sanitary surveys performed by the state health officer. Refer to 40 CFR 141.403 and LAC 51:XII.311.A
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the inspection, it was noted that a TCR tap was added on a dead end and there isn't adequate flushing available. Provide adequate flushing.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC #1	Finished Water Storage	The hydropneumatic tank is not equipped with a sight glass for monitoring of the water level. A sight glass must be provided. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
HD002 - HYDROPNEUMATIC #2	Finished Water Storage	The hydropneumatic tank is not equipped with a sight glass for monitoring of the water level. A sight glass must be provided. <b>See Attachment #5</b>
FACILITY	CATEGORY	FINDINGS
TP001 - RIVER PINES PLANTTN TP	Treatment	During the sanitary survey, all points throughout the distribution system did not maintain the minimum level 0.5mg/L for free chlorine residuals.
FACILITY	CATEGORY	FINDINGS
TP002 - WELL 2	Treatment	During the sanitary survey, all points throughout the distribution system did not maintain the minimum level 0.5mg/L for free chlorine residuals.
FACILITY	CATEGORY	FINDINGS
TP002 - WELL 2	Treatment	Scales are not provided for weighing the chlorine gas cylinders. A weighing scale must be provided.
FACILITY	CATEGORY	FINDINGS
TP001 - RIVER PINES PLANTTN TP	Treatment	Scales are not provided for weighing the chlorine gas cylinders. A weighing scale must be provided. <b>See Attachment #6</b>
FACILITY	CATEGORY	FINDINGS
1063018-002 - RIVER PINES NEW WELL	Source	At the time of inspection, the new well did not have a flow meter on the discharge line. A means to measure the flow at the new well shall be provided.
FACILITY	CATEGORY	FINDINGS
1063018-001 - RIVER PINES EAST WELL (OLD)	Source	At the time of inspection, the old well did not have a flow meter on the discharge line. A means to measure the flow at the well shall be provided.
FACILITY	CATEGORY	FINDINGS

1063018-001 - RIVER PINES EAST WELL (OLD)	Source	The casing must be at least 12" above the concrete slab and 18" above the ground surface. Additionally, there was a crack extending across the concrete apron. Seal all cracks and holes at the concrete apron to prevent contamination. See Attachment #2
---	--------	--

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - RIVER PINES PLANTTN TP	Treatment	Concentrated ammonia hydroxide was not available at Well #1. A bottle of concentrated ammonia hydroxide (56 % ammonia solution) shall be available for chlorine leak detection.
FACILITY	CATEGORY	FINDINGS
TP002 - WELL 2	Treatment	At the time of inspection, The empty cylinders were not separated from the full cylinders and were not individually chained. All cylinders must be properly restrained in an upright position. Additionally, the chlorine building did not have power available to run a ventilation fan or light. A light and fan should be installed for operator safety.

<b>Comments:</b>					

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	System shall have a monitoring plan that includes a list of all routine compliance samples required on a daily, weekly, monthly, quarterly, and annual basis and identify the sampling location where samples are to be collected. The public water system shall revise and re-submit its monitoring plan if changes to the sampling locations or if any significant changes to the disinfection methods are made. In addition, the public water system shall update and re-submit its monitoring plan when the system's sampling requirements or protocols change.

		The monitoring plan was returned to you on 7/12/18 and is waiting for changes to be made to reflect the absorption of FSWC-Coyell (LA1063124).
FACILITY	CATEGORY	FINDINGS
1063019-001 - FRENCH SETTLEMENT WELL	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. The sanitary seal has a crack in it that would allow possible contamination. <b>See Attachment #1</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Complete daily records of the operation of a public water system, including reports of laboratory control tests, shall be kept and retained as prescribed in the National Primary Drinking Water Regulations on forms approved by the state health officer. When specifically requested by the state health officer or required by other requirements of this Part, copies of these records shall be provided to the office designated by the state health officer within 10 days following the end of each calendar month. Additionally, all such records shall be made available for review during inspections/sanitary surveys performed by the state health officer.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	Each tank shall have an access manhole, a drain, and control equipment consisting of a pressure gauge, water sight glass, automatic or manual air blow-off, means for adding air, and pressure operated start-stop controls for the pumps. Where practical the access manhole should be 24 inches in diameter.

		The sight glass is inoperable. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
TP003 - FSWC-COYELL TP NEW	Treatment	Provisions shall be made for measuring the quantities of chemicals used. There is no calibration column provided for the Sodium Hypochlorite chemical feed pump. <b>See Attachment #7</b>
FACILITY	CATEGORY	FINDINGS
TP001 - FRENCH SETTLEMENT	Treatment	Automatic switch-over of chlorine cylinders should be provided, where necessary, to assure continuous disinfection. <b>See Attachment #3</b>

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of inspection, neither the Bruce Harbor nor the Haynes Settlement Treatment Plants had panic hardware. The chlorine room shall be provided with doors equipped with panic hardware, assuring ready means of exit and opening outward only to the building exterior.
FACILITY	CATEGORY	FINDINGS
Management	Other	During the survey of the Bruce Harbor Well and the Haynes Settlement Treatment Plant, a strong odor of chlorine was present and being emitted from the chlorine building. The disinfection equipment showed signs of heavy corrosion which is indicative of a chlorine leak. The water system shall locate the chlorine leak(s) and make repairs. Failure of disinfection components will critically impact the quality of produced water. See Attachment #5 and #6
FACILITY	CATEGORY	FINDINGS
GR001 - HAYNES SETTLEMENT GROUND STORAGE	Finished Water Storage	During the inspection, it was observed that the screen on the overflow pipe of the Haynes Settlement Ground Storage Tank did not have a screen. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. The overflow pipe shall be screened with a 24 mesh, non-corrodible screen to prevent the intrusion of insects and other small pests. See Attachment #4

FACILITY	CATEGORY	FINDINGS
1063122-001 - HAYNES SETTLEMENT WELL	Source	During the survey, it was observed that the well vent on the Haynes Settlement Well did not have a screen. There shall be no pathway for contamination into the well casing. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. The water system shall install a 24 mesh corrosion resistant screen on the well vent.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
HD002 - BRUCES HARBOR HD	Finished Water Storage	At the time of inspection, the drain pipe at the Hydropneumatic Tank at the Bruce Harbor Well did not have and adequate splash pad. All water storage structures shall be provided with a splash pad. The splash pad at the Bruce Harbor Well Hydropneumatic Tank shall be repaired to prevent any future erosion and the eroded area shall be rebuilt. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
TP002 - BRUCES HARBOR TP	Treatment	The Bruce Harbor Well does not have a flow meter to measure how much water they are producing. A flow meter is needed to measure how much water must be treated at the Bruce Harbor Treatment Plant. Without knowing how much water is being treated, a risk of over/under dosing is possible. Rather than estimate the dose by trial and error, perform dose calculations based off demand

		to better determine the chemical feed rate. Compare the trial and error with the calculations to confirm the correct dose to be used. After determining the dose to be used, consult the NSF/ANSI 60 max use for the product to confirm you are within acceptable dosing levels. The water system shall provide dosing calculations for Bruce Harbor Well Site.
FACILITY	CATEGORY	FINDINGS
1063126-001 - BRUCES HARBOR WELL	Source	At the time of inspection, the Bruce Harbor Well did not have a well vent. All potable water well casings shall be vented to atmosphere as provided in LAC 51:XII.327.A.12. All potable water well vents shall be so constructed and installed as to prevent the entrance of contamination. All vent openings shall be piped water tight to a point not less than 24 inches above the highest flood level which may have occurred in a 10-year period, but in no case less than 24 inches above the ground surface. The openings of the vent pipes shall face downward and shall be screened to prevent the entrance of foreign matter. See <b>Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
1063126-001 - BRUCES HARBOR WELL	Source	During the inspection, the Bruce Harbor Wells check valve on the discharge pipe was leaking and in a state of disrepair. Each well is required to have a working check valve upstream of the disinfection point. Fix or replace the check valve at the Bruce Harbor Well. See <b>Attachment #1</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to

correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the site visit, chlorine residuals taken at the POE at the Bruce Harbor well site indicated free chlorine residuals around 0.54 ppm. The reading was observed to increase to 0.57 ppm after one minute, suggesting chloramine interference. The groundwater source at the Bruce Harbor well site may contain varying amounts of naturally occurring ammonia that, if not fully oxidized, can combine with the free chlorine used for disinfection and form chloramines. The Bruce Harbor Well should be assessed for naturally occurring ammonia.
FACILITY	CATEGORY	FINDINGS
Management	Other	It is strongly recommended that the water system develop and implement a written flushing program. The water distribution system and the storage tanks should be flushed as necessary to reduce stagnant water and sediment build-up. Unidirectional and directional flushing are more effective than spot flushing.
FACILITY	CATEGORY	FINDINGS
TP003 - HAYNES SETTLEMENT TP	Treatment	There are no means to detect chlorine leaks. A bottle of concentrated ammonium

		hydroxide (56 per cent ammonia solution) shall be available for chlorine leak detection. The water system must acquire chlorine leak detection equipment.
FACILITY	CATEGORY	FINDINGS
TP002 - BRUCES HARBOR TP	Treatment	There are no means to detect chlorine leaks. A bottle of concentrated ammonium hydroxide (56 per cent ammonia solution) shall be available for chlorine leak detection. The water system must acquire chlorine leak detection equipment.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Capitol Region II  
Attn: Brian Suberbielle,  
P. O. Box 4489, Bin #10, Bienville Bldg.  
Baton Rouge, Louisiana 70821-4489

The following compliance history is provided for your information

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at (225) 342-7511.

Respectfully,

A handwritten signature in blue ink that reads "Brian Suberbielle". The signature is written in a cursive, flowing style.

PWS ID LA1063028  
LIVINGSTON Parish

Dear Mr. Edrington:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 30, 2018 sanitary survey inspection of the public water supply system for FSWC- WHITEHALL/ HEAD of ISLAND (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Significant Deficiencies**

**No observations were recorded in this category.**

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was noted at the time of inspection that the operator is keeping the records for the system however, Town of Killian should obtain and keep the required record including daily chlorine residual results, bacteriological results, chemical records, lead & copper reports and consumer confidence reports as well phosphate monitoring data for all of the required time frame that those records are required to be kept. Also Town of Killian should have a copy of the operators certification, a copy of LAC code title 51, cross connection policy and location of water mains, flushing & isolation valves as well operating log of the system including but not limited to, how complaints were processed, when equipment was calibrated, how often the system is flushed, if spare parts are available, when the pumps were replaced/repared, when the storage tank was evaluated/cleaned/painted/replaced, etc.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE	Finished Water Storage	A required twenty-four mesh non-corrodible screen was not observed behind the flapper valve on the overflow of the ground storage tank. The required mesh must be installed between the flanges located behind the flapper valve on the overflow of the ground storage tank. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
1063030-003 - KILLIAN WELL	Source	The flow meter and pressure gage on the well discharging piping were not functioning at the time of inspection. The flow meter and pressure gage must be repaired or replaced to ensure the proper operation of the system. <b>See Attachment #2 and Attachment #3</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

**The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	Rust was noted on the metal portions of the well discharging pipes at the time of inspection. Please repair. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
TP003 - KILLIAN WELL TP	Treatment	At the time of inspection, there were no scales provided for gaseous chlorine cylinders. Weighing scales are recommended to be provided for weighing cylinders at all plants utilizing chlorine gas. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
TP003 - KILLIAN WELL TP	Treatment	It is recommended that the polyphosphate solution storage is kept covered.
FACILITY	CATEGORY	FINDINGS
TP003 - KILLIAN WELL TP	Treatment	The full and empty chlorine cylinders should be restrained with separate safety chain for each of them to prevent falling over and getting damaged. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
1063030-003 - KILLIAN WELL	Source	At the time of inspection there was no secondary source of water. A second source is recommended for all community water supplies.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southeast Region IX  
 Attn: Jie Gu, P.E.  
 42354 Deluxe Plaza, Suite 13  
 Hammond, Louisiana 70403

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

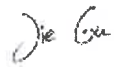

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 985-543-4958.

Respectfully,

Jie Gu, P.E.

Re: Class I Sanitary Survey  
PORT VINCENT WATER SYSTEM Public Water System  
PWS ID LA1063033  
LIVINGSTON Parish

Dear Mr. Edrington, III:

The Notice of Violation Letter, dated June 15, 2018 via certified mail return receipt requested (#70171070000113499178), was sent to you in error and is hereby replaced by this Notice of Violation Letter, dated August 16, 2018 as follows:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 5, 2018 sanitary survey inspection of the public water supply system for PORT VINCENT WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Brian Suberbielle	LDH/OPH Region 2 Engineering
W E Edrington, III	French Settlement Water Company
Jon Mixon	French Settlement Water Company
Jay Richardson, P.E.	LDH/OPH Region 2 Engineering Manager

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

#### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
1063033-002 - PORT VINCENT WELL NO.2(1996)	Source	At the time of inspection, the raw water sample tap was located on a "T" connection which was shared with a threaded tap. All potable water supply wells shall be provided with a readily accessible smooth nozzle faucet or tap on the well discharge line for the collection of water samples. The tap shall be upstream of the well discharge line check valve. The water system shall remove the "T" connection and provide a dedicated connection for the raw water sample tap. See <b>Attachment #1</b>

#### Deficiencies

FACILITY	CATEGORY	FINDINGS
HD002 - HYDROPNEUMATIC	Finished Water Storage	The Port Vincent Well # 2 Hydropneumatic Tank did not have a water sight glass. Each tank shall have an access manhole, a drain, and control equipment consisting of a pressure gauge, water sight glass, automatic or manual air blow-off, means for adding air, and pressure operated start-stop controls for the pumps. See <b>Attachment #5</b>
FACILITY	CATEGORY	FINDINGS
1063033-002 - PORT VINCENT WELL NO.2(1996)	Source	During the inspection, the Port Vincent Well #2 did not have a working flow meter. Each well is required to have a means of measuring flow. Fix or replace the flow meter at the Port Vincent Well #2. See <b>Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
1063033-002 - PORT VINCENT WELL NO.2(1996)	Source	The well vent at the Port Vincent Well #2 was observed to be valved off (closed), preventing the well casing not to be properly vented to the atmosphere. The vent must be constructed and installed as per LAC 51:XII.327.A.12. All

		potable water well vents shall be so constructed and installed as to prevent the entrance of contamination. All vent openings shall be piped water tight to a point not less than 24 inches above the highest flood level which may have occurred in a 10-year period, but in no case less than 24 inches above the ground surface. Such vent openings and extensions thereof shall be not less than 1/2 inch in diameter, with extension pipe firmly attached thereto. The openings of the vent pipes shall face downward and shall be screened to prevent the entrance of foreign matter. See <b>Attachment #3</b>
--	--	--

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the survey, a water hose was attached to a threaded hose bibb on the water well discharge line. This arrangement can cause a possible cross connection incident and contaminate the water supply. When not in use, it is recommended that water hoses should be disconnected

		from any hose bibb that is located on the water well and its component parts. See <b>Attachment #6</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	Other	During the survey of the Port Vincent Water Well #2 Treatment Plant, a strong odor of chlorine was present and being emitted from the chlorine building. The disinfection equipment showed signs of heavy corrosion which is indicative of a chlorine leak. The water system shall locate the chlorine leak(s) and make repairs. Failure of disinfection components will critically impact the quality of produced water. See <b>Attachment #7</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	Other	It is strongly recommended that the water system develop and implement a written flushing program. The water distribution system and the storage tanks should be flushed as necessary to reduce stagnant water and sediment build-up. Unidirectional and directional flushing are more effective than spot flushing.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP002 - WELL NO.2(1996)	Treatment	The chlorine room shall be provided with a shatter resistant inspection window installed in an interior wall, constructed in such a manner that all openings between the chlorine room and the remainder of the plant are sealed, and provided with doors equipped with panic hardware, assuring ready means of exit and opening outward only to the building exterior. See <b>Attachment #4</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP002 - WELL NO.2(1996)	Treatment	There are no means to detect chlorine leaks. A bottle of concentrated ammonium hydroxide (56 per cent

		ammonia solution) shall be available for chlorine leak detection. The water system must acquire chlorine leak detection equipment.

<b>Comments:</b> Chlorine residuals for POE and MRT must be recorded on the "DHH Approved Chlorine Residual Forms", which can be founded at <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please keep your future chlorine residual records on DHH approved forms. And An additional chlorine residual check must be made monthly at the ACR site and recorded on the DHH approved forms.					

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked and areas shall be locked when unattended. The fence shall be resistant to climbing and at least 6 feet high. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
1063058-002 - WELL #2(1995)	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. <b>See Attachment #4</b>

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Complete daily records of the operation of a public water system, including reports of laboratory control tests, shall be kept and retained as prescribed in the National Primary Drinking Water Regulations on forms approved by the state health officer. When

		specifically requested by the state health officer or required by other requirements of this Part, copies of these records shall be provided to the office designated by the state health officer within 10 days following the end of each calendar month. Additionally, all such records shall be made available for review during inspections/sanitary surveys performed by the state health officer.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	Proper protection shall be given to metal surfaces by paints or other protective coatings, by cathodic protective devices, or by both. <b>See Attachment #5</b>
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	Provisions shall be made for measuring the quantities of chemicals used. <b>See Attachment #6</b>
FACILITY	CATEGORY	FINDINGS
1063058-002 - WELL #2(1995)	Source	The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained. <b>See Attachment #3</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	Consideration must be given to the safety of water plant personnel and visitors. The electrical socket faceplate for the chlorine pump is loose and the wires are exposed. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
1063058-002 - WELL #2(1995)	Source	A minimum of two sources of groundwater shall be provided. If you no longer have a second well due to it being abandoned you will need to provide proof of connection to another approved water supply of sufficient capacity.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Capitol Region II  
Attn: Teresa Benton, R.S.  
P. O. Box 4489, Bin #10, Bienville Bldg.  
Baton Rouge, Louisiana 70821-4489

The following compliance history is provided for your information

### **Bacteriological Sampling History**

#### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

### **Violation History**

#### **Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

#### **Maximum Contaminant Level (MCL) Violations during the past year**

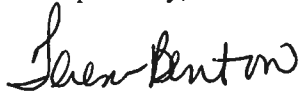

No maximum contaminant level violations were reported in the past year.

#### **Other Violations during the past year**

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 225/342-7598.

Respectfully,

Re: Class I Sanitary Survey  
TESI HIGHLAND RIDGE Public Water System  
PWS ID LA1063087  
LIVINGSTON Parish

Dear Ms. Davidson:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the September 26, 2018 sanitary survey inspection of the public water supply system for TESI HIGHLAND RIDGE (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Total Environmental Solutions

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

Office of Public Health • Southeast Region IX

### Unresolved Observations

Visit Date	Notify Date	Reason	Severity	Category	Facility
03/02/2012	03/02/2012	Sanitary Survey, Finished	Minor	Source	1063087-001-HIGHLAND RIDGE WELL 001
<b>Comments:</b> At least two sources of groundwater are not provided. At least two sources of groundwater must be provided. The total developed groundwater source capacity, unless otherwise specified by the reviewing authority, shall equal or exceed the design maximum day demand with the largest producing well out of service, as per TSS 3.2.1.1. A backup or emergency connection to another approved public water supply may suffice as a second source of water provided that source can meet demand as per TSS 3.2.1.1. All sources of water must be approved by the LA Dept. of Health and Hospitals.					

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	Critical water system component is in poor condition or defective and indicative of failure or imminent failure. Component failure is expected to critically impact the quality and/or quantity of produced water. At the time of inspection, the storage tank was operating at a pressure that exceeded the maximum pressure posted on the tank. <b>See Attachment #3 and #4</b>
FACILITY	CATEGORY	FINDINGS
Management	Security	40 CFR 141.403 and LAC 51:XII.315.D - All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked. At the time of inspection, the security fence was damaged. <b>See Attachment #1 and #2</b>
FACILITY	CATEGORY	FINDINGS
1063087-001 - HIGHLAND RIDGE WELL 001	Source	LAC 51:XII.169.B.2 - When groundwater is the only source of water supply for any community water supply or for any non-community water supply serving a hospital, a

		minimum of two approved and active groundwater wells (or, if not a second well, connection to another approved water supply of sufficient capacity) shall be provided, unless and LDH-approved annual public notice is provided to customers. At the time of inspection, there was only one source of water available in this system.
FACILITY	CATEGORY	FINDINGS
1063087-001 - HIGHLAND RIDGE WELL 001	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. At the time of inspection, the well casing seal appeared to be in poor condition. See <b>Attachment #5</b>

#### Deficiencies

FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	Each tank shall have an access manhole, a drain, and control equipment consisting of a pressure gauge, water sight glass, automatic or manual air blow-off, means for adding air, and pressure operated start-stop controls for the pumps. Where practical the access manhole should be 24 inches in diameter. At the time of inspection, the storage tank did not have a means of measuring the water level.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL 001 TREATMENT PLANT	Treatment	Solution tanks shall be located and protective curbings provided so that chemicals from equipment failure, spillage or accidental drainage

		shall not enter the water in conduits, treatment or storage basins. At the time of inspection, the chlorine storage tank was not protected with secondary containment.

"An Equal Opportunity Employer"

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the inspection, the buildings that housed the electrical components of the system at one time had openings for air conditioning units for climate control. It was also observed that one of the buildings had some significant damage to the wall. Repair any damage to the building and reinstall air conditioners to the buildings to help maintain a stable environment to protect the electrical components of the system.
FACILITY	CATEGORY	FINDINGS
Management	Other	It was noted at the time of the inspection, the altitude valve appears to be leaking as a result from the recent freezing weather. Have the altitude valve inspected and repaired to be sure it is functioning properly.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
1067002-002 - SOUTH WELL	Source	At the time of the inspection, it was noted at the well 2 (south well ), that the vent screen was in poor repair. Replace the well vent screen at well 2 (south well).
FACILITY	CATEGORY	FINDINGS
1067002-004 - EAST WELL	Source	At the time of the inspection, it was noted the air release valve was missing its screen at well 4 (east well). Install a 24 mesh corrosion resistant screen at well 4 (east well).
FACILITY	CATEGORY	FINDINGS
1067002-003 - NORTH WELL	Source	At the time of the inspection, the North Well or Well 1 was not in operation. This well must be returned to the condition of a working well or the well must be properly abandoned by a licensed well driller. If the well is returned to working status, the well needs a concrete apron to extend around the casing and the casing must extend at least 12 inches above the concrete apron and at least 18 inches above final ground surface.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

**At the time of the inspection, it was noted there are several items that are no longer being used in the production of water at the treatment plant site. It is recommended these items, such as the bulk salt tank and contents, the old pumps in the pump house and etc... be removed and properly disposed o.**

BONITA WATER SYSTEM Public Water System  
PWS ID LA1067004  
MOREHOUSE Parish

Dear Mayor Moses:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 27, 2018 sanitary survey inspection of the public water supply system for BONITA WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

**Name**

Stephen K Ray  
Arthur James

**Organization**

OPH Region VIII Engineering  
Village Of Bonita WS

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

Office of Public Health • Northeast Region VIII

1650 Desiard Street • P. O. Box 6118 • Monroe, Louisiana 71211-6118

Phone #: 318-361-7201 • Fax #: 318-362-3163 • [www.ldh.la.gov](http://www.ldh.la.gov)  
"An Equal Opportunity Employer"

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the inspection, it was noted the paint of the elevated storage tank was showing significant signs of exterior rust. Have the interior and exterior of the tank evaluated and painted by a qualified tank painter to protect the tank..
FACILITY	CATEGORY	FINDINGS
Management	Other	The check valve for the backwashing of the filter has failed and is allowing water drain back to the ground storage tank causing the tank to overflow. Repair or replace the check valve for the backwash process of the filter.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the inspection, it was noted the town of Bonita has a formal Cross Connection Control Program that had been being enforced and being inspected by qualified individuals, however the annual 2018 inspection reports for the customers with back flow devices were not noted in the files. Please produce the 2018 inspection reports for the customers of the system with back flow devices.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
1067004-002 - WELL #3	Source	At the time of the inspection, the paint of the piping of the well and casing at well 3 were in poor repair. Scrape and repaint the piping of casing and the above ground piping in the well yard at well 3.
FACILITY	CATEGORY	FINDINGS
1067004-003 - WELL #4	Source	At the time of the inspection, the paint of the piping of the well and casing at well 4 were in poor repair. Scrape and repaint the piping of casing and the above ground piping in the well yard at well 4.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

During the survey, it was noted that vats and pumps for the use of caustic soda and potassium permanganate were located in the chlorine pump room and were not being used. After discussion with the operator, it was noted the design of the plant had been adjusted by the engineer and those processes had not been needed. Please have the system engineer provide a letter stating the system no longer needs these treatment processes.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

Office of Public Health • Northeast Region VIII

1650 Desiard Street • P. O. Box 6118 • Monroe, Louisiana 71211-6118

Phone #: 318-361-7201 • Fax #: 318-362-3163 • [www.ldh.la.gov](http://www.ldh.la.gov)  
"An Equal Opportunity Employer"

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the inspection, it was noted there were significant losses of water occurring in the system. Control water loss occurring in the system.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the inspection, it was noted the Ward 3 Water Association had adopted a formal cross connection control program, however it has not been fully implemented. Enforce the water system's formal cross connection control program.
FACILITY	CATEGORY	FINDINGS
1067016-001 - WELL #1	Source	At the time of the inspection, it was noted at the South well there appeared to be a open hole on the top of the casing which could allow access for the introduction of contamination into the well casing. Also the well casing appears to be significantly corroded and should be inspected and if need be repaired by a licensed well driller.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	At the time of the inspection, sediments have built up around and covered the concrete pad for the footing of the elevated tank allowing it to be in contact with soil

		which can cause rust damage to the tank. Downgrade the soil at this location to remove the soil contact with the steel and help preserve the tank.
FACILITY	CATEGORY	FINDINGS
1067016-002 - WELL #2	Source	At the time of the inspection, it was noted at the North well casing appears to be significantly corroded and should be inspected and if need be repaired by a licensed well driller.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP002 - TP WELL #2	Treatment	Chlorine bottles were noted without restraints at the time of the inspection. Restrain chlorine bottles to prevent accidental upset.

#### **Written Response Required**

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the inspection, it was noted the water system does have a formal cross connection control program. However the back flow tester had not submitted the paperwork, but did confirm the work had been completed for the customers with back flow devices. Proved the documentation from the tester that the test of the sites has been completed.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
1067017-004 - WELL #4	Source	At the time of the inspection, it was noted the air release valve was located at ground level. As the well is in a flood plain, bring the down-turned exhaust/relief piping up to at least 18 inches above the 100 year flood mark.
FACILITY	CATEGORY	FINDINGS
1067017-002 - WELL #2	Source	At the time of the inspection, it was noted the check valve was not functioning. Repair the check valve or consider abandoning the well.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

**At the time of the inspection, it was explained by David Stephens that the generator located at the well site was not the proper size to be utilized in the powering of the wells 3 & 4 and was of no use at that site. I would suggest checking to see if the generator could be utilized to power the building that will be the site of the new office and if it could also be able to operate the pumps in the pump room.**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP004 - WELL #3 & #4	Treatment	At the time of the inspection, it was noted the chlorine bottle were not chained to the wall. Restrain chlorine bottles individually to the wall.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

"An Equal Opportunity Employer"

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	It was noted the pump house had extreme humidity that was causing corrosion on metal items and could potentially negatively affect the electrical panels. This was due in part to the air conditioning unit being broken. Repair or replace the air conditioning unit in the pump house.
FACILITY	CATEGORY	FINDINGS
Management	Other	No violations were noted at the time of the inspection.
FACILITY	CATEGORY	FINDINGS
Management	Other	The above ground piping at well 2 appears to have some sever corrosion, replace areas of piping that are too corroded with new pipe and paint with NSF Standard 61 paint. The #2 booster pump was leaking at the time of the inspection, Repair or replace the #2 booster pump in the pump house.
FACILITY	CATEGORY	FINDINGS
Management	Other	There were large trees, oaks and pines, that are on the chain link fencing at the well site. These trees are almost growing in the fence and pose a threat to the wells, pump house, treatment plant ground storage tank and certainly the fencing if they are not removed should they fall in inclement weather.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	It appears the water system has adopted a formal cross control connection program, however this program is not being enforced. A survey must be conducted by a qualified party to identify customers who need back-flow devices at their meters. Once these customers have been identified, the system

		must maintain the documentation provided by these customers stating that their back-flow devices have been tested annually and certified by qualified party.
FACILITY	CATEGORY	FINDINGS
1067018-003 - WELL #3	Source	At the time of inspection, well #3 was disconnected from the system, but was not properly abandoned. The operator discussed a possibility for using this well for non-potable purposes. If the well is to be used for non-potable purposes, the water system is to write a letter stating that the well will never be used as a source for potable water and will never be connected to any water system piping. Otherwise, the well is to be properly abandoned.
FACILITY	CATEGORY	FINDINGS
1067018-002 - WELL #2	Source	At the time of the inspection, well 2 was not operating. Repair well 2.
FACILITY	CATEGORY	FINDINGS
1067018-001 - WELL #1	Source	It was noted the black plastic piping that is located inside what appears to be old electrical conduit needs to be sealed with silicone to prevent the entry of foreign substances entering the well.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	It was noted the target for marking the water level inside the tank was broken. Repair the target level for marking the water inside the tank.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The screen at the elevated tank overflow was in poor repair. Replace the screen at the overflow with a four mesh, non-corrodible screen

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	The screen for the overflow of the ground storage tank was in poor repair. Replace the screen with a twenty-four mesh non-corrodible screen.
FACILITY	CATEGORY	FINDINGS
1067018-002 - WELL #2	Source	At the time of the inspection, well 2 lacks a flow meter. Install a flow meter at well 2.
FACILITY	CATEGORY	FINDINGS
1067018-001 - WELL #1	Source	It was noted the check valve was not functioning and there was no flow meter at well 1. Repair or replace the check valve and install a flow meter at well 1.
FACILITY	CATEGORY	FINDINGS
1067018-001 - WELL #1	Source	Piping at the upper well terminal was being supported by a pipe stands at well 1. Install pipe stands at well 1 to support the upper well terminal piping. It was also noted there was no splash block to prevent erosion from the discharge of water through bypass line at well 1 onto the ground. Install a splash block to prevent erosion from the discharge of water through bypass line at well 1 onto the ground.
FACILITY	CATEGORY	FINDINGS
1067018-001 - WELL #1	Source	The air release valve lacked a screen. Install a 24 mesh corrosion resistant screen on the terminating piping in a down-turned position at least 18 inches above the floor at the air release valve.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be

**performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

MOREHOUSE Parish

Dear Mr. Harper:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 26, 2018 sanitary survey inspection of the public water supply system for BAYOU DRIVE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	The water system currently does not provide disinfection. Plans and specifications prepared and submitted by a Louisiana licensed professional engineer must be submitted for review to the District IV

		Office Attn: Autumn Permenter at 1525 Fairfield Ave Room 569, Shreveport, LA 71101.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	Operator Compliance with State Requirements	The water system is currently not operated by a properly certified operator. The water system requires a Class 1 Water Production and Water Distribution Operator.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	Security	All water system facilities must be enclosed by a 6' non-climbable fence with a lockable gate.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system did not have a cross connection control program implemented. The water system must implement a cross connection control program.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1067023-002 - WELL NO 2, MIDDLE	Source	The well casing showed signs of corrosion. The electrical wires were exposed. The casing was not properly sealed where the electrical wires entered the casing. All opening into the casing must be properly sealed. The casing must be cleaned and painted to prevent deterioration of the metal.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1067023-002 - WELL NO 2, MIDDLE	Source	The well did not have a concrete slab around it to protect the casing and well from contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1067023-003 - WELL NO 3, SOUTH	Source	The well casing showed signs of corrosion. The electrical wires were exposed. The casing was not properly sealed where the electrical wires entered the casing. All opening into the casing must be properly sealed. The casing must be cleaned and painted to prevent deterioration of the metal.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1067023-003 - WELL NO 3, SOUTH	Source	The well did not have a concrete slab around it to protect the casing and well from contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1067023-001 - WELL NO 1, NORTH	Source	The well casing showed signs of corrosion. The electrical wires were exposed. The casing was not properly sealed where the electrical wires entered the casing. All opening into the casing must be properly sealed. The casing must be cleaned and painted to prevent deterioration of the metal.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1067023-001 - WELL NO 1, NORTH	Source	The well did not have a concrete slab around it to protect the casing and well from contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1067023-001 - WELL NO 1, NORTH	Source	The well was not equipped with the appropriate smooth nozzle sample tap. All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction.

FACILITY	CATEGORY	FINDINGS
1067023-002 - WELL NO 2 , MIDDLE	Source	The well was not equipped with the appropriate smooth nozzle sample tap. All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction.
FACILITY	CATEGORY	FINDINGS
1067023-003 - WELL NO 3, SOUTH	Source	The well was not equipped with the appropriate smooth nozzle sample tap. All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system currently does not add a disinfectant. Upon addition of a disinfectant, the water system will be required to comply with the Disinfection By Products Rule.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system will be provided access to the LDH Engineering Monitoring Plan Portal. Please contact Gregg Stout at 318-676-7481 for assistance in updating the monitoring plan for the water system.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system will be required to install all appropriate sample taps for water quality monitoring in the distribution system.
FACILITY	CATEGORY	FINDINGS
1067023-002 - WELL NO 2 , MIDDLE	Source	The discharge piping of the well was not equipped with the proper appurtenances. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.
FACILITY	CATEGORY	FINDINGS
1067023-003 - WELL NO 3, SOUTH	Source	The discharge piping of the well was not equipped with the proper appurtenances. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.
FACILITY	CATEGORY	FINDINGS
1067023-001 - WELL NO 1, NORTH	Source	The discharge piping of the well was not equipped with the proper appurtenances. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.
FACILITY	CATEGORY	FINDINGS
1067023-001 - WELL NO 1,	Source	The water well was not equipped with an appropriate well vent. The water well must have a proper well vent that extends 12"

NORTH		above the casing, properly down turned, and screened.
FACILITY	CATEGORY	FINDINGS
1067023-003 - WELL NO 3, SOUTH	Source	The water well was not equipped with an appropriate well vent. The water well must have a proper well vent that extends 12" above the casing, properly down turned, and screened.
FACILITY	CATEGORY	FINDINGS
1067023-002 - WELL NO 2, MIDDLE	Source	The water well was not equipped with an appropriate well vent. The water well must have a proper well vent that extends 12" above the casing, properly down turned, and screened.
FACILITY	CATEGORY	FINDINGS
1067023-002 - WELL NO 2, MIDDLE	Source	The well casing does not extend 12" above the pump house floor. The casing must be properly raised.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
1067023-001 - WELL NO 1, NORTH	Source	Please provide a copy of the well driller's log and registration paperwork for the water well.
FACILITY	CATEGORY	FINDINGS
1067023-003 - WELL NO 3, SOUTH	Source	Please provide a copy of the well driller's log and registration paperwork for the water well.
FACILITY	CATEGORY	FINDINGS
1067023-002 - WELL NO 2, MIDDLE	Source	Please provide a copy of the well driller's log and registration paperwork for the water well.

**Written Response Required**

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Security	The fence at the main plant needs to be repaired to prevent unauthorized entry.
FACILITY	CATEGORY	FINDINGS
1069001-005 - WELL #5, CLOUD CROSSING	Source	The concrete slab on Well #5 needs to be repaired to prevent possible contamination.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
1069001-004 - WELL #4, HWY 9 CONLEY	Source	The discharge piping on Well #4 needs to be cleaned and painted.
FACILITY	CATEGORY	FINDINGS
1069001-006 - WELL #6	Source	The discharge piping on Well #6 needs to be cleaned and painted.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

The water system should implement a storage tank maintenance program that includes inspection, cleaning, repairs, and, if needed, painting of storage tanks on a 3-5 year cycle.

### Written Response Required

Clarence Water System  
PWS ID LA1069002  
Natchitoches Parish

Dear Mayor Evans:

The Department of Health and Hospitals would like to thank you and the site visit participants for the courtesy and assistance provided during the September 10, 2018 Follow-Up Sanitary Survey inspection of the public water supply Clarence Water System. These inspections are part of our program to ensure compliance with the EPA Code of Federal Regulations Title 40 Parts 141-142 and Title 51 of the Louisiana Administrative Code.

This letter provides a summary of items noted in previous sanitary surveys in addition to during this follow-up sanitary survey. If significant deficiencies have been listed on the subsequent pages you are required to correct the deficiencies and provide written documentation of your corrective actions including the date(s) resolved. You may also request additional time beyond the 60 days in writing by providing a detailed plan of corrective action that includes proposed completion dates. Failure to respond to this letter in writing within 60 days of receipt may result in Enforcement Action.

## Violation History

### Monitoring Violations during the past year

No monitoring violations were reported in the past year.

### Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

### Other Violations during the past year

Violation Number	Violation Date	Violation Type	Compliance Period
------------------	----------------	----------------	-------------------

## NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS

Based upon review of the available records and visual examination of the facilities, the following deficiencies require your immediate attention.

Visit Date	Notify Date	Reason	Severity	Category	Facility
04/25/2018	05/02/2018	Sanitary Survey, Finished	Significant	Security	Management
<b>Comments:</b> The fencing around the Elevated Storage tank needs to be cleared of vines/trees to prevent it from losing it's integrity.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
04/25/2018	05/02/2018	Sanitary Survey, Finished	Minor	Finished Water Storage	EL001-EST #1
<b>Comments:</b> A splash plate is needed under the overflow pipe to prevent erosion of the ground.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
04/25/2018	05/02/2018	Sanitary Survey, Finished	Minor	Finished Water Storage	EL001-EST #1
<b>Comments:</b> The elevated tank is showing signs of rust. The tank should be cleaned of rust and painted.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
04/25/2018	05/02/2018	Sanitary Survey, Finished	Minor	Finished Water Storage	GR002-GST #2
<b>Comments:</b> A splash plate is needed under the overflow pipe to prevent erosion of the ground.					

## **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	The water system must repair or replace the communications system between the elevated storage tank and the ground storage tank pumps. The current method of manual operation is resulting in significant upsets within the distribution system including water outages and periods of discolored water.
FACILITY	CATEGORY	FINDINGS

Management	Other	There is excessive vegetation growth at the main plant located at Natchitoches Hwy 6, which prevent the access to the facilities for inspections or sampling. Also, vegetation is growing on the discharge piping of the elevated tank, at the base of the tank, and around the fencing area. All the vegetation must be removed and the sites must be cleaned to allow the access and to protect the integrity of the facilities.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	System Management and Operation	The water system does not have an operable source of standby power. A generator is available, however, it currently does not function properly. The generator must be repaired or replaced.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system continues to have operational issues with the electronic radar system controlling the communications between the elevated tank and the ground storage high service pumps. When the automatic controls are not properly operating, the system experiences episodes of low pressure in the distribution system. The water system must maintain a minimum pressure of 20 psig at all times at all points in the distribution system. In the event the pressure in the distribution system drops below 20 psig, the water system must issue a boil advisory to all affected customers. Water system management or operations must notify this office when the pressure drops below 20 psig and a boil advisory is issued.

**Minor Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	The POE-002 (1911 Hwy 6, LA) is located after the first customer. The POE must be installed after all treatment (chemical addition) and storage facilities, prior to the distribution system and the first customer. A Lead-free smooth nozzle type tap must be provided at each POE to the distribution system.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No flush valves are installed at dead ends. Dead end mains must be equipped with a means to provide adequate flushing.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL001 - EST #1	Finished Water Storage	Overflow pipe did not have a screen. Vents on elevated tanks shall open-downward, and be fitted with four mesh non-corrodible screen.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL001 - EST #1	Finished Water Storage	The elevated tank shows significant signs of corrosion on inside the overflow pipe and on the exterior. The tank exterior and interior must be inspected, cleaned, and painted to protect the integrity of the facility.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL001 - EST #1	Finished Water Storage	The sample tap at the elevated tank was not working. The sample tap must be replaced.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>

EL001 - EST #1	Finished Water Storage	There are no level controls installed at the elevated tank. Level indicating devices must be provided at a central location.
----------------	------------------------	--

The deficiencies listed in the above table titled “**NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS**” must be corrected and a written response submitted to the department within 60 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the DHH-OPH Enforcement Units. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided by the Public Water System to the Surveying Office within 60 days of receipt of this letter with details regarding your corrective actions and any time extensions you may propose or you will be cited with a Treatment Technique violation which requires you to notify your consumers of the violation incurred.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
CC001 - CC TO NATCHITOCHES 1069007	Source	
FACILITY	CATEGORY	FINDINGS
GR002 - GST #2	Finished Water Storage	
FACILITY	CATEGORY	FINDINGS
TP002 - BOOSTER STATION TP	Treatment	There was a gap on top of the ammonia tank and feed lines. The gap must be sealed, or an appropriate cover/lid must be used.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

DHH/OPH Engineering Services – Northwest Region VII  
 Attn: Zahira Tieso, P.E.  
 1525 Fairfield Ave. Room 569  
 Shreveport, Louisiana 71101

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 318-676-7434 or [Zahira.Tieso@la.gov](mailto:Zahira.Tieso@la.gov).

Respectfully,

P.O. Box 37  
Natchitoches, LA 71458

Re: Revised Total Coliform Rule (RTCR) – Level 2 Assessment  
Natchitoches Water System  
PWS ID No. 1069007  
Natchitoches Parish, Louisiana

Mayor Posey:

Pursuant to the requirements of the Revised Total Coliform Rule (RTCR), a Level 2 Assessment is required for the above referenced water system. Level 2 assessments are conducted by the State of Louisiana Office of Public Health Engineering Services Staff. The results will be provided to the water system in order for corrective action to be completed within 30 days of notification.

The water system triggered this requirement due to

- ☐ E. Coli positive (EC+) routine sample followed by total coliform positive (TC+) repeat sample.
- ☐ Total coliform positive (TC+) routine sample followed by E. Coli positive (EC+) repeat sample.
- ☐ Failing to take all required repeat samples following an E. Coli positive routine sample
- ☒ 2<sup>nd</sup> Treatment Technique Trigger within 12 month period.

The Level 2 Assessment for the water system was performed on May 29, 2018 at 10:00 am.

Please remember the following requirements:

1. The purpose of the assessment is to determine sanitary defects that may have led to the occurrence of total coliforms. The system must take corrective action to eliminate the sanitary defects.

2. The completed assessment with corrective actions taken must be returned to this office within 30 days of notification. The completed assessment must be submitted to this office by **06/23/2018**.

Sincerely,

A handwritten signature in black ink, appearing to read 'Autumn Permenter', with a stylized flourish at the end.

Rev. 3/2017

**III. Assessment Questions**

**A. Source – Well**

*\*If PWS does not use a well source check here and skip to subsection B*

☒

<b>Which well sources were not used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Was a new source activated?				
2. Is the ground graded to prevent surface water flow towards the well?				
3. Does the well casing extend at least 18" above the ground?				
4. Is the exposed portion of the well casing in good condition?				
5. Does the well have a secured sanitary seal well cap?				
6. Is the sanitary seal well cap vented and screened?				
7. Is there a down turned well vent that is at least 24 inches above the ground surface?				
8. Are appropriate backflow prevention devices installed, maintained and tested on all cross connections?				
9. Does raw water quality data indicate changes to the source water quality?				
10. Has source yield changed?				
11. Are there obvious sources of contamination in the vicinity of the well?				
12. Was the well pump recently repaired or replaced?				
13. Are there signs of vandalism at the well?				
14. Have there been any unusual weather events that may have impacted the well?				
15. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the well?				

**Assessor Name: Autumn Permenter**

**B. Source – Surface Water**

*\*If PWS does not use a surface water source check here and skip to subsection C*

☐

<b>Which surface water sources were used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Is the surface water intake screened and maintained?		X		
2. Is the pump house protected from unauthorized personnel?	X			
3. Does raw water quality data indicate changes to the source water quality?		X		
4. Are there obvious sources of contamination within the nearby watershed?	X			
5. Are there signs of vandalism at the surface water intake?		X		
6. Have severe weather events such as heavy rainfall, rapid snowmelt, drought, or reservoir turnover occurred?		X		
7. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the source?		X		

**Assessor Name: Autumn Permenter**

**RTCR Level 2 Assessment Form**

Rev. 3/2017

**C. Treatment Processes**

Questions:	YES	NO	N/A	Unk.
1. Have there been interruptions in any treatment processes?		X		
2. Has the treatment plant(s) or finished water pump(s) experienced any power interruptions?		X		
3. Has there been any recent installation or repair of treatment equipment?		X		
4. Have there been changes to any treatment processes?		X		
5. Does water quality data indicate inadequate/inappropriate treatment of water?		X		
6. Are all treatment processes operational and maintained?	X			
7. Is there an air gap between treatment instrumentation and waste lines?			X	
8. Were there any failures to meet required CT values?		X		
9. Did treatment plant flow rates exceed the permitted capacity?		X		
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?		X		
11. Did a review of the turbidity data reveal any anomalies?		X		
12. Did a review of chlorine residual data reveal any anomalies or deficiencies?		X		

**Assessor Name: Autumn Permenter**

**D. Distribution System**

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?		X		
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?			X	
3. If samples were collected from inside a building, does the site have additional water treatment installed?			X	
4. Is there evidence that the system experienced low or negative pressure?		X		
5. Was there any scheduled flushing of the distribution system?		X		
6. Are pump stations protected from unauthorized personnel?	X			
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?	X			
8. Are air relief valves maintained and operational without leaks?	X			
9. Are pump stations maintained and equipment operational?	X			
10. Are fire hydrants and blow offs maintained and operational without leaks?	X			
11. Does water quality data collected in the distribution system show results indicative of an issue?		X		
12. Have any water related customer complaints been received?		X		
13. Is there any evidence of intentional contamination in the distribution system?		X

**E. Storage Tanks**

*\*If no storage tank check here and skip to section IV.* ☐

Questions:	YES	NO	N/A	Unk.
1. Is the pressure tank maintaining an appropriate minimum pressure?			X	
2. Are all vents and overflow pipes screened?		X		
3. Is the tank maintained and free of rust, holes and leaks?		X		
4. Are there any unsealed openings in the storage facility such as access doors, vents or joints?		X		
5. Are signs of vandalism visible?		X		
6. Are roof hatches and manhole openings tightly covered and locked?		X		
7. Do downspouts and overflow pipes drain water away from structure?	X			
8. Have all storage tanks been inspected and cleaned within the last 5 years?	X			

**Assessor Name:** Autumn Permenter

**IV. Water Quality Data Table**

Parameter	Number of Each Sample Type Collected		
	Raw	Entry Point	Distribution
Chlorine Residual (mg/L)	0	3.9	1.5
Turbidity (NTU)	7.47	0.06	N/A
Coliform Bacteria	N/A	N/A	N/A
Other (specify below)			

\*Free chlorine 0.09 mg/L; 3.9 mg/L monochloramines

**V. Issue Descriptions and Corrective Actions (Use page 7 to report additional issues)**

*\* No issues were found during the assessment:* ☐

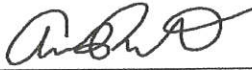

Issue Description (list section letter and #)	Corrective Action
(Section B, #4) The sample tap was infested with ants leading to a possible source of contamination.	The site shall be treated and cleaned to remove insects and prevent future infestations in order to protect against contamination.

**Louisiana Department of Health, Office of Public Health**  
**Engineering Services – Safe Drinking Water Program**  
**RTCR Level 2 Assessment Form**

Rev. 3/2017

Issue Description (list section letter and #)	Corrective Action
(Section E, #2) The overflow pipes at EST #2 (Pilgrim's Pride), EST #4 (Hwy 6), EST #7 (Gold Street), and EST #8 (I-49) were not properly screened.	The overflow pipe must be screened with a 4 mesh non-corrodible screen and installed to provide protection at all times.
Issue Description (list section letter and #)	Corrective Action
(Section E, #6) Access hatch on clear well at plant was not properly secured or lockable.	The access hatch lid must be properly closed and secured to prevent unauthorized entry.

Re: Class I Sanitary Survey  
NATCHITOCHES WATER SYSTEM Public Water System  
PWS ID LA1069007  
NATCHITOCHES Parish

Mayor Posey:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 29, 2018 sanitary survey inspection of the public water supply system for NATCHITOCHES WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

**Name**

Autumn Permenter  
Matt Anderson  
Jennifer Kihlken  
Danny Mortimer

Natchitoches Water System  
LDH-OPH/Engineering Services  
OPH Region VII Engineering  
City Of Natchitoches  
LDH-OPH Region 8

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The water system is not under the control and supervision of a duly certified operator for periods of time. The water system, per population and system design at the time of the survey, must be placed under the supervision and control of a certified operator holding at least level IV certifications in the categories of Water Treatment. At all times, when the surface water plant operates multiple shifts, a certified operator is required to be present on each shift.
FACILITY	CATEGORY	FINDINGS
GR001 - GST #1, CLEAR WELL	Finished Water Storage	The level gauge is no longer functional or in use. As result, there are holes allowing the possible entrance of a contaminant into the potable water supply. The holes must be sealed to prevent the entrance of birds, insects, dust or other contaminating material.
FACILITY	CATEGORY	FINDINGS
EL002 - EST #2, PILGRIM'S PRIDE	Finished Water Storage	The protective fencing surrounding the well and pressure tanks was compromised in order to perform maintenance and repair work. The sections of the fence that are intact have significant gaps near the ground that leave the water system facilities exposed. A continuous fence, capable of being locked, must be constructed to prevent trespassing, vandalism, and sabotage of the water system facilities. Please submit labeled photographic documentation of completed repairs.
FACILITY	CATEGORY	FINDINGS
EL006 - EST #6, GRAND ECORE	Finished Water Storage	The protective fencing surrounding the well and pressure tanks was compromised in order to perform maintenance and repair work. The sections of the fence that are intact have significant gaps near the ground that leave the water system facilities exposed. Furthermore, there are large breaks in sections of the fence from a fallen pole and excess vegetation growth. A continuous fence, capable of being locked, must be constructed to prevent trespassing, vandalism, and sabotage of the water system facilities. Please submit labeled photographic documentation of completed repairs.
FACILITY	CATEGORY	FINDINGS
EL007 - EST #7, GOLD STREET	Finished Water Storage	The protective fencing surrounding the well and pressure tanks was compromised in order to perform maintenance and repair work. The sections of the fence that are intact have significant gaps near the ground that leave the water system facilities exposed. Furthermore, there are sections of the fence with broken barbed wire. A continuous fence, capable of being locked, must be constructed to prevent trespassing, vandalism, and sabotage of the water system facilities. Please submit labeled photographic documentation of completed repairs.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL008 - EST #8, I-49	Finished Water Storage	From review the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - GST #2, BYPASS	Finished Water Storage	Piping within the pipe gallery is showing signs of rust, corrosion and flaking paint. The piping must be cleaned, treated and painted to resist further corrosion.
FACILITY	CATEGORY	FINDINGS
GR002 - GST #2, BYPASS	Finished Water Storage	The area around the sample tap at the storage tank is excessively wet and holding water in a ditched area. This area must be well drained to facilitate the rapid removal of water within a 50' radius of the storage tank. The ponding water presents a potential source of contamination and may potentially compromise the integrity of the structure.
FACILITY	CATEGORY	FINDINGS
GR002 - GST #2, BYPASS	Finished Water Storage	The Ground Storage Tank did not have an overflow pipe. All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.
FACILITY	CATEGORY	FINDINGS
EL003 - EST #3, MLK	Finished Water Storage	The overflow for the elevated storage tank discharges at the top of the tank. An overflow pipe should be installed to extend the overflow discharge within 12-24 inches over a splash pad or drainage inlet structure.
FACILITY	CATEGORY	FINDINGS
EL005 - EST #5, HIGHWAY 3191	Finished Water Storage	The overflow for the elevated storage tank does not discharge between 12 and 24 inches over a splash plate or drainage inlet structure. All overflow pipes shall be located so that any discharge is visible.
FACILITY	CATEGORY	FINDINGS
EL004 - EST #4, OLD HWY 6	Finished Water Storage	The overflow for the elevated storage tank does not discharge between 12 and 24 inches over a splash plate or drainage inlet structure. All overflow pipes shall be located so that any discharge is visible.
FACILITY	CATEGORY	FINDINGS
GR001 - GST #1, CLEAR WELL	Finished Water Storage	The overflow for the elevated storage tank does not discharge over a splash plate or drainage inlet structure. The discharge must discharge over a splash plate or drainage inlet structure to prevent erosion around the foundation of the tower that could comprise the structural integrity of the tower.
FACILITY	CATEGORY	FINDINGS
EL002 - EST #2, PILGRIM'S PRIDE	Finished Water Storage	The overflow for the elevated storage tank does not discharge over a splash plate or drainage inlet structure. The discharge must discharge over a splash plate or drainage inlet structure to prevent erosion around the foundation of the tower that could comprise the structural integrity

		of the tower.
FACILITY	CATEGORY	FINDINGS
GR001 - GST #1, CLEAR WELL	Finished Water Storage	The overflow pipe must be screened with 24 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	The chemical feed tank for the 907 alum is not labeled. The chemical feed tank must be labeled. Label the chemical feed tank with the name of the chemical being injected for treatment.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

## State of Louisiana

Department of Health and Hospitals  
Office of Public Health

June 21, 2018

Mayor Lee Posey  
Natchitoches Water System  
P.O. Box 37  
Natchitoches, LA 71458

Re: Revised Total Coliform Rule (RTCR) – Level 2 Assessment  
Natchitoches Water System  
PWS ID No. 1069007  
Natchitoches Parish, Louisiana

Mayor Posey:

Pursuant to the requirements of the Revised Total Coliform Rule (RTCR), a Level 2 Assessment is required for the above referenced water system. Level 2 assessments are conducted by the State of Louisiana Office of Public Health Engineering Services Staff. The results will be provided to the water system in order for corrective action to be completed within 30 days of notification.

The water system triggered this requirement due to

☒ E. Coli positive (EC+) routine sample followed by total coliform positive (TC+) repeat sample.

☐ Total coliform positive (TC+) routine sample followed by E. Coli positive (EC+) repeat sample.

The Level 2 Assessment for the water system was performed on June 21, 2018 at 9:30 am.

Please remember the following requirements:

1. The purpose of the assessment is to determine sanitary defects that may have led to the occurrence of total coliforms. The system must take corrective action to eliminate the sanitary defects.

2. The completed assessment with corrective actions taken must be returned to this office within 30 days of notification. The completed assessment must be submitted to this office by 07/19/2018.

Sincerely,

A handwritten signature in black ink, appearing to read 'Autumn Permenter', with a stylized flourish at the end.

Re: Class 2 Follow-Up Sanitary Survey Site Visit  
Powhatan Water System  
PWS ID LA1069008  
Natchitoches Parish

Dear Mayor Taylor:

The Department of Health and Hospitals would like to thank you and the site visit participants for the courtesy and assistance provided during the September 27, 2018 Follow-Up Sanitary Survey inspection of the public water supply Powhatan Water System. These inspections are part of our program to ensure compliance with the EPA Code of Federal Regulations Title 40 Parts 141-142 and Title 51 of the Louisiana Administrative Code.

This letter provides a summary of items noted in previous sanitary surveys in addition to during this follow-up sanitary survey. If significant deficiencies have been listed on the subsequent pages you are required to correct the deficiencies and provide written documentation of your corrective actions including the date(s) resolved. You may also request additional time beyond the 60 days in writing by providing a detailed plan of corrective action that includes proposed completion dates. Failure to respond to this letter in writing within 60 days of receipt may result in Enforcement Action.

<b>Comments:</b> The well casing shows signs of corrosion. The casing must be cleaned and painted.					

#### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED STORAGE TANK	Finished Water Storage	Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. Openings or vents shall face downward and shall be not less than 2 feet above the floor of a pump room, the roof or cover of a tank, the ground surface or the surface of other water supply structures. There was a constant stream of water coming out of the bottom of the elevated storage tank. The leak must be repaired and the storage tank should be brought back to a watertight state.

Re: Level 2 Assessment triggered on October 18, 2018  
Powhatan Water System  
PWS ID LA1069008  
Natchitoches Parish

Dear Responsible Party:

The Louisiana Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 23, 2018 RTCR Level 2 Assessment of the public water supply system for Powhatan Water System. The intent of this assessment, in response to multiple positive total coliform samples in a running 12 month period, is to locate sanitary defects the could infer with the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code.

**Parties Present**

Name	Organization
Danny Mortimer	OPH-Region V Engineering
Gregg Stout	OPH-Region V Engineering
Eddie Jackson	Powhatan Water System

The RTCR Level 2 Assessment form is enclosed with this letter. Please review the findings of the assessment report. The sanitary defects listed in the table, starting on page 4 of the RTCR Level 2 Assessment Form titled "Issue Descriptions and Corrective Actions" must be corrected and a written response submitted to the department within 30 days of the RTCR Level 2 Assessment triggered on October 18, 2018. The response is due on or before November 18, 2018. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these sanitary defects, then the written response must also contain a request with specific dates when the sanitary defects will be corrected.

**Written Response Required**

Send written responses and confirmation regarding findings of the RTCR Level 2 Assessment to the office that conducted this survey at the following address:

LDH/OPH Engineering Services  
Attn: Danny Mortimer District 4 Sanitarian  
1525 Fairfield Ave Rm 569  
Shreveport, LA 71101

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 318-676-7432.

Respectfully,

A handwritten signature in black ink, appearing to be 'D. Mortimer', written over a horizontal line.

Re: Class 2 Follow-Up Sanitary Survey Site Visit  
Powhatan Water System  
PWS ID LA1069008  
Natchitoches Parish

Dear Mayor Taylor:

The Department of Health and Hospitals would like to thank you and the site visit participants for the courtesy and assistance provided during the December 27, 2018 Follow-Up Sanitary Survey inspection of the public water supply POWHATAN WATER SYSTEM. These inspections are part of our program to ensure compliance with the EPA Code of Federal Regulations Title 40 Parts 141-142 and Title 51 of the Louisiana Administrative Code.

This letter provides a summary of items noted in previous sanitary surveys in addition to during this follow-up sanitary survey. If significant deficiencies have been listed on the subsequent pages you are required to correct the deficiencies and provide written documentation of your corrective actions including the date(s) resolved. You may also request additional time beyond the 60 days in writing by providing a detailed plan of corrective action that includes proposed completion dates. Failure to respond to this letter in writing within 60 days of receipt may result in Enforcement Action.

**NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS**

Based upon review of the available records and visual examination of the facilities, the following deficiencies require your immediate attention.

**Unresolved Observations** – Deficiencies cited during previous site visits

Visit Date	Notify Date	Reason	Severity	Category	Facility
03/27/2017	03/30/2017	Formal Enforcement	Significant	Source	1069008-002-WELL #2
<b>Comments:</b> There is a significant crack on the well slab. The concrete slab must be repaired to prevent the introduction of contamination into the well casing.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
03/27/2017	03/30/2017	Formal Enforcement	Minor	Finished Water Storage	GR001-GROUND STORAGE TANK
<b>Comments:</b> The pressure gage was leaking. The leak must be repaired.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
03/27/2017	03/30/2017	Formal Enforcement	Minor	Source	1069008-002-WELL #2
<b>Comments:</b> The well casing shows signs of corrosion. The casing must be cleaned and painted.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	The electrical box on well # 1 was severely corroded. Holes could begin to form on it soon which could allow moisture into the electrical box and cause it to fail. The electrical box shall be repainted to provide cathodic protection on it.
FACILITY	CATEGORY	FINDINGS
Management	Other	The 3 wells are located in the back of a field. The inspection was completed after a period of heavy rain, which made this field extremely muddy. When the field is muddy, the wells are inaccessible by vehicle and very difficult to reach by foot. All-weather access roads must be provided for all well yards, and as such an all-weather access road shall be provided for the 3 wells so that they may be accessed during times of heavy rainfall.
FACILITY	CATEGORY	FINDINGS
Management	Security	All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked. At the time of the inspection, several facilities were unlocked. All facilities related to the water system shall be kept locked at all times.
FACILITY	CATEGORY	FINDINGS
Management	System Management and	At the time of the inspection, Ms. Jackson did not know how to turn on the generator. This could pose as a serious problem in an emergency situation where standby power must be applied immediately. Ms.

	Operation	Jackson must get proper instruction on how to operate the generator.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	During the inspection, the screen on the inside of the overflow piping was dislodged which could allow the entrance of small insects into the storage tank. The screen should be secured to the walls of the overflow pipe.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED STORAGE TANK	Finished Water Storage	There was no screen on the overflow piping for the elevated tank. This could provide the entrance of small animals and insects into the finished water storage. A screen shall be added to the elevated tank.
FACILITY	CATEGORY	FINDINGS
1069008-001 - WELL #1, NEAREST WELL	Source	At the time of the inspection, the well casing had slits on both sides of the well. It appears the casing has split apart down the middle, creating fairly large holes. These holes shall be sealed to prevent a pathway for contamination into the well.
FACILITY	CATEGORY	FINDINGS
1069008-002 - WELL #2	Source	At the time of the inspection, the well casing was extremely eroded. The portion between the top of the casing and the sample tap was in such a degraded state that a piece of concrete was loose. After further inspection, the piece could be removed and one could see directly inside of the well casing once removed. There was also a hole at the bottom of the casing which looked to be an old screw hole. There were also holes in the back of the electrical box. The well casing was showing signs of heavy corrosion as well. All of these could provide pathways for contamination into the well and shall be corrected.

#### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED STORAGE TANK	Finished Water Storage	The elevated tank was leaking a steady stream of water out of the bottom of the reservoir. The leak shall be patched. All cisterns and storage tanks shall be of watertight construction and made of concrete, steel or other materials approved for this purpose by the state health officer.
FACILITY	CATEGORY	FINDINGS
1069008-001 - WELL #1, NEAREST WELL	Source	At the time of the inspection, there was no flow meter on the discharge piping. A flow meter should be added to the discharge piping. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.
FACILITY	CATEGORY	FINDINGS
1069008-004 - WELL NO 4	Source	There was no screen on the air release valve. A screen shall be added to the air release valve. The discharge piping shall where applicable, be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen.

The deficiencies listed in the above table titled **“NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS”** must be corrected and a written response submitted to the department within 60 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the DHH-OPH Enforcement Units. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided by the Public Water System to the Surveying Office within 60 days of receipt of this letter with details regarding your corrective actions and any time extensions you may propose or you will be cited with a Treatment Technique violation which requires you to notify your consumers of the violation incurred.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

PWS ID LA1069012  
NATCHITOCHEs Parish

Dear Mr. Johnson:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 2, 2018 sanitary survey inspection of the public water supply system for CHESTNUT-READHIMER WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

Andy Freeman	Red River Power Solutions

#### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**No observations were recorded in this category.**

**Deficiencies**

**No observations were recorded in this category.**

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

The water system should implement a storage tank maintenance program that includes inspection, cleaning, repairs, and, if needed, painting of storage tanks on a 3-5 year cycle.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

**NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS**

Based upon review of the available records and visual examination of the facilities, the following deficiencies require your immediate attention.

**Unresolved Observations – Deficiencies cited during previous site visits**

Visit Date	Notify Date	Reason	Severity	Category	Facility
02/04/2014	02/06/2014	Sanitary Survey, Finished	Minor	Treatment	TP001-SURFACE WATER TREATMENT PLANT
<b>Comments:</b> Please contact your chemical provide and confirm all chemicals stored together in the water treatment plant building are compatible.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water system modified the treatment process without approval. At the time of the site visit, the system was operating as a free chlorine system. However, the system is permitted as a chloramines system. The water system must receive LDH approval prior to making modifications to the treatment processes. Attached are documents to be utilized when the water system will perform a chlorine cleanse. Please submit the attached documents for review and approval by LDH whenever the system deems a chlorine cleanse is needed.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system recently switched from chlorine to chloramines. However, the process to properly make this change was not documented through the Nitrification Control Plan. Please review the system Nitrification Control Plan. If adjustments must be made to the plan, please resubmit for review and approval by LDH. Starting November 1, 2018, and continuing for 6 consecutive months, submit a copy of the data recorded and maintained in accordance with the Nitrification Control Plan to this office with the system monthly operating reports by the 10th of the following month.
FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	At the time of the site visit, automatic switch-over for the gas chlorine cylinders was not available. The chlorine cylinders are being changed manually when the one is use is empty. Automatic switch over of chlorine cylinders must be installed to ensure continuous disinfection.
FACILITY	CATEGORY	FINDINGS

TP001 - SURFACE WATER TREATMENT PLANT	Treatment	The fan of the chlorine building at the main plant was not working. The chlorine gas cylinders were not properly secured. The ventilating fan must be replaced to ensure that one complete air change per minute is accomplished when the room is occupied. Full and empty cylinders of chlorine gas must be restrained in position at all times to prevent upset.
---	-----------	--

The deficiencies listed in the above table titled "**NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS**" must be corrected and a written response submitted to the department within 60 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the DHH-OPH Enforcement Units. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided by the Public Water System to the Surveying Office within 60 days of receipt of this letter with details regarding your corrective actions and any time extensions you may propose or you will be cited with a Treatment Technique violation which requires you to notify your consumers of the violation incurred.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

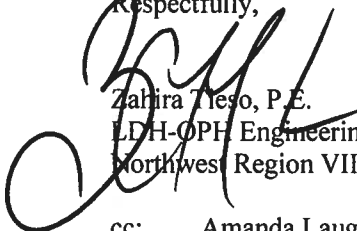

#### **Written Response Required**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	40 CFR 141.403 and LAC 51:XII.309.A - All public water supplies shall be under the supervision and control of a duly certified operator as per requirements of the State Operator Certification Act, Act 538 of 1972, as amended. Crazy Al's is currently not under the supervision of a certified operator.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT FOR WELL #1	Treatment	40 CFR 141.403 and TSS 5.2.2 - Chemicals shall be approved by the reviewing authority or meet the appropriate ANSI/AWWA standards and/or ANSI/NSF Standard 60. Crazy Al's is currently using Clorox Performance bleach to disinfect their water, which is not NSF 60 approved.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### Written Response Required

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Metro Region I

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No Unresolved Significant Deficiencies from previous survey.**

**Significant Deficiencies**

No observations were recorded in this category.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
TP001 - MONROE WATER TREATMENT PLANT	Treatment	All chemicals used in the treatment of water to be used for potable purposes shall either meet the standards of the American Water Works Association or meet NSF 60 requirements as verified by an ANSI accredited testing agency. Please provide labels with chemical name, purity and concentration, supplier name and address, and NSF/AWWA approvals as applicable on each chemical tank (Ammonia and Zinc Orthophosphate outside the chemical building, Alum and Potassium Permanganate inside the chemical building).
FACILITY	CATEGORY	FINDINGS
TP001 - MONROE WATER TREATMENT PLANT	Treatment	There is no secondary containment provided for the liquid chemical tanks for Ammonia and Zinc Orthophosphate outside of the chemical building, near the caustic tank, being used for water treatment. Secondary containment prevents spillage or accidental drainage of chemicals due to equipment and primary containment failure.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System	Excessive vegetation is growing on/near the fence at the

	Management and Operation	Ground Storage Tank (GR-004/Ruffin Drive). Please trim two trees on the fence line to reduce hazard to security fence and maintain to prevent future growth.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

Office of Public Health • Northeast Region VIII

1650 Desiard Street • P. O. Box 6118 • Monroe, Louisiana 71211-6118

Phone #: 318-361-7201 • Fax #: 318-362-3163 • [www.ldh.la.gov](http://www.ldh.la.gov)  
"An Equal Opportunity Employer"

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the inspection, it was noted the ground storage tank #1 at the Ticheli Road plant had rust present in several locations including what might be small holes at the top of the tank. Have the tank cleaned and inspected and take appropriate action to prevent rust from further damaging the tank.
FACILITY	CATEGORY	FINDINGS
Management	Other	It was noted that significant rusting is occurring around one of the east facing blank flanged portal of the most northern carbon vessel at the Ticheli Road site. Inspect and take appropriate action to remove the corrosion and paint any of the affected areas of the carbon vessels at the site. Also noted were some of the ball valves located on the carbon vessels were leaking and needed to be replaced. Replace the leaking ball valves at the carbon vessels.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the inspection, it was noted the South Monroe Water System had adopted a formal cross connection control program, however the program had not yet been implemented. Enforce the cross connection control plan for the system.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	It was noted at the Stone Gate and Evans sites, the areas were leaking even though these sites are supposed to be inactive and isolated from the system. Isolate the Stone Gate and Evans sites from the distribution system.

FACILITY	CATEGORY	FINDINGS
1073046-002 - WELL ON EVANS STREET	Source	At the time of the inspection, it was noted the Evans Street well site was not functioning at the time of the inspection, Please have the well properly abandoned by a Louisiana licensed well driller.
FACILITY	CATEGORY	FINDINGS
1073038-002 - LANGFORD DRIVE WELL #2	Source	At the time of the inspection, it was noted the Langford Drive well site was not functioning at the time of the inspection, Please have the well properly abandoned by a Louisiana licensed well driller.
FACILITY	CATEGORY	FINDINGS
1073046-001 - WELL ON PEARL STREET	Source	At the time of the inspection, it was noted the Pearl Street well site was not functioning at the time of the inspection, Please have the well properly abandoned by a Louisiana licensed well driller.
FACILITY	CATEGORY	FINDINGS
1073046-003 - WELL ON TICHEL ROAD	Source	At the time of the inspection, there was a black hose that extended from the casing on the Ticheli Road well. As the hose does not appear to be a well vent, secure a cap over the end of the hose where no foreign matter can enter the well.
FACILITY	CATEGORY	FINDINGS
1073038-001 - STONE GATE ROAD WELL	Source	At the time of the inspection, it was noted the Stone Gate Road well site was not functioning at the time of the inspection, Please have the well properly abandoned by a Louisiana licensed well driller.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

**It is recommended that the water system remove all of the unnecessary tanks and equipment at the inactive locations at the Stone Gate, Langford, Pearl and Evans sites.**

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

"An Equal Opportunity Employer"

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

No unresolved observations were recorded in this category.

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, the water system had a cross connection control program and so far identified one high risk customer that required a backflow prevention device. A survey of the entire system must be completed to ensure that all customers, residential and commercial, are protected from potentially polluting the distribution system. High risk customers include but are not limited to restaurants, hospitals, schools, funeral homes, jails, churches, farms, customers with swimming pools, private wells, fountains, animal watering troughs, and others. An up-to-date critical customer list must be compiled and annual backflow prevention testing reports must be kept on file as well. Please provide a written statement to this office of the actions that will be taken to survey the system and enforce the cross connection control program.
FACILITY	CATEGORY	FINDINGS
GR002 - GST AT JENNIFER LN	Finished Water Storage	At the time of inspection, signs of rust were found around the flange seal of the ground storage tank outlet pipe, indicative of a small leak. All potable storage facilities shall be maintained to prevent leakage of water. Inspect the rusting area for the cause of the leak and/or replace any deteriorating or defective parts.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the nitrification control plan and the record-keeping forms for the required daily, weekly, and monthly monitoring sites did not match up. The sites listed on the reporting forms should accurately reflect what is in the nitrification control plan as designed and approved. Either update the forms or submit a revised nitrification control plan for approval to accurately reflect the proper sites.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of the inspection, it was noted the colorimeters being used to measure the chlorine residuals in the systems were not being checked against known color standards to verify the colorimeters are operating properly. Color standards must be

		purchased that are specified by the manufacturer of the colorimeter and used weekly to test the colorimeters and this information is to be recorded. Deviations of + or - 10 percent or more shall be cause for calibration, repair, or replacement of the equipment.
FACILITY	CATEGORY	FINDINGS
GR002 - GST AT JENNIFER LN	Finished Water Storage	The ground storage tank overflow and drain do not currently discharge over a drainage inlet structure or splash pad. Install a splash pad underneath the overflow and tank drain discharge point.
FACILITY	CATEGORY	FINDINGS
GR001 - GST AT NORTH POINT SITE	Finished Water Storage	The ground storage tank overflow discharged at an elevation greater than 24 inches above the ground surface. All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate. Bring the overflow piping down to discharge between 12 and 24 inches above the ground surface.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
GR002 - GST AT JENNIFER LN	Finished Water Storage	At the time of inspection, the ground storage tank ladder was equipped with a safety cage but did not have a locked entrance hatch or cover to prevent unauthorized access. Install a ladder guard or locked entrance hatch to prevent unauthorized access to the ground storage tank ladder.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The Point of Entry sample location at 6460 Hwy 77, was approximately .1 mile from the Fordoche Well site and did not have an approved sample tap. The water system shall relocate the POE sampling tap in between the Fordoche Well site and the water main that parallels Hwy 77. A smooth-nosed sampling tap must also be provided, which draws water directly from the mains and be a minimum of 10 - 12 inches above the ground. See <b>Attachment #8</b>
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	The overflow splash pad at the Overton St. Ground Storage Tank is not adequate. The splash pad does not cover all areas near the tank subject to erosion from the overflow discharge. The splash pad must be increased and cover all areas near the storage tank that can be eroded away by overflow. See <b>Attachment #6</b>
FACILITY	CATEGORY	FINDINGS
TP001 - WELL @ HWY 81 & 77 PALERMO PRO	Treatment	The building where the chlorine pump for the Fordoche Treatment Plant was housed did not have a ventilation system. Where chlorine gas is used, the

		room shall be constructed to provide the following: vents from feeders and storage shall discharge to the outside atmosphere, above grade.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1077009-001 - FORDOCHE WELL HWY 81 & 77	Source	At the time of inspection, the Fordoche Well did not have vent screen on the air relief pipe. The discharge piping shall be equipped with air relief piping covered with a 24 mesh corrosion resistant screen. The water system shall install a 24 mesh corrosion resistant screen on the air relief pipe at the Fordoche Well. See <b>Attachment #1</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1077009-001 - FORDOCHE WELL HWY 81 & 77	Source	During the survey, the Fordoche Well did not have a working pressure gauge. The discharge piping on each well shall be equipped with a pressure gauge. Fix or replace the pressure gauge at the Fordoche Well. See <b>Attachment #2</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1077009-003 - OVERTON STREET WELL	Source	The vent screen on the air relief pipe at the Overton St. well was in a state of disrepair. The discharge piping shall be equipped with air relief piping covered with a 24 mesh corrosion resistant screen. The water system shall replace the screen on the air relief pipe with a 24 mesh corrosion resistant screen. See <b>Attachment #5</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written

confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	At the time of inspection, the Fordoche and Overton St. wells did not have a squirrel cage on the wells rotating pump shaft, presenting a risk to employee safety. Rigid guards, shields, or squirrel cages were not provided. It is recommended that a squirrel cages be installed around the rotating shaft on the Fordoche and Overton St. wells. <b>See Attachment #10 and #9</b>
FACILITY	CATEGORY	FINDINGS
TP002 - OVERTON WELL TREATMENT PLT	Treatment	Full chlorine cylinders were restrained by a common chain and stored in the chlorine pump room at the Overton St. Treatment Plant. Full and empty cylinders of chlorine gas should be isolated from operating areas, restrained in position to prevent upset. Full and empty chlorine cylinders shall be removed from the chlorine pump room, individually restrained and stored in areas not in direct sunlight or exposed to excessive heat. <b>See Attachment #7</b>
FACILITY	CATEGORY	FINDINGS
TP001 - WELL @ HWY 81 & 77 PALERMO PRO	Treatment	Full chlorine tanks were being stored in the chlorine pump room, chained together, and next to a heat source. Full and empty cylinders of chlorine gas should be isolated from operating areas, restrained in position to prevent upset. Full and empty chlorine cylinders shall be removed from the chlorine pump room,

		individually restrained and stored in areas not in direct sunlight or exposed to excessive heat. See Attachment #4
FACILITY	CATEGORY	FINDINGS
TP001 - WELL @ HWY 81 & 77 PALERMO PRO	Treatment	Upon inspection of the treatment plant at the Fordoche Well site, the chlorine gas tank room only had one weighing scale. Weighing scales shall be provided for weighing cylinders at all plants utilizing chlorine gas. The water system shall provide weighing scales for each chlorine gas tank. See Attachment #3

### **Written Response Required**

July 6, 2018

Kyle Olinde  
POINTE COUPEE DETENTION CENTER  
New Roads, LA 70760

Re: Class I Sanitary Survey  
POINTE COUPEE DETENTION CENTER Public Water System  
PWS ID LA1077046  
POINTE COUPEE Parish

Dear Mr. Olinde:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 3, 2018 sanitary survey inspection of the public water supply system for POINTE COUPEE DETENTION CENTER (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

**Name**

Brian Suberbielle  
Joe Zaback

**Organization**

LDH/OPH Engineering  
Pointe Coupee Detention Center

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the site visit, the Designated Operator, Joe Zaback, reported that 20 gallons of Clorox 12.5% (NaOCl) was being feed per week into the system for disinfection. After calculating the chemical feed rate, based off demand, it appears that the NSF/ANSI 60 max product use is being exceeded. The max use for Clorox 12.5% (NaOCl) is 70 mg/L. The calculated dose being used at the Ponte Coupee Detention Center is 114 mg/L. A free chlorine test was conducted at the Point of Entry (POE) and the test recorded a free chlorine residual of .99 mg/L. With such a high chlorine dosage coupled with the free chlorine residual of .99 mg/L, suggests that the groundwater source at the Pointe Coupee Detention Center Well #2 site may contain varying amounts of naturally occurring compounds that might exert a higher than normal chlorine demand. The Pointe Coupee Detention Center Well #2 should investigate the cause of the additional demands.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	During the inspection, it was observed that the overflow pipe of the Pointe Coupee Detention Center Hydropneumatic Tank did was not have a screen. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of insects, dust or other contaminating material. The overflow pipe shall be screened with a 24 mesh, non-corrodible screen. See <b>Attachment #1</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the water system was collecting daily chlorine residuals, however, the chlorine residuals were not being collected from the designated Point of Entry (POE) and the Maximum Residence Time (MRT) collection points. It is required that chlorine residuals be collected daily from the Point of Entry and Maximum Residence Time locations and the daily records of chlorine residual

		measurements shall be kept and maintained on the proper forms approved by the state health officer and shall be retained for a period of three years. LDH Approved Chlorine Residual Forms can be found under the Safe Drinking Water Program on the Louisiana Department of Health's website.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	At the time of survey the facility could not produce the daily chlorine residual results, bacteriological results, chemical records, lead & copper reports and Consumer confidence reports for all of the required time frame that records are required to be kept.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 - DISTRIBUTION SYSTEM	Distribution System	During the inspection, the sample tap for the MRT was equipped with a threaded mixer tap. Smooth nose sampling taps shall be provided at the POE, MRT and TCR sites noted in the monitoring plan. See <b>Attachment #5</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
HD001 - HYDROPNEUMATIC	Finished Water Storage	At the time of inspection, the overflow pipe on the hydropneumatic tank at the Pointe Coupee Detention Center did not have a splash pad. All water storage structures shall be provided with an overflow which opens downward and discharges over a drainage inlet structure or a splash pad. See <b>Attachment #6</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 - PC DETENTION CENTER HYPOCHLORITE	Treatment	At the time of inspection, the chlorine solution tank was not labeled. Tanks shall be clearly labeled with the name of the chemical contained. See <b>Attachment #3</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 - PC DETENTION CENTER HYPOCHLORITE	Treatment	No secondary spill protection was provided for the chlorine

		solution tank. Solution tanks shall be located and protective curbing provided so that chemicals from equipment failure, spillage or accidental drainage shall not enter the water in conduits, treatment or storage basins. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
1077046-002 - P.C.DETENTION WELL #2	Source	At the time of inspection, the Pointe Coupee Detention Center Well #2 well vent was not at a minimum height of 24 inches above the ground/slab. All potable water well casings shall be vented to atmosphere as provided in LAC 51:XII.327.A.12. All potable water well vents shall be so constructed and installed as to prevent the entrance of contamination. The open end of the vent must be screened and must terminate in the downward position at a minimum height of 24 inches above the ground/slab. <b>See Attachment #2</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
----------	----------	----------

Management	Other	It is strongly recommended that the water system develop and implement a written flushing program. The water distribution system and the storage tanks should be flushed as necessary to reduce stagnant water and sediment build-up. Unidirectional and directional flushing are more effective than spot flushing.
------------	-------	--

Other Violations during the past year

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at (225) 342-7511.

Respectfully,

Brian Suberbielle,

cc: Amanda Laughlin, P. E., Chief Engineer, LDH-OPH-Engineering

## Attachments

### Attachment #1

**Severity:** Significant

**Facility ID:** HYDROPNEUMATIC

**Category:** Finished Water Storage

**Attachment Comments:** During the inspection, it was observed that the overflow pipe of the Pointe Coupee Detention Center Hydropneumatic Tank did not have a screen. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of insects, dust or other contaminating material. The overflow pipe shall be screened with a 24 mesh, non-corrodible screen.

**Attachment #2**

**Severity:** Minor

**Facility ID:** P.C.DETENTION WELL #2

**Category:** Source

**Attachment Comments:** At the time of inspection, the Pointe Coupee Detention Center Well #2 well vent was not at a minimum height of 24 inches above the ground/slab. The open end of the vent must be screened and must terminate in the downward position at a minimum height of 24 inches above the ground/slab.

**Attachment #3**

**Severity:** Minor

**Facility ID:** PC DETENTION CENTER HYPOCHLORITE

**Category:** Treatment

**Attachment Comments:** At the time of inspection, the chlorine solution tank was not labeled. Tanks shall be clearly labeled with the name of the chemical contained.

**Attachment #4**

**Severity:** Minor

**Facility ID:** PC DETENTION CENTER HYPOCHLORITE

**Category:** Treatment

**Attachment Comments:** No secondary spill protection was provided for the chlorine solution tank. Solution tanks shall be located and protective curbings provided so that chemicals from equipment failure, spillage or accidental drainage shall not enter the water in conduits, treatment or storage basins.

**Attachment #5**

**Severity:** Minor

**Facility ID:** DISTRIBUTION SYSTEM

**Category:** Distribution System

**Attachment Comments:** During the inspection, the sample tap for the MRT was equipped with a threaded mixer tap. Smooth nose sampling taps shall be provided at the POE, MRT and TCR sites noted in the monitoring plan.

**Attachment #6**

**Severity:** Minor

**Facility ID:** HYDROPNEUMATIC

**Category:** Finished Water Storage

**Attachment Comments:** At the time of inspection, the overflow pipe on the hydromechanical tank at the Pointe Coupee Detention Center did not have a splash pad. All water storage structures shall be provided with an overflow which opens downward and discharges over a drainage inlet structure or a splash pad.

Mayor Jacques Roy  
City of Alexandria Water System  
P.O. Box 71  
Alexandria, LA 71309

Re: Revised Total Coliform Rule (RTCR) – Level 2 Assessment  
City of Alexandria Water System  
PWS ID No. 1079001  
Rapides Parish, Louisiana

Mayor Roy:

Pursuant to the requirements of the Revised Total Coliform Rule (RTCR), a Level 2 Assessment is required for the above referenced water system. Level 2 assessments are conducted by the State of Louisiana Office of Public Health Engineering Services Staff. The results will be provided to the water system in order for corrective action to be completed within 30 days of notification.

The water system triggered this requirement due to

☒ E. Coli positive (EC+) routine sample followed by E. Coli positive (EC+) repeat sample.

☐ Failing to take all required repeat samples following an E. Coli positive routine sample

☐ 2<sup>nd</sup> Treatment Technique Trigger within 12 month period.

The Level 2 Assessment for the water system was performed on June 18, 2018 at 9:00 am.

Please remember the following requirements:

1. The purpose of the assessment is to determine sanitary defects that may have led to the occurrence of total coliforms. The system must take corrective action to eliminate the sanitary defects.
2. The completed assessment with corrective actions taken must be returned to this office within 30 days of notification. The completed assessment must be submitted to this office by **07/16/2018**.

Sincerely,

A handwritten signature in black ink, appearing to read "Autumn Permenter".

Re: Class I Sanitary Survey  
ROGERS COMMUNITY WATER SYSTEM INC  
PWS ID LA1059013  
LA SALLE Parish

Dear Mr. Shinnick:

The Louisiana Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 9, 2016 sanitary survey inspection of ROGERS COMMUNITY WATER SYSTEM. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

Name	Organization
Henri J. Hammond	LDH Region 6 Engineering
Lester Laqua	Rogers Community Water System
Leroy Shinnick	Rogers Community Water System
Flora F Shinnick	Rogers Community Water System

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

No other violations were reported in the past year.

**NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

No observations were recorded in this category.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - ROGERS WATER SUPPLY	Distribution System	1.) On Chlorine storage building, there needs to be an inlet for fresh air. 2.) Light switch and fan exhaust not working.
FACILITY	CATEGORY	FINDINGS
SP001 - ELEVATED STANDPIPE	Finished Water Storage	Replace tank or repair with cleanup and corrosion protection.
FACILITY	CATEGORY	FINDINGS
TP002 - DISINFECTION WELL 2	Treatment	1.) On Chlorine storage building, there needs to be an inlet for fresh air. 2.) Light switch and fan exhaust not working.
FACILITY	CATEGORY	FINDINGS
TP001 - DISINFECTION WELL 1	Treatment	1.) On Chlorine storage building, there needs to be an inlet for fresh air. 2.) Light switch and fan exhaust not working. 3.)
FACILITY	CATEGORY	FINDINGS
1059013-001 - WELL 1	Source	Pressure gauge missing and needs to be installed.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP002 - DISINFECTION WELL 2	Treatment	Booster Pump (Goulds 5GBC10) needs servicing repair.
FACILITY	CATEGORY	FINDINGS
TP001 - DISINFECTION WELL 1	Treatment	1.) On Chlorine storage building, there needs to be an inlet for fresh air. 2.) Light switch and fan exhaust not working.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Central Region VI  
Attn: Henri Hammond, E.I.  
5604-B Coliseum Blvd.

**III. Assessment Questions**

**A. Source – Well**

*\*If PWS does not use a well source check here and skip to subsection B*

☒

<b>Which well sources were not used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Was a new source activated?		X		
2. Is the ground graded to prevent surface water flow towards the well?	X			
3. Does the well casing extend at least 18" above the ground?	X			
4. Is the exposed portion of the well casing in good condition?	X			
5. Does the well have a secured sanitary seal well cap?	X			
6. Is the sanitary seal well cap vented and screened?		X		
7. Is there a down turned well vent that is at least 24 inches above the ground surface?	X			
8. Are appropriate backflow prevention devices installed, maintained and tested on all cross connections?	X			
9. Does raw water quality data indicate changes to the source water quality?		X		
10. Has source yield changed?		X		
11. Are there obvious sources of contamination in the vicinity of the well?		X		
12. Was the well pump recently repaired or replaced?		X		
13. Are there signs of vandalism at the well?		X		
14. Have there been any unusual weather events that may have impacted the well?		X		
15. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the well?		X		

**Assessor Name: Autumn Permenter**

**B. Source – Surface Water**

*\*If PWS does not use a surface water source check here and skip to subsection C*

☐

<b>Which surface water sources were used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Is the surface water intake screened and maintained?				
2. Is the pump house protected from unauthorized personnel?				
3. Does raw water quality data indicate changes to the source water quality?				
4. Are there obvious sources of contamination within the nearby watershed?				
5. Are there signs of vandalism at the surface water intake?				
6. Have severe weather events such as heavy rainfall, rapid snowmelt, drought, or reservoir turnover occurred?				
7. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the source?

**C. Treatment Processes**

Questions:	YES	NO	N/A	Unk.
1. Have there been interruptions in any treatment processes?		X		
2. Has the treatment plant(s) or finished water pump(s) experienced any power interruptions?		X		
3. Has there been any recent installation or repair of treatment equipment?		X		
4. Have there been changes to any treatment processes?		X		
5. Does water quality data indicate inadequate/inappropriate treatment of water?		X		
6. Are all treatment processes operational and maintained?	X			
7. Is there an air gap between treatment instrumentation and waste lines?	X			
8. Were there any failures to meet required CT values?		X		
9. Did treatment plant flow rates exceed the permitted capacity?		X		
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?	X			
11. Did a review of the turbidity data reveal any anomalies?		X		
12. Did a review of chlorine residual data reveal any anomalies or deficiencies?		X		

**Assessor Name: Autumn Permenter**

**D. Distribution System**

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?	X			
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?		X		
3. If samples were collected from inside a building, does the site have additional water treatment installed?			X	
4. Is there evidence that the system experienced low or negative pressure?		X		
5. Was there any scheduled flushing of the distribution system?	X			
6. Are pump stations protected from unauthorized personnel?	X			
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?			X	
8. Are air relief valves maintained and operational without leaks?	X			
9. Are pump stations maintained and equipment operational?	X			
10. Are fire hydrants and blow offs maintained and operational without leaks?	X			
11. Does water quality data collected in the distribution system show results indicative of an issue?		X		
12. Have any water related customer complaints been received?		X		
13. Is there any evidence of intentional contamination in the distribution system?		X

### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	<p>POE-002 at 2502 Lee Street is not equipped with a smooth-nosed sampling tap. The POE site must be equipped with a smooth-nosed sampling tap to facilitate bacteriological and chemical analyses, when needed.</p> <p>POE-005 at 4931 Betty Street is not equipped with a smooth-nosed sampling tap. The POE site must be equipped with a smooth-nosed sampling tap to facilitate bacteriological and chemical analyses, when needed.</p>
FACILITY	CATEGORY	FINDINGS
Management	Security	<p>The protective fencing surrounding the Betty Street Well, Well R1431, and Well R925 sites is compromised. The sections of the fence/gate that are intact have significant gaps near the ground that leave the water system facilities exposed. A continuous fence, capable of being locked, must be constructed to prevent trespassing, vandalism, and sabotage of the water system facilities. Please submit labeled photographic documentation of completed repairs.</p> <p>Fencing at the following well sites is covered in vines and excessive brush: Well R932, Well R915, Well R920, Well R914, Well R921, and Well R916. The fencing at each site should be cleared of vines and brush and maintained to prevent future growth.</p>
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	<p>A threaded sample tap was located upstream of the well discharge line check valve. These taps were discovered at the following locations, but should be removed at all locations where applicable: Beech and Hickory Well, Lee and Masonic West Well, Lee and Masonic East Well, Well R905, Well R906, Well R1431, Well R907, Well 937, Well 909, Well 910, Well 1209, Well R1432, Well R1292, Well R929, Well R928, Well R924, Well R927, Well R930, Well R932, Well R915, Well R923, Well R1475, Well R922, Well R918, Well R920, Well R921, Well R916, Well R912, Well R933, Well R936, and Well R914.</p>
FACILITY	CATEGORY	FINDINGS
GR003 - GST @ MASONIC	Finished Water Storage	<p>The ladder at the tank was unlocked. Replace the lock or remove the bottom section of the ladder to prevent unauthorized climbing of the tank.</p>
FACILITY	CATEGORY	FINDINGS
GR001 - GST @ KISATCHIE (EAST TANK)	Finished Water Storage	<p>The pipe used to support the overflow piping is resting on a patio chair. The well discharge piping must be adequately supported to prevent physical damage. Install a new pipe support at the location of the discharge.</p> <p>The overflow for the Ground Storage Tank does not discharge over a splash plate or drainage inlet structure. The discharge must discharge over a splash plate or drainage inlet structure to prevent erosion around the foundation of the tower that could comprise the structural integrity of the tower.</p>
FACILITY	CATEGORY	FINDINGS

1079001-062 - LEE AND MASONIC WEST WELL	Source	A hole was discovered on the ground near the concrete slab. The hole must be filled with dirt and graded to drain away from the well to prevent ponding of water near the concrete slab.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
MULTIPLE	Source	Erosion was noted near the well slab at the following locations: Well R920, Well R912, Well R914, Well R928, Well R927, Well R923, Well R924, Well R932, Well R915, Well R918, Well R916, Well R933, Well R1432, and Well R929. The area around the well slab must be properly filled and graded to prevent ponding of water near the concrete slab and possible contamination of the wellhead. A splash pad must also be installed to prevent further erosion of the site.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1079001-039 - WELL R 929	Source	The well vent screen was torn. The well vent must be replaced and covered by a 24 mesh corrosion resistant screen.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1079001-006 - WELL R 922	Source	Excessive vegetation is growing on and around the existing concrete slab. The vegetation must be removed and maintained to prevent any potential contamination into the well.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1079001-018 - WELL R 937	Source	Holes and gaps are visible in the pump motor cage and casing which could allow entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids to prevent bacteriological contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1079001-019 - WELL R 909	Source	<p>Holes in the back of the electrical box create a void and are not properly sealed. The current electrical box has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the electrical box to prevent bacteriological contamination.</p> <p>The well casing vent is not covered by a 24 mesh corrosion resistant screen. The well casing vent must be covered by a 24 mesh corrosion resistant screen.</p> <p>Holes in the well casing create a void and are not properly sealed. These holes/voids provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the casing to prevent bacteriological contamination.</p>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1079001-009 - WELL R 910	Source	<p>Holes in the back of the electrical box create a void and are not properly sealed. The current electrical box has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the electrical box to prevent bacteriological contamination.</p> <p>The well casing vent has a hole in the screen. The well casing vent must be covered by a 24 mesh corrosion resistant screen free from</p>

		holes.
FACILITY	CATEGORY	FINDINGS
1079001-014 - WELL R 905	Source	Soil is eroded at the well bypass (blow off) pipe. The hole must be filled with dirt and graded to drain away from the well to prevent ponding of water near the concrete slab and possible contamination of the wellhead. A splash pad must also be installed to prevent further erosion of the site.
FACILITY	CATEGORY	FINDINGS
1079001-057 - WELL @ GOLF CLUB (1ST WELL PAST BRIDGE)	Source	<p>The well casing vent is not covered by a 24 mesh corrosion resistant screen. The well casing vent must be covered by a 24 mesh corrosion resistant screen.</p> <p>The area around the well is excessively wet due to the pre-lube discharge line being detached. The area around the well must be well-drained and facilitate the rapid removal of water within a 50' radius of the well. The pre-lube discharge line must be properly attached to prevent ponding water allowing for a potential source of contamination.</p> <p>There is a void space between the well discharge pipe and the casing seal. The void space where the pipe is directed through the casing seal needs to be sealed to prevent possible contamination.</p>
FACILITY	CATEGORY	FINDINGS
1079001-033 - BEECH AND HICKORY WELL	Source	The well casing vent screen is damaged. The well casing vent screen must be repaired/replaced by a 24 mesh corrosion resistant screen. A gap in the well casing creates a void and is not properly sealed, providing for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the casing to prevent bacteriological contamination.
FACILITY	CATEGORY	FINDINGS
1079001-027 - WELL R 925	Source	The well discharge piping has a hose bib connection without an atmospheric vacuum breaker installed. An atmospheric vacuum breaker must be installed on the hose bib to protect against contamination.
FACILITY	CATEGORY	FINDINGS
1079001-057 - WELL @ GOLF CLUB (1ST WELL PAST BRIDGE)	Source	The well has been inactive for approximately 1 year due to leaks in the raw water line. The water line should be repaired/replaced in order to put the well back in service, or the well should be properly abandoned and plugged in accordance with the Louisiana Water Well Rules, Regulations, and Standards.
FACILITY	CATEGORY	FINDINGS
1079001-062 - LEE AND MASONIC WEST WELL	Source	The well has been inactive for approximately 6 months due to a broken motor. The motor should be repaired/replaced in order to put the well back in service, or the well should be properly abandoned and plugged in accordance with the Louisiana Water Well Rules, Regulations, and Standards.
FACILITY	CATEGORY	FINDINGS
1079001-	Source	The well vent screen was torn. The well vent must be replaced and

040 - WELL R 930		covered by a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1079001- 072 - HIGHWAY 1 WELL	Source	There is a void space between the well discharge pipe and the casing seal. The void space where the pipe is directed through the casing seal needs to be sealed to prevent possible contamination.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system does not have a dedicated point of entry sample tap after treatment at the following facilities: Hwy 1 Facilities & Plant and Sterkx Facilities & Plant. At each site, create a designated point of entry sampling location with a smooth nosed tap at a location under pressure. The tap must be located after all treatment and prior to the first customer.
FACILITY	CATEGORY	FINDINGS
GR003 - GST @ MASONIC	Finished Water Storage	The area around the overflow splash pad is eroded. The overflow must discharge over a splash plate or drainage inlet structure to prevent erosion around the foundation of the tank that could comprise the structural integrity of the tank.
FACILITY	CATEGORY	FINDINGS
GR007 - GST @ STERKX	Finished Water Storage	The area near the splash pad has been eroded by the overflow discharge. The splash pad must be increased and the area around the pad graded and addressed to prevent erosion due to overflow events and to disallow surface water from standing within 50 feet of the storage tank.
FACILITY	CATEGORY	FINDINGS
EL003 - ELEVATED TANK @ INDUSTRIAL PARK	Finished Water Storage	The elevated tower is not equipped with a smooth-nosed sampling tap. The elevated tower must be equipped with a smooth-nosed sampling tap to facilitate bacteriological and chemical analyses, when needed.
FACILITY	CATEGORY	FINDINGS
EL003 - ELEVATED TANK @ INDUSTRIAL PARK	Finished Water Storage	The ground in the EST area is saturated with low spots and marshy conditions. The area shall be graded in a manner that will prevent surface water from standing within 50 feet of it.
FACILITY	CATEGORY	FINDINGS
EL004 - ELEVATED TANK @ WILLOW GLENN RIVER ROAD	Finished Water Storage	The ground in the EST area is saturated with low spots and marshy conditions. The area shall be graded in a manner that will prevent surface water from standing within 50 feet of it.
FACILITY	CATEGORY	FINDINGS
EL004 - ELEVATED TANK @	Finished Water Storage	The overflow pipe is not properly screened. The overflow pipe must be screened with a 4 mesh non-corrodible screen and installed to provide protection at all times.

WILLOW GLENN RIVER ROAD		
FACILITY	CATEGORY	FINDINGS
EL003 - ELEVATED TANK @ INDUSTRIAL PARK	Finished Water Storage	The overflow pipe is not properly screened. The overflow pipe must be screened with a 4 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
GR002 - GST @ KISATCHIE (WEST TANK)	Finished Water Storage	The overflow pipe screen has a small hole. The 24 mesh non-corrodible screen must be replaced/repared to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
MULTIPLE	Source	The air release-vacuum relief valve is not properly screened at the following well sites: Well R936, Well R930, Well R920, Well R912, Well R914, Well R906, Well 1329 (at Golf Course Near Airport), Well 1566 (Highway 1 Well), and Well 1543 (Sterkx Well). The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1079001-034 - WELL R 923	Source	The air release-vacuum relief valve on the transmission main for the well was leaking. The valve must be repaired/replaced as applicable.
FACILITY	CATEGORY	FINDINGS
MULTIPLE	Source	The well discharge piping is showing signs of rust, corrosion and flaking paint at the following well sites: Well R937, Well R909, Well 1406 (Lee and Masonic West Well), Well 875 (Betty Street Well), Well R1210, Well R910, Well 1202 (Beech and Hickory Well), and Well 748 (Lee and Masonic East Well). The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
1079001-072 - HIGHWAY 1 WELL	Source	The well is not equipped with a casing vent. The well must be equipped with a downturned casing vent with appropriate non-corrodible 24 mesh screening, a minimum of height of 12 above grade or floor, and a minimum diameter of 1.5 inches.
FACILITY	CATEGORY	FINDINGS
1079001-049 - HWY 1 WELL (BY RAILROAD TRACKS)	Source	The well's discharge piping discharges into a storm drain pipe that does not have a proper air gap. An air gap of a least 2 inches or 2 times the diameter of the pipe, whichever is larger, is required to protect against the possibility of contamination.
FACILITY	CATEGORY	FINDINGS
1079001-069 - STERKX WELL	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing

		vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
--	--	---

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	There was significant vegetation growth at the following sites: Well 937, Well 909, Well 910, Well 1209, Well R907, Well R 1210, Well R1431, Well R905, and Betty Street Well. Trim vegetation inside the fence and perform regular maintenance of the area.
FACILITY	CATEGORY	FINDINGS
TP061 - TP @ STERKX	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
Town of Boyce Water System, Public Water System  
PWS ID LA1079003  
Rapides Parish

Dear Mayor Moore:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 8, 2018 sanitary survey inspection of the public water supply system for Town of Boyce Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

Town Of Boyce Water System

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. Sec 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There is a Cross Connection Control Ordinance and Backflow Prevention Program in place, but no records present identifying installed BFP devices, annual inspections, maintenance and testing. Water systems shall implement and enforce licensed installation, annual inspection & testing, repair and / or replacement of Backflow Prevention Devices to insure protection and safety of the potable water produced and distributed.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The Town of Boyce has not validated the colorimeter. The water system shall obtain appropriate validation standards, measure and record validation checks at no more than 90-day intervals and retain these records. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with 24 mesh non-corrodible screen. <b>See Attachment #3</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	The ground storage tank ladder was not secured to prevent access to the roof of the tank. The ladder must be secured to prevent unauthorized access to GST roof. <b>See Attachment #2</b>

**Written Response Required**

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

**No observations were recorded in this category.**

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There were threaded taps installed on the discharge piping of well 1- Hwy 115, well 2- Hwy 28 East Well, well#3- Hwy 1205, and well #4- Craig Road. Smooth nozzle taps must replace the threaded taps or a vacuum breaker device must be installed at each site to protect the water supply from cross contamination.

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL003 - ELEVATED TANK @ HWY 28	Finished Water Storage	A 24- inch mesh is installed within the overflow pipe of the Elevated tank at Hwy 28. The screen must be replaced for with a 4 mesh, non-corrodible screen. The screen must be installed within the overflow pipe at a location least susceptible to damage by vandalism. If a flapper is used, a screen must be provided inside the valve.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND TANK @ HWY 28 PLANT	Finished Water Storage	A 4-inch mesh is installed within the overflow pipe of the ground storage tank at Hwy 28 Plant. The screen must be replaced for with a 24 mesh, non-corrodible screen. The screen must be installed within the overflow pipe at a location least susceptible to damage by vandalism. If a flapper is used, a screen must be provided inside the valve.
FACILITY	CATEGORY	FINDINGS
GR005 - GROUND TANK @ WELLS 1 & 2	Finished Water Storage	A 4-inch mesh is installed within the overflow pipe of the ground storage tank at well #1 site. The screen must be replaced for with a 24 mesh, non-corrodible screen. The screen must be installed within the overflow pipe at a location least susceptible to damage by vandalism. If a flapper is used, a screen must be provided inside the valve.
FACILITY	CATEGORY	FINDINGS
1079004-005 - WELL 5 - HWY 115	Source	There were tree limbs extending to the electrical panel that can cause damage to the facility at well #5- Hwy 115. The tree limbs must be trimmed and maintained to prevent any damage to the facility.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP012 - DISINFECTION @ WELLS 1 AND 5	Treatment	Chlorine gas cylinders in use at the treatment plant located in Hwy 115 were not individually chained. Chlorine gas cylinders in use should be individually chained. Full and empty cylinders of chlorine gas should be isolated from operating areas, restrained in position to prevent upset, stored in rooms separate from ammonia storage and stored in areas not in direct sunlight or exposed to excessive heat.

#### **Written Response Required**

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1079005-002 - WELL 1 NORTH WELL	Source	Erosion was noted around the perimeter of Well slab #1 North. The site must be properly graded to prevent pathways for contamination. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
1079005-001 - WELL 2 SOUTH WELL	Source	Erosion was noted around the perimeter of Well slab #2 South. The site must be properly graded to prevent pathways for contamination. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
1079005-004 - Z WELL 4	Source	Z Well # 4 is connected to active distribution system; there is a steady flow and leak from the DS. This well must be properly plugged and abandoned in accordance with LDNR regulations. There shall be no pathway for contamination in the well discharge piping. The inoperable well shall be completely isolated from the production, treatment and distribution piping path, plugged and abandoned in accordance with LAC rules, regulations and standards. <b>See Attachment #7, #8 and #9</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Town of Cheneyville has not validated the colorimeter. The water systems hall obtain appropriate validation standards, measure and record validation checks at no more than 90-day intervals and retain these records. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with 24 mesh non-corrodible screen.
FACILITY	CATEGORY	FINDINGS
1079005-005 - WELL 5	Source	Corrosion was observed on the well discharge piping. The metal shall be cleaned, repaired, and painted to prevent further deterioration of the metal. <b>See Attachment #4 and #5</b>
FACILITY	CATEGORY	FINDINGS
1079005-005 - WELL 5	Source	The well vent is not properly installed. The vent is not downturned and screened. The vent must be downturned and a 4 mesh screen installed. <b>See Attachment #6</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - DISINFECTION	Treatment	Multiple chlorine bottles were observed unsecured. Chlorine gas bottles should be isolated from any non-compatible chemicals, stored in secure/restrained position so as not to be easily tipped over and not exposed to direct sunlight.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
FOREST HILL UTILITIES Public Water System  
PWS ID LA1079009  
RAPIDES Parish

Dear Mayor Jeter:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 10, 2018 sanitary survey inspection of the public water supply system for FOREST HILL UTILITIES (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Matthew Page	Ldh Oph Engineering Services
Bryan Butter	Village Of Forest Hill

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

No observations were recorded in this category.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED MAIN TOWER	Finished Water Storage	The main elevated storage tank is showing signs of corrosion and paint deterioration. The main elevated tower needs to be painted to protect the tank from further deterioration.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED MAIN TOWER	Finished Water Storage	The overflow on the main elevated storage tank discharges at a height below 12 inches above the ground surface. The discharge needs to be relocated to an elevation between 12 and 24 inches.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is the recommendation of the Department of Health that all storage facilities be inspected, cleaned, repaired, repainted, or replaced every 3-5 years or as needed.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Satellite Site	Security	A tree has fallen on the fence at the satellite site (Well 3 & 4). Repair the fence and notify this office when this item is completed.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	<p>An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been enforcing the CCCP and there were no current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.</p> <p>If needed, LDH can send more information on setting up the CCCP and enforcing the program. Also, Susan Robbins with LRWA (Susan.Robbins115@gmail.com) has served as a great technical resource for setting up cross-connection control programs and has previous experience helping many different water systems with enforcing the programs.</p>
FACILITY	CATEGORY	FINDINGS
1079023-003 - WELL 3 PALMER CHAPEL RD	Source	At the time of inspection, there seemed to be small openings in the well seal at Well 3. Fill in the openings in the well seal with silicone or other material to prevent the introduction of contamination into the well casing and notify this office once this item is completed.
FACILITY	CATEGORY	FINDINGS
1079023-004 - WELL 4	Source	At the time of inspection, there seemed to be small openings in the well seal for Well 4. Fill in the openings in the well seal with silicone or other material to prevent the introduction of contamination into the well casing and notify this office once this item is completed.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED BY OFFICE	Finished Water Storage	The elevated tank was missing a screen on the overflow pipe. Install a four mesh, non-corrodible screen on the elevated tank overflow pipe and notify this office once this item is completed.  The pressure gauge and vacuum breaker on the elevated tank were broken or in poor repair. Replace the pressure gauge and vacuum breaker on the elevated tank and notify this office once this item is completed.
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED HWY 107 AND 454	Finished Water Storage	The elevated tank overflow screen was blown out and needs to be replaced with a four mesh, non-corrodible screen. Please notify this office when this item is completed.
FACILITY	CATEGORY	FINDINGS
1079023-001 - WELL 1 BY CORNER OF LOT	Source	Well 1 (by the corner of the lot) did not have a pressure gauge upstream of the check valve. Install a pressure gauge upstream of the check valve and notify this office once completed.  Several well seal bolts were removed and not replaced after well work or some other activity. Replace all of the well seal bolts to ensure the seal is functioning properly.
FACILITY	CATEGORY	FINDINGS
1079023-002 - WELL 2 CLOSEST TO TANK	Source	Well 2 (closest to tank) did not have a pressure gauge upstream of the check valve. Install a pressure gauge upstream of the check valve and notify this office once completed.
FACILITY	CATEGORY	FINDINGS
1079023-003 - WELL 3 PALMER CHAPEL RD	Source	There are small sections around the well discharge piping concrete slab where the ground has signs of erosion. Fill the spots in so that the well site is properly graded and notify this office when this item is completed.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Distribution System	At the time of inspection, the system indicated that they had a flushing program, but it was not written down in a standard operating procedure. The flushing program should be written down as part of the record-keeping process, so that it may be reviewed by LDH and also new system personnel.
FACILITY	CATEGORY	FINDINGS
Well Sites	Maintenance	<p>The trees and vegetation are starting to become overgrown at both well sites. System personnel should take care to cut back overgrowth and monitor tall trees near the water system facilities during/after bad weather to reduce the potential hazard that falling trees and limbs present.</p> <p>In several spots on the water system piping, ants have made residence within the piping insulation. Please remove the insulation seasonally to deter ant domiciling and to inspect for potential pipe pitting, corrosion, or leaks underneath the insulation.</p>
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND AT OFFICE	Finished Water Storage	Some slight erosion was noted underneath the tank outlet line where it goes below grade. Please fill the hole in so that the site is graded properly.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED BY OFFICE	Finished Water Storage	<p>This office recommends that tanks be cleaned and inspected on a 3 to 5 year schedule.</p> <p>During the inspection, tree and/or small plant growth was noted near the elevated tank. Please take care to maintain the site landscaping and cut back the vegetation near the elevated tank.</p>
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED HWY 107 AND 454	Finished Water Storage	During the inspection, tree and/or small plant growth was noted near the elevated tank. Please take care to maintain the site landscaping and cut back the vegetation near the elevated tank.
FACILITY	CATEGORY	FINDINGS
EL003 - ELEVATED PALMER CHAPEL RD	Finished Water Storage	During the inspection, tree and/or small plant growth was noted near the elevated tank. Please take care to maintain the site landscaping and cut back the vegetation near the elevated tank.
FACILITY	CATEGORY	FINDINGS
TP003 - TREATMENT PLANT @ WELL #3	Treatment	<p>The chlorine gas cylinders are not properly secured. Full and empty cylinders of chlorine gas must be restrained in position at all times to prevent upset. Please properly secure all chlorine gas cylinders.</p> <p>The chlorine gas vent line was not equipped with a screen. Install a</p>

		<p>non-corrodible insect screen on the end of the chlorine gas vent line and notify this office once this item is completed.</p> <p>During the inspection, the chemical containers were noted to be open to the atmosphere through the top opening where the suction line enters the container. This office recommends sealing the opening to protect the integrity of the chemical feed process by making a small hole in the chemical container plug for the suction line to fit through and sealing around the gap with NSF-approved silicone, or other means.</p>
FACILITY	CATEGORY	FINDINGS
1079023-001 - WELL 1 BY CORNER OF LOT	Source	The well discharge piping appeared to have some areas of flaking paint. Paint protects the well discharge piping from pitting, corrosion, and future leaks. Please clean and paint the well discharge piping.
FACILITY	CATEGORY	FINDINGS
1079023-002 - WELL 2 CLOSEST TO TANK	Source	<p>The well discharge piping appeared to have some areas of flaking paint. Paint protects the well discharge piping from pitting, corrosion, and future leaks. Please clean and paint the well discharge piping.</p> <p>During the inspection, the well concrete slab was covered by fallen leaves and pine straw. Please clear the concrete slab and take care to clean the slab off periodically as part of general site maintenance.</p>
FACILITY	CATEGORY	FINDINGS
1079023-003 - WELL 3 PALMER CHAPEL RD	Source	The well discharge piping appeared to have some areas of flaking paint. Paint protects the well discharge piping from pitting, corrosion, and future leaks. Please clean and paint the well discharge piping.
FACILITY	CATEGORY	FINDINGS
1079023-004 - WELL 4	Source	The well discharge piping appeared to have some areas of flaking paint. Paint protects the well discharge piping from pitting, corrosion, and future leaks. Please clean and paint the well discharge piping.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

No observations were recorded in this category.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system did not have all bacteriological (Bac-T) sample results available from October 2016 to May 2018. The water system shall print and retain copie of Bac-T results for a minimum of 10 years.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system did not have the calibration standards to properly validate the bench top colorimeter. A low and high range set of calibration standards should be obtained.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Valid daily chlorine residual measurements for the POE and MRT were not provided and the daily chlorine residual was taken at the ACR as representative MRT results. The water system shall install a compliant POE sample tap downstream of the service meter from Latanier WS. The water system shall begin collecting samples from the MPP listed MRT sample site.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	Valid sample tap for the POE is not present in the WS. An accessible POE sample tap shall be installed prior to the first customer on the water system. The water system shall begin collecting chlorine residuals from the POE.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to

correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

RAPIDES Parish

Dear Mr. Butler, II:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 11, 2018 sanitary survey inspection of the public water supply system for TOWN of WOODWORTH WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

**Name**

Matthew Page  
Glenda Guimbellot  
Douglas Johnson

**Organization**

Ldh Oph Engineering Services  
Town Of Woodworth  
Town Of Woodworth Water System

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

No observations were recorded in this category.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
GR002 - GROUND FIRE	Finished Water Storage	The overflow on the ground storage tank is less than 12 inches above the ground surface. The overflow needs to be relocated to be between 12-24 inches above the ground surface.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND OLD	Finished Water Storage	The overflow on the ground storage tank is less than 12 inches above the ground surface. The overflow needs to be relocated to be between 12-24 inches above the ground surface.
FACILITY	CATEGORY	FINDINGS
1079027-001 - WELL 1	Source	A means of measuring flow needs to be added to well 1.
FACILITY	CATEGORY	FINDINGS
1079027-002 - WELL 2	Source	A means of measuring flow needs to be added to well 2.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is the recommendation of the Department of Health that all storage facilities be inspected, cleaned, repaired, repainted, or replaced every 3-5 years or as needed.
FACILITY	CATEGORY	FINDINGS
TP001 - DISINFECTION WELL 1	Treatment	It is the recommendation of the Department of Health that the chlorine room have a shatter resistant inspection window installed on the wall or door.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Central Region VI  
Attn: Matthew Page,  
5604-B Coliseum Blvd.  
Alexandria, Louisiana 71303

The following compliance history is provided for your information

### **Bacteriological Sampling History**

#### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

### **Violation History**

#### **Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

#### **Maximum Contaminant Level (MCL) Violations during the past year**

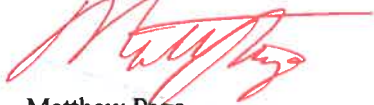

No maximum contaminant level violations were reported in the past year.

#### **Other Violations during the past year**

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 318-484-2388.

Respectfully,

Matthew Page,

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	In order to protect its water supply from potential contamination, each water supplier shall develop and implement a written backflow prevention plan outlining the policies and procedures it will use to verify that its customers comply with mandatory containment practices, and shall make a reasonable effort to ensure that only customers who comply with mandatory containment practices connect or remain connected to its water supply. The water system will develop and maintain a written backflow prevention plan.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily. An additional chlorine residual check must be made monthly at the ACR site. These points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free/total chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Please start measuring and recording the residuals at the locations described using a digital chlorine analyzer. Residuals must also be recorded on signed and dated "LDH Approved Chlorine Residual Forms", which can be found at: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> Daily chlorine residuals were not being monitored or recorded on weekends and holidays. The water system shall begin monitoring and recording chlorine residuals on weekends and holidays.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Records of Calibrations/Validations. Records of calibrations/validations on each bench top

		spectrophotometer/colorimeter used for disinfectant residual monitoring and on each continuous disinfectant residual monitor shall be maintained for at least three years, as follows.1.Records of bench top spectrophotometers/ colorimeters shall include meter location, meter identification, dates and results of NIST traceable standard solution, dates of calibration/validation and the name of the person performing the calibration/validation. The water system could not provide a record showing calibrations/validations of the bench top colorimeters. A calibration log shall be created and maintained.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system did not have the standards to properly calibrate their bench top colorimeters. A low range and high range set of calibration standards shall be obtained from an approved source.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	See Attachment #2 and #1
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	From review the finished water storage facilities (elevated towers, ground storage tanks, and hydro-pneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection. The water system will arrange for the elevated tank to be inspected.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	From review the finished water storage facilities (elevated towers, ground storage tanks, and hydro-pneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage

		facilities could benefit from an inspection. The water system will arrange for the ground storage tank to be inspected.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

There are no unresolved significant deficiencies discovered from previous surveys.

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water system is not equipped with a source of dedicated standby power at each well. The water system should explore every effort to obtain dedicated standby power.
FACILITY	CATEGORY	FINDINGS
1079032-002 - WELL 2	Source	The well slab is showing signs of spalling. The well shall be provided with a watertight cover constructed of concrete at least 4 inches thick and 2.5 feet in all directions. The cover must be graded to drain away from casing. Repair the cracked concrete slab to prevent further deterioration or any potential contamination into the well.

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	From review the finished water storage facilities (elevated towers) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
1079032-002 - WELL 2	Source	The screening on the air release-vacuum relief valve is damaged. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screen to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1079032-002 - WELL 2	Source	The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
1079032-002 - WELL 2	Source	The well is not equipped with a pressure gauge. A pressure gauge must be provided.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - DISINFECTION WELL 1	Treatment	Full and empty cylinders of chlorine gas should be isolated from operating areas, restrained in position to prevent upset, stored in rooms separate from ammonia storage, and stored in areas not in direct sunlight or exposed to excessive heat. Chlorine cylinders were restrained with a single chain. It is recommended to chain each cylinder individually to prevent upset.
FACILITY	CATEGORY	FINDINGS
TP002 - DISINFECTION WELL 2	Treatment	Full and empty cylinders of chlorine gas should be isolated from operating areas, restrained in position to prevent upset, stored in rooms separate from ammonia storage, and stored in areas not in direct sunlight or exposed to excessive heat. Chlorine cylinders were restrained with a single chain. It is recommended to chain each cylinder individually to prevent upset.
FACILITY	CATEGORY	FINDINGS
TP001 - DISINFECTION WELL 1	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.
FACILITY	CATEGORY	FINDINGS
TP002 - DISINFECTION WELL 2	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system did not have a formal cross connection control program in place. The water system shall implement a formal cross connection control program. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	The level gauge on the ground storage tank had been abandoned but not sealed and could provide the entrance of small animals or insects into the storage tank. The level gauge shall be sealed. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material.
FACILITY	CATEGORY	FINDINGS
1081009-001 - WELL #1	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. The seal on the well casing was loose and shall be sealed to prevent a pathway for contamination.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	At the time of the inspection, the overflow piping ended at the top of the of the storage tank. All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	The storage tank had slight signs of rust and should be painted soon to uphold the integrity of the structure. Proper protection shall be given to metal surfaces by paints or other protective coatings, by cathodic protective devices, or by both.
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT CH RD	Treatment	At the time of the inspection, there was no air inlet in the chlorine building on site. Where chlorine gas is used, the room shall be constructed to provide the following: air inlets should be through louvers near the ceiling.

FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT CH RD	Treatment	At the time of the inspection, there was no ventilating fan in the chlorine building. A ventilating fan shall be provided at the bottom of the chlorine house. Where chlorine gas is used, the room shall be constructed to provide the following: each room shall have a ventilating fan with capacity which provides one complete air change per minute when the room is occupied.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII  
Attn: James Soileau,  
1525 Fairfield Ave. Room 569  
Shreveport, Louisiana 71101

The following compliance history is provided for your information

#### **Bacteriological Sampling History**

##### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 318-676-5422.

Respectfully,

A handwritten signature in black ink, reading "James Soileau". The signature is written in a cursive, flowing style.

Office of Public Health

CERTIFIED MAIL: 7016 3560 0000 0462 0813 - RETURN RECEIPT REQUESTED

May 31, 2018

Dean Cotton  
Hickory Grove Water System  
4760 Hwy 507  
Coushatta, LA 71019

Re: Class I Sanitary Survey  
Hickory Grove Water System  
PWS ID LA1081010  
Red River Parish

Dear Mr. Cotton:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 21, 2018 sanitary survey inspection of the public water supply system for Hickory Grove Water System (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
James Soileau	LDH-OPH Region 7
Dean Cotton	Hickory Grove Water System

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	An approved chemical laboratory/drinking water shall perform all analyses using the laboratory methodology specifically required to be used under the provisions of the State Sanitary Code for such analyte. The system was not using the approved methodology for the measurement of chloramines, total chlorine, free chlorine, free ammonia or nitrite.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control program has been implemented for this water system. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1081010-001 - WELL #1 (PLANT)	Source	The screen on the vent was not 24-mesh. The screen shall be replaced with 24 mesh. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1081010-003 - WELL #3	Source	The screen on the vent was torn off slightly, and the electrical box was uncovered, had holes in the back and had significant dirt inside of the box. The screen shall be fixed so that no insect can enter into the vent, and the electrical box shall have the cover reinstalled, the dirt shall be removed, and the holes in the back shall be sealed. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1081010-002 - WELL #2 (EAST OF PLANT)	Source	The well seal was not flush on the casing, allowing for the entrance of small insects into the well casing. The sanitary seal shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1081010-004 - WELL #4	Source	There were holes in the back of the electrical box, there was a hole in the sanitary seal, and there was an old pressure gauge that was easily removed from the well casing which, after removed, made a significant pathway for contamination. The holes in the electrical box shall be sealed, the hole in the sanitary seal shall be sealed and the old pressure gauge should be removed and the hole made from removing it shall be sealed. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained

		to prevent the introduction of contamination into the well casing and discharge piping.
--	--	---

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND TANK	Finished Water Storage	The overflow piping ended at the top of the storage tank and did not have a 24 mesh screen on it. All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.
FACILITY	CATEGORY	FINDINGS
1081010-001 - WELL #1 (PLANT)	Source	There was no flow meter on the discharge piping, and the pressure gauge was not in working order. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.
FACILITY	CATEGORY	FINDINGS
1081010-002 - WELL #2 (EAST OF PLANT)	Source	There was no flow meter on the discharge piping. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.
FACILITY	CATEGORY	FINDINGS
1081010-003 - WELL #3	Source	There was no flow meter on the discharge piping. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The battery for the onsite generator was dead. The battery should be replaced. Dedicated Standby power shall be required by the reviewing authority so that water may be treated and/or pumped to the distribution system during outages to meet the average day demand. To ensure continuous service when the primary power has been interrupted, a standby power supply shall be provided through connection to at least two independent public power sources, or portable or in-place auxiliary power
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT SCOTT RD OFF HWY 507	Treatment	The light bulbs in both the chlorination and ammonia addition buildings were out. The lightbulbs should be replaced.
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT SCOTT RD OFF HWY 507	Treatment	There were multiple empty chemical bins on site. These bins shall be disposed of or stored in a proper location. Provisions shall be made for disposing of empty bags, drums or barrels by an approved procedure which will minimize exposure to dusts.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII  
Attn: James Soileau,

Re: Class 2 Follow-Up Sanitary Survey Site Visit  
Hickory Grove Water System Public Water System  
PWS ID LA1081010  
Red River Parish

Dear Ms. Scott:

The Department of Health and Hospitals would like to thank you and the site visit participants for the courtesy and assistance provided during the December 17, 2018 Follow-Up Sanitary Survey inspection of the public water supply Hickory Grove Water System. These inspections are part of our program to ensure compliance with the EPA Code of Federal Regulations Title 40 Parts 141-142 and Title 51 of the Louisiana Administrative Code.

This letter provides a summary of items noted in previous sanitary surveys in addition to during this follow-up sanitary survey. If significant deficiencies have been listed on the subsequent pages you are required to correct the deficiencies and provide written documentation of your corrective actions including the date(s) resolved. You may also request additional time beyond the 60 days in writing by providing a detailed plan of corrective action that includes proposed completion dates. Failure to respond to this letter in writing within 60 days of receipt may result in Enforcement Action.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water supply is not maintaining the ammonia required with their state issued permit. The ammonia feeder should be inspected to assure that the ammonia is being fed at the same rate that is stated on the ammonia meter. Dosage calculations for chlorine and ammonia should be performed as well to ensure the proper ratio of chemicals is being applied. No public water supply shall be hereafter constructed, operated or modified to the extent that the capacity, hydraulic conditions, functioning of treatment processes, or the quality of finished water is affected, without, and except in accordance with the plans and specifications for the installation which have been approved, in advance, as part of a permit submitted by the person having responsible charge of a municipality owned public water supply or by the owner of a privately owned public water supply. The permit shall be issued by the state health officer prior to the start of such construction or modification.

The deficiencies listed in the above table titled “**NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS**” must be corrected and a written response submitted to the department within 60 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

**The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the DHH-OPH Enforcement Units. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided by the Public Water System to the Surveying Office within 60 days of receipt of this letter with details regarding your corrective actions and any time extensions you may propose or you will be cited with a Treatment Technique violation which requires you to notify your consumers of the violation incurred.**

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

DHH/OPH Engineering Services – Northwest Region VII  
Attn: James Soileau,  
1525 Fairfield Ave. Room 569

August 23, 2018

Kevin Conly  
Social Springs Water System South  
294 Highway 371  
Ringgold, LA 71068

Re: Class I Sanitary Survey  
Social Springs Water System South  
PWS ID LA1081011  
Red River Parish

Dear Mr. Conly:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 6, 2018 sanitary survey inspection of the public water supply system for SOCIAL SPRINGS WATER SYSTEM SOUTH (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## Parties Present

Name	Organization
James Soileau	LDH-OPH Region 7
Barbara Griffith	Social Springs Water Systems

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
CC001 - EMERGENCY CONNECTION TO LA1081009	Source	Social Springs North and South are interconnected in order to provide water in case of an emergency. The systems are also interconnected in order to meet the second source requirement for groundwater systems. However, it was noted that the existing well at Social Springs South may not be of adequate capacity to act as a backup supply to Social Springs North. The system must increase capacity in order to insure continuous service in the event of an emergency. When groundwater is the only source of water supply for any community water supply or for any non-community water supply serving a hospital, a minimum of two approved and active groundwater wells( or, if not a second well, connection to another approved water supply of sufficient capacity) shall be provided, unless and LDH-approved annual public notice is provided to customers.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system did not have a formal cross connection control program in place. The water system shall implement a formal cross connection control program. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND TANK	Finished Water Storage	The level gauge on the ground storage tank had been abandoned but not sealed and could provide the entrance of small animals or insects into the storage tank. The level gauge shall be sealed. The overflow piping was also not sealed and had a wasp nest inside of it. The wasp nest and any other contaminating material shall be removed and the pipe shall be sealed. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material.
FACILITY	CATEGORY	FINDINGS
1081011-001 - WELL #1	Source	The sanitary seal on the well casing has deteriorated slightly and shall be re sealed. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT HWY 514	Treatment	The aqua ammonia room shall be equipped as in Section 5.4.1 with the following changes: An exhaust fan shall be installed to withdraw air from high points in the room and makeup air shall be allowed to enter at a low point.

**The significant deficiencies listed in the above table titled ‘Significant Deficiencies’ must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT HWY 514	Treatment	The Ammonia tank was located in the pump house at the time of the inspection. Aqua ammonia feed pumps and storage should be enclosed and separated from other operating areas.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII  
Attn: James Soileau,  
1525 Fairfield Ave. Room 569  
Shreveport, Louisiana 71101

The following compliance history is provided for your information

### **Bacteriological Sampling History**

#### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 318-676-5422.

Respectfully,

A handwritten signature in black ink, reading "James Soileau III". The signature is fluid and cursive, with the first name "James" being the most prominent part.

October 12, 2018

Mr. Ronnie Cox, President  
Fairview Union Water System  
P.O. Box 95  
Campti, LA 71411

Re: Annual Water Treatment Plant Site Visit  
Fairview Union Water System (PWS ID# 1081012)  
Red River Parish, Louisiana

Dear Mr. Cox:

On September 27, 2018, a water treatment plant site visit was performed at the above referenced water system. I would like to thank Mr. Donald Messick for his assistance during the visit.

1. A review of the records indicates the water system has multiple non-compliance issues regarding DDBPs. The system must investigate options to insure that DDBP levels are below the MCL.
2. LAC 51:XII.1109.Calibration and Validation of Disinfectant Residual Analyzers
  - A. *Validation of Bench Top Disinfectant Residual Spectrophotometers/Colorimeters. The accuracy of bench top spectrophotometers/colorimeters used for disinfectant residual monitoring, particularly for validation of continuous disinfectant residual monitors, shall be determined at a frequency of no less than once every 90 days by use of a NIST traceable standard solution which has been obtained from an approved source (e.g., certificate of analysis by manufacturer). Deviations of  $\pm 10$  percent or more shall be cause for calibration of the equipment. The instruments shall be calibrated in accord with the manufacturer's instructions. After calibration the instrument's accuracy shall be validated prior to return to service.*
  - B. *Validation/Standardization Using Other Methods. For approved methods for disinfectant residual analysis other than spectrophotometric/colorimetric methods, validation/standardization of disinfectant residual analyzers shall be performed in accord with procedures outlined in the particular method [see §1105.C].*
  - C. *Validation of Continuous Disinfectant Residual Monitors. The accuracy of residual disinfectant measurements from any continuous disinfectant residual monitor shall be validated weekly. Validation shall be performed by collecting a grab sample from the tubing supplying water to the monitor (e.g., via a tee connection which is normally capped or valved closed) at a location immediately upstream (less than 5 feet) of the continuous disinfectant residual monitor. Such grab sample shall be analyzed using a bench top spectrophotometer/colorimeter which has been calibrated*

*according to §1109.A of this Chapter. If the spectrophotometer/colorimeter reading indicates  $\pm 10$  percent or more deviation as compared to the continuous disinfectant residual monitor reading, the cause of the disparity shall be investigated and resolved within five working days. In the meantime, grab samples shall be collected and analyzed every two hours as per §1125.B of this Chapter. The accuracy of residual disinfectant measurements from any replacement instrument shall be validated prior to service or return to service.*

- D. *Records of Calibrations/Validations. Records of calibrations/validations on each bench top spectrophotometer/colorimeter used for disinfectant residual monitoring and on each continuous disinfectant residual monitor shall be maintained for at least three years, as follows.*
1. *Records of bench top spectrophotometers/ colorimeters shall include meter location, meter identification, dates and results of NIST traceable standard solution, dates of calibration/ validation and the name of the person performing the calibration/ validation.*
  2. *Records of continuous disinfectant residual monitors shall include meter location, unique meter identification (e.g., model and serial number), dates and results of calibration/ validation, and the corrective actions taken when deviations of  $\pm 10$  percent or more occur.*

At the time of the site visit, the Chlorine Pocket Colorimeter was not properly validated. The disinfectant analyzer must be validated on a weekly basis for data accuracy. If the validation failed, then the instrument must be calibrated in accord with the manufacturer's instructions. Validation and calibration records must be kept for at least three years.

**Submit monthly validation and calibration records to this office with monthly operating reports. Continue to submit the validation and calibration records until May 31, 2019.**

The cooperation and assistance provided during the course of the site visit was greatly appreciated. If I can be of further assistance, please contact me at 318-676-7434 or [Zahira.Tieso@la.gov](mailto:Zahira.Tieso@la.gov).

Sincerely,

Zahira Tieso, P.E.

RICHLAND Parish

Dear Mr. Natt:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the February 19, 2018 sanitary survey inspection of the public water supply system for MANGHAM WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

Name	Organization
Charles Gooch	LDH/OPH Engineering Services
Bill McVay	Mangham Water System

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

"An Equal Opportunity Employer"

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1083005-002 - WELL #2	Source	At the time of inspection, no screen was found on the overflow piping of the well. A screen must be installed on the overflow piping. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1083005-003 - WELL #3	Source	At the time of inspection, the screen on the well vent was damaged and needs to be replaced. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1083005-002 - WELL #2	Source	The sample tap on the well discharge piping is of the threaded nozzle type and must be replaced with a smooth nozzle type. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the disinfection residual monitoring equipment did not meet the standards set in the State Sanitary Code. Chlorine residuals shall be measured in accordance with the analytical methods set forth in Section 1105.C of this Part.
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED TANK NO. 2	Finished Water Storage	At the time of inspection, the splash pad was small and ineffective at preventing erosion from the overflow. The hole from the erosion needs to be filled and an adequate splash pad must be installed. The area surrounding a ground-level structure shall be graded in a manner that will prevent surface water from standing within 50 feet of it.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

"An Equal Opportunity Employer"

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The system does not have a cross connection control program. The system must adopt and implement a cross connection control program. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	At the time of inspection, the overflow pipe did not have a screen. A screen must be secured to the overflow piping. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. Openings or vents shall face downward and shall be not less than 2 feet above the floor of a pump room, the roof or cover of a tank, the ground surface or the surface of other water supply structures.
FACILITY	CATEGORY	FINDINGS
1083016-002 - WELL #2	Source	At the time of inspection, the sample tap on the discharge line was threaded. The system must

		replace this tap with a smooth nozzle tap. All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction.
--	--	---

### Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1	Treatment	At the time of inspection, sodium hypochlorite and zinc orthophosphate were being stored in a single room. The system must put in place some form of a retention wall to separate the chemicals in case of a spill.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### Written Response Required

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	The metal piping in the treatment plant, specifically the piping connected to the pumps, is in poor condition due to heavy corrosion. The piping in poor condition needs to be inspected and replaced as appropriate. A critical water system component is in poor condition or defective and indicative of failure or imminent failure. Component failure is expected to critically impact the quality and/or quantity of produced water.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	At the time of inspection, it was noticed that the system had new filters in place and new water lines were being placed without a permit. No public water supply shall be hereafter constructed, operated or modified to the extent that the capacity, hydraulic conditions, functioning of treatment processes, or the quality of finished water is affected, without, and except in accordance with the plans and specifications for the installation which have been approved, in advance, as part of a permit submitted by the person having responsible charge of a municipality owned public water supply or by the owner of a privately owned public water supply. The permit shall be issued by the state health officer prior to the start of such construction or modification.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, the water system did not have a cross connection control program. Each water supplier shall protect the water produced

		and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1083017-002 - WELL #2	Source	At the time of inspection, the discharge piping was being braced by stacked empty buckets. The discharge piping must be provided with a permanent and sturdy bracing. The discharge piping shall have all exposed piping, valves and appurtenances protected against physical damage.
FACILITY	CATEGORY	FINDINGS
1083017-002 - WELL #2	Source	The sample tap on the well discharge piping is located downstream of the check valve. The sample tap must be moved upstream of the check valve. All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line, check valve, and shall terminate in a downward direction.
FACILITY	CATEGORY	FINDINGS
1083017-002 - WELL #2	Source	The well does not have a flow meter and the current check valve does not meet the state standards. The well discharge

		piping must be equipped with a flow meter and certified check valve. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.
FACILITY	CATEGORY	FINDINGS
1083017-002 - WELL #2	Source	The well head was in poor repair and the sanitary seal was broken. The well head must be serviced, cleaned, and a sealed. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, it was found that the daily chlorine residual data was taken incorrectly. When the colorimeter is showing a 2.2 mg/L residual on the low range setting, the chlorine residual must be retaken using the high range procedure.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	Threaded sampling taps were located at the hydropneumatic tanks and must be replaced with smooth nosed sampling taps. Smooth-nosed sampling tap(s) shall be provided to facilitate collection of water samples for both bacteriological and chemical analyses. The sample tap(s) shall be easily accessible.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT	Treatment	Threaded sample taps were used throughout the treatment plant. The threaded taps must be replaced with smooth nosed taps. Sample taps shall be provided so that water samples can be obtained from appropriate locations in each unit of operation of treatment, and from the finished water. Taps shall be consistent with sampling needs and shall not be of the petcock type. Taps used for obtaining samples for bacteriological analysis shall be of the smooth-nosed type without interior or exterior threads, shall not be of the mixing type, and shall not have a screen, aerator, or other such appurtenance.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class 2 Follow-Up Sanitary Survey Site Visit  
City of Many Water System  
PWS ID LA1085016  
Sabine Parish

Dear Mayor Freeman:

The Department of Health and Hospitals would like to thank you and the site visit participants for the courtesy and assistance provided during the December 18, 2018 Follow-Up Sanitary Survey inspection of the public water supply City of Many Water System. These inspections are part of our program to ensure compliance with the EPA Code of Federal Regulations Title 40 Parts 141-142 and Title 51 of the Louisiana Administrative Code.

This letter provides a summary of items noted in previous sanitary surveys in addition to during this follow-up sanitary survey. If significant deficiencies have been listed on the subsequent pages you are required to correct the deficiencies and provide written documentation of your corrective actions including the date(s) resolved. You may also request additional time beyond the 60 days in writing by providing a detailed plan of corrective action that includes proposed completion dates. Failure to respond to this letter in writing within 60 days of receipt may result in Enforcement Action.

#### Parties Present

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods. This deficiency was also cited on the formal enforcement survey conducted on 4/29/2013.
FACILITY	CATEGORY	FINDINGS
1085017-004 - WELL #4, OLD MAIN PLANT YARD	Source	Well #4 vent was not screened. Screen must be installed to prevent the introduction of contamination into the well casing. This deficiency was also cited on the sanitary survey conducted on 1/28/2015.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT	Treatment	The ventilating fan located in the chlorine building at the Main Plant was not working. The ventilating fan must be repaired or replaced.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

A review of the water system's compliance history notes that 8 of 12 months for the previous year the State Minimum Chlorine Residual was not maintained. All public water systems must maintain a minimum chlorine residual of 0.5 mg/L measured as free for chlorine systems and total for chloraminated systems) at all points throughout the distribution system including storage facilities and dead ends. Water System management and operators should explore options for consistently maintaining adequate chlorine residuals in the distribution system.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII

Sabine Parish

Dear Mr. Woods:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the February 12, 2018 sanitary survey inspection for EBARB WWKS DIST #1 - NORTH EBARB. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

**No observations were recorded in this category.**

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
TP003 - SWINDOLL DRIVE PLANT	Treatment	The ventilating fan located in the chlorine building at Swindoll Drive Plant was not working. The ventilating fan must be repaired or replaced.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

The water system should implement a storage tank maintenance program that includes inspection, cleaning, repairs, and, if needed, painting of storage tanks on a 3-5 year cycle.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class 2 Follow-Up Sanitary Survey Site Visit  
Pendleton Water Association  
PWS ID LA1085046  
Sabine Parish

Dear Mr. Davis:

The Department of Health and Hospitals would like to thank you and the site visit participants for the courtesy and assistance provided during the December 10, 2018 Follow-Up Sanitary Survey inspection of the public water supply Pendleton Water Association. These inspections are part of our program to ensure compliance with the EPA Code of Federal Regulations Title 40 Parts 141-142 and Title 51 of the Louisiana Administrative Code.

This letter provides a summary of items noted in previous sanitary surveys in addition to during this follow-up sanitary survey. If significant deficiencies have been listed on the subsequent pages you are required to correct the deficiencies and provide written documentation of your corrective actions including the date(s) resolved. You may also request additional time beyond the 60 days in writing by providing a detailed plan of corrective action that includes proposed completion dates. Failure to respond to this letter in writing within 60 days of receipt may result in Enforcement Action.

### **NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS**

Based upon review of the available records and visual examination of the facilities, the following deficiencies require your immediate attention.

#### **Unresolved Observations – Deficiencies cited during previous site visits**

Visit Date	Notify Date	Reason	Severity	Category	Facility
01/27/2015	03/12/2015	Sanitary Survey, Finished	Minor	M&R and Data Verification	Management
<b>Comments:</b> It appears that the highest turbidity recorded at any time for the combined filter effluent is 0.09 NTU. While that information might be correct, sometimes chart recorders and online equipment will not record over a set number. Please research and make sure that the turbidimeter is recording all the way to the maximum turbidity leaving the filters.					

#### **Significant Deficiencies**

No observations were recorded in this category.

#### **Minor Deficiencies**

No observations were recorded in this category.

The deficiencies listed in the above table titled “**NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS**” must be corrected and a written response submitted to the department within 60 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the DHH-OPH Enforcement Units. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided by the Public Water System to the Surveying Office within 60 days of receipt of this letter with details regarding your corrective actions and any time extensions you may propose or you will be cited with a Treatment Technique violation which requires you to notify your consumers of the violation incurred.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There is a water pipe segment in the direct filtration building that show signs of corrosion. This corrosion can result in leaks if not treated. The water pipes must be cleaned and treated to prevent further corrosion.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

DHH/OPH Engineering Services – Northwest Region VII  
Attn: James Soileau, E.I.  
1525 Fairfield Ave. Room 569

### NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS

Based upon review of the available records and visual examination of the facilities, the following deficiencies require your immediate attention.

#### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water supply is operating as a free chlorine system outside of their state-issued permit of a chloramines system. No public water supply shall be hereafter constructed, operated or modified to the extent that the capacity, hydraulic conditions, functioning of treatment processes, or the quality of finished water is affected, without, and except in accordance with the plans and specifications for the installation which have been approved, in advance, as part of a permit submitted by the person having responsible charge of a municipality owned public water supply or by the owner of a privately owned public water supply. The permit shall be issued by the state health officer prior to the start of such construction or modification.

The deficiencies listed in the above table titled **“NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS”** must be corrected and a written response submitted to the department within 60 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the DHH-OPH Enforcement Units. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided by the Public Water System to the Surveying Office within 60 days of receipt of this letter with details regarding your corrective actions and any time

**extensions you may propose or you will be cited with a Treatment Technique violation which requires you to notify your consumers of the violation incurred.**

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

*It is recommended that South Toledo Bend Water District maintain records in a more organized manner. Some records seemed to be difficult for the water system to locate at the time of the inspection.*

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
EBARB WWKS DIST # 1 - N EBARB/Belmont  
PWS ID LA1085058  
Sabine Parish

Dear Mr. Woods:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the January 29, 2018 sanitary survey inspection for EBARB WWKS District #1 - N EBARB/Belmont. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

Name	Organization
Zahira Tieso	LDH-OPH District IV Engineering
Gilberto Limon	EBARB Water District

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

#### Significant Deficiencies

No observations were recorded in this category.

### **Deficiencies**

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

A review of the water system's compliance history notes that 8 of 12 months for the previous year the State Minimum Chlorine Residual was not maintained. All public water systems must maintain a minimum chlorine residual of 0.5 mg/L measured as free for chlorine systems and total for chloraminated systems) at all points throughout the distribution system including storage facilities and dead ends. Water System management and operators should explore options for consistently maintaining adequate chlorine residuals in the distribution system.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII  
Attn: Zahira Tieso, E.I.

Re: Class I Sanitary Survey  
EBARB WWKS DIST # 1 - AIMWELL AREA  
PWS ID LA1085059  
Sabine Parish

Dear Mr. Woods:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the February 12, 2018 sanitary survey inspection for EBARB WWKS DIST # 1 - AIMWELL AREA. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

Name	Organization
Zahira Tieso	LDH-OPH District IV Engineering
Gilberto Limon	EBARB Water District

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

#### **Significant Deficiencies**

**No observations were recorded in this category.**

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - AIMWELL ELEVATED ST TANK (OFFICE)	Finished Water Storage	The elevated tank located at 23387 LA-191 in Zwolle shows signs of corrosion. The elevated tank should be inspected, cleaned, and repainted to prevent future deterioration of the water installation.

**The significant deficiencies listed in the above table titled ‘Significant Deficiencies’ must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

The Ground Water Storage Tank and the Hydropneumatic Tank located at 33905 Hwy 191 in Many, LA should be inspected and cleaned.

The water system should implement a storage tank maintenance program that includes inspection, cleaning, repairs, and, if needed, painting of storage tanks on a 3-5 year cycle.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

## **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
03/16/2016	05/27/2016	Sanitary Survey, Finished	Minor	Finished Water Storage	EL002-MERAUX 0.5 MG
<p><b>Comments:</b> The Meraux Tower has an overflow pipe that is laying on the ground with no screen.</p> <p>The over flow pipe was also valved off. With the valve closed the overflow would not be able to perform as designed and prevent the tower from overfill, which may cause structural damage to the tower.</p> <p>The over flow pipe needs to be screened and placed at a proper elevation from grade.</p> <p>The overflow for an elevated tank shall open downward and be screened with a four mesh, non-corrodible screen. The screen shall be installed within the overflow pipe at a location least susceptible to damage by vandalism. If a flapper is used, a screen shall be provided inside the valve.</p>					
Visit Date	Notify Date	Reason	Severity	Category	Facility
03/16/2016	05/27/2016	Sanitary Survey, Finished	Minor	Treatment	TP003-2014 NEW SURFACE WATER TREATMENT PLANT
<p><b>Comments:</b> The Toca booster station does not have a water flow meter to measure the flowrate of the water being treated. This is needed to determine the doseages being applied so that the max doesages of the chemicals are not exceeded.</p> <p>St. Bernard shall install a water flow meter for the water that is being booster chlorinated that is leaving the TOCA booster station.</p> <p>A means to measure the flow stream being dosed shall be provided in order to determine chemical feed rates.</p>					
Visit Date	Notify Date	Reason	Severity	Category	Facility
03/16/2016	05/27/2016	Sanitary Survey, Finished	Minor	Treatment	TP003-2014 NEW SURFACE WATER TREATMENT PLANT

**Comments:** The TMB 930 chemical currently does not have a chemical liquid level indicator that can provide meaningful results. Currently there is no spill containment, vent or overflow for the TMB 930 chemical.

A liquid level indicator, vent, and overflow capability must be provided for the chemical storage tank.

The chemical dilution tanks overflow valve was valved off.

All overflows need to have their valves opened and functional as designed.

Liquid chemical storage tanks must have a liquid level indicator and have an overflow and a receiving basin capable of receiving accidental spills or overflows without uncontrolled discharge. a common receiving basin may be provided for each group or compatible chemicals, that provides sufficient containment volume to prevent accidental discharge in the event of failure of the largest tank.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	<p>The small ground storage tank at the St. Bernard water treatment plant is leaking water from its side.</p> <p>All potable water systems shall be designed, constructed and maintained so as to prevent leakage of water due to defective materials, improper jointing, corrosion, settling, impacts, freezing, or other causes. Valves and blow-offs shall be provided so that necessary repairs can be made with a minimum interruption of service.</p>
FACILITY	CATEGORY	FINDINGS
Management	Security	<p>The Yscloskey tower fence was not closeable at time of inspection.</p> <p>The Toca ground storage tank grounds had signs of intrusion.</p> <p>Security; All public water supply wells, treatment units, tanks, hatches etc., shall be located inside a fenced area, capable of being locked and areas shall be locked when unattended. The fence shall be resistant to climbing and at least 6 feet high.</p>
FACILITY	CATEGORY	FINDINGS
EL001 - ARABI TANK 1.0 MG	Finished Water Storage	<p>The Arabi tower overflow and drain is connected directly to the storm drain.</p> <p>LAC 51:XII.319.D.19 - No drain on a water storage structure shall have a direct connection to a sewer or storm drain. The design shall allow draining the storage facility for cleaning or maintenance without causing loss of pressure in the distribution system.</p>

FACILITY	CATEGORY	FINDINGS
EL006 - DELACROIX 0.1 MG	Finished Water Storage	The Delacroix tower overflow does not have a screen.  LAC 51:XII.337.C - "Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. Openings or vents shall face downward and shall be not less than 2 feet above the floor of a pump room, the roof or cover of a tank, the ground surface or the surface of other water supply structures."
FACILITY	CATEGORY	FINDINGS
EL002 - MERAUX 0.5 MG	Finished Water Storage	The Meraux tower overflow does not have a screen.  LAC 51:XII.337.C - "Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. Openings or vents shall face downward and shall be not less than 2 feet above the floor of a pump room, the roof or cover of a tank, the ground surface or the surface of other water supply structures."
FACILITY	CATEGORY	FINDINGS
EL004 - NEW REGGIO 0.5 MG	Finished Water Storage	The Reggio tower overflow screen was broken at time of inspection.  LAC 51:XII.337.C - "Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. Openings or vents shall face downward and shall be not less than 2 feet above the floor of a pump room, the roof or cover of a tank, the ground surface or the surface of other water supply structures."
FACILITY	CATEGORY	FINDINGS
GR001 - OLD GROUND AT PLANT 3.0 MG	Finished Water Storage	The small ground storage tank overflow at the St. Bernard water treatment plant flows from the tank underground, and into the adjacent drainage canal. The discharge from the tank is below the flood level rim of the canal and presents a potential cross connection.  LAC 51:XII.319.D.19 - No drain on a water storage structure shall have a direct connection to a sewer or storm drain. The design shall allow draining the storage facility for cleaning or maintenance without causing loss of pressure in the distribution system.
FACILITY	CATEGORY	FINDINGS
EL007 - ST BERNARD TOWER 0.5 MG	Finished Water Storage	The St. Bernard tower overflow does not have a screen.  LAC 51:XII.337.C - "Any vent, overflow, or water level control gauge provided on tanks or other structures containing

		water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. Openings or vents shall face downward and shall be not less than 2 feet above the floor of a pump room, the roof or cover of a tank, the ground surface or the surface of other water supply structures."

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP003 - 2014 NEW SURFACE WATER TREATMENT PLANT	Treatment	<p>Chemical Storage tanks for Dadmac, TMB-1913 mixing tank, and TMB-930 mixing tank are not labeled for the specific chemical used.</p> <p>LAC 51:XII.319.D.23 - Storage tanks and pipelines for liquid chemicals shall be specified for use with individual chemicals and not used for different chemicals. Offloading areas must be clearly labeled to prevent accidental cross-contamination.</p>

**Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
PF001 - TOCA BOOSTER PUMP STATION	Pump/pumping facility and control	<p>The Toca Booster Station pumps are leaking water on the pump house floor. The leak is enough that the pump house floor is flooded.</p> <p>LAC.51:XII.215.A.4, "Both raw and finished water pumping stations shall: provide a suitable outlet for drainage without allowing discharge across the floor, including pumping</p>

		glands, vacuum air relief valves, etc."
FACILITY	CATEGORY	FINDINGS
GR001 - OLD GROUND AT PLANT 3.0 MG	Finished Water Storage	<p>The area around the small ground storage tank at the St. Bernard water plant is retaining water.</p> <p>LAC.51:XII.225.R, "The area surrounding a ground-level structure shall be graded in a manner that will prevent surface water from standing within 50 feet of it."</p>
FACILITY	CATEGORY	FINDINGS
EL002 - MERAUX 0.5 MG	Finished Water Storage	<p>The Meraux tower's overflow is laying on the ground and is not the proper distance from grade.</p> <p>LAC.51.225.I.1, "All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate. No overflow may be connected directly to a sewer or a storm drain. All overflow pipes shall be located so that any discharge is visible."</p>
FACILITY	CATEGORY	FINDINGS
GR003 - TOCA TANK 0.3 MG IN DIST	Finished Water Storage	<p>The overflow pipe for the Toca ground storage tank is buried with no outlet. The overflow pipe discharges into the ground.</p> <p>LAC.51:XII.225.I.1, "All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate. No overflow may be connected directly to a sewer or a storm drain. All overflow pipes shall be located so that any discharge is visible."</p>
FACILITY	CATEGORY	FINDINGS
TP004 - TOCA Booster Station	Treatment	<p>A flow meter to determine the water flow rate at the TOCA booster station is not provided.</p> <p>LAC.51:XII.203.B.3, "A means to measure the flow stream being dosed shall be provided in order to determine chemical feed rates."</p>
FACILITY	CATEGORY	FINDINGS
TP003 - 2014 NEW SURFACE WATER TREATMENT PLANT	Treatment	<p>The chemical feed rates at the St. Bernard water treatment plant and at the TOCA booster station are not fed proportional to flow and are being manually adjusted.</p> <p>LAC.51:XII.203.B.2, "Feeders may be manually or automatically controlled. 2. Chemical feed rates shall be proportional to the flow stream being dosed."</p>
FACILITY	CATEGORY	FINDINGS
TP004 - TOCA Booster Station	Treatment	<p>The LAS storage tank is not provided with a scale that gives meaningful results to determine the quantity of chemicals used.</p>

		LAC.51:XII.203.J.3, "A means shall be provided to readily measure the liquid level in the liquid storage tank."
FACILITY	CATEGORY	FINDINGS
TP003 - 2014 NEW SURFACE WATER TREATMENT PLANT	Treatment	<p>The St. Bernard anhydrous ammonia rotameter is routinely breaking and going out of service. The ammonia leaks from the rotameter and associated piping when the rotameter fails. On one occasion the plant's operators had to be evacuated while the ammonia odor dissipated. The cause of this disparity must be investigated and resolved. Additional protection measures should be in place to prevent the ammonia rotameter room from leaking ammonia.</p> <p>LAC.51:XII.209.E.3.b, "An emergency air exhaust system, as in 209.A.3 of this Part but with an elevated intake, shall be provided in the ammonia storage room."</p>
FACILITY	CATEGORY	FINDINGS
TP003 - 2014 NEW SURFACE WATER TREATMENT PLANT	Treatment	<p>The TMB930 storage tank does not have a means to accurately measure the amount of chemical used daily. The graduations on the side of the tank do not provide meaningful information for the day to day usage.</p> <p>LAC.51:XII.203.J.3, "A means shall be provided to readily measure the liquid level in the liquid storage tank."</p>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP004 - TOCA Booster Station	Treatment	<p>Not all of the TOCA booster station chlorine cylinders were restrained at time of inspection.</p> <p>LAC.51:XII.209.A.7.c, "Full and empty cylinders of</p>

		chlorine gas shall meet the following requirements: restrained in position;"
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP004 - TOCA Booster Station	Treatment	The in use chlorine cylinders at the TOCA booster station are not scaled.  LAC.51:XII.203.B.5.a, "Weighing scales: shall be provided for weighing cylinders at all plants utilizing chlorine gas;
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL006 - DELACROIX 0.1 MG	Finished Water Storage	Tower drainage at the Delacroix water tower should be discharging away from the tower base and not allow to accumulate under the tower.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL005 - YSCLOSKEY 0.1 MG	Finished Water Storage	Tower drainage at the Yscloskey water tower should be discharging away from the tower base and not allow to accumulate under the tower.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Intake	Intake	During the survey there was a discussion of adding a new raw water line to draw from the river. Please be advised that this new line would need prior approval from LDH before construction.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Treatment Plant and Booster Station	Management	Unused and empty chemical storage containers should be removed from the St. Bernard treatment plant and from the Toca booster station,
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Treatment Plant	Treatment	A pressure gauge in the CL2 injector room filter side is broken and in need of repair.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Transfer Pumps	Pumps	Upon inspection the transfer pump gland drain lines were clogged and need servicing.

ST CHARLES Parish

Dear Mr. Brou:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 23, 2018 sanitary survey inspection of the public water supply system for ST CHARLES WATER DISTRICT 1 EAST BANK (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## Parties Present

Name	Organization
David Boggs	LDH OPH – Region 3
Robert Brou	St Charles Water Dist # 1 & 2
Alicia Martinez	LDH Engineering District I

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water syste

### **Significant Deficiencies**

**No observations were recorded in this category.**

### **Deficiencies**

**No observations were recorded in this category.**

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The bolts on the raw water check valves are showing signs of corrosion.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Teche Region III  
Attn: David Boggs,  
1434 Tiger Drive  
Thibodaux, Louisiana 70301

The following compliance history is provided your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

**No Positive Samples were reported in the past year.**

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

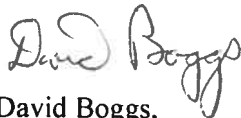

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 985-449-5007 ext. 345.

Respectfully,

David Boggs,  
Engineer Intern

ST LANDRY Parish

Dear Ms. Johnson:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 13, 2018 sanitary survey inspection of the public water supply system for TOWN of GRAND COTEAU WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Kyle Champagne	LDH Region IV Engineering
Mike Gamble	Town of Grand Coteau

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	The protective fencing surrounding Well #4 and its' treatment facility was compromised. There were 2 sections of the fence that have significant gaps that leave the water system facilities exposed. A continuous fence, capable of being locked, must be constructed to prevent trespassing, vandalism, and sabotage of the water system facilities.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water system was unable to provide the chemical analyses for the chosen method of treatment (Zinc Orthophosphate). All public water systems must use an approved chemical laboratory to perform all required chemical analyses using approved laboratory methodologies. Review the required instruction at <a href="http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf">http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf</a> and complete the required form located at <a href="http://ldh.la.gov/index.cfm/page/963">http://ldh.la.gov/index.cfm/page/963</a> under the heading Approved Laboratory Form (Instructions).
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was not available for review by the water system during the survey. The water system has not been enforcing the CCCP and there were no current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.
FACILITY	CATEGORY	FINDINGS
1097001-003 - WELL #3 - OAK BLVD IN THE	Source	The well has an existing cracked slab. The well shall be provided with a watertight cover constructed of concrete at least 4 inches thick and 2.5 feet in all

PARK		directions. The cover must be graded to drain away from casing. Repair or replace the cracked concrete slab to prevent any potential contamination into the well.
------	--	---

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological test and chemical test results reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, the test results were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website at the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED2	Finished Water Storage	From review, the finished water storage facilities should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
TP002 - WELL #3	Treatment	The light is currently not operational, either the bulb is

TREATMENT		burned or there is an electrical issue. The chlorine room must be equipped with a working light.
FACILITY	CATEGORY	FINDINGS
TP004 - WELL #4 - TREATMENT	Treatment	The water system currently uses Zinc Orthophosphate (TMB-439) as an inhibitor for corrosion control. All public water systems that use orthophosphates for treatment must have test equipment capable of monitoring and measuring total phosphate. The total phosphate applied shall not exceed 10 mg/L measured as PO <sub>4</sub> . Obtain adequate testing equipment and begin monitoring the dosage to insure that the total phosphate does not exceed this limit.
FACILITY	CATEGORY	FINDINGS
1097001-003 - WELL #3 - OAK BLVD IN THE PARK	Source	Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. The pressure gauge is currently installed downstream of the check valve. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP002 - WELL #3 TREATMENT	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	On 05/08/2018, LDH was informed that there was a leak at the water plant. During a site visit performed on 05/11/2018, it was observed that one of the service pumps has a severe leak coming from the packing. During the investigation, it was mentioned to LDH staff that the water system had previously received an estimate to repair the leak. The packing for the service pump needs to be repaired or replaced to prevent any further leakage from occurring.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 30 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH/OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 30 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

Management	System Management and Operation	An approved chemical lab status certification has not been obtained from LDH for analyzing the physical and chemical analytes currently being monitored by the water system. All public water systems must use an approved chemical laboratory to perform all required chemical analyses using approved laboratory methodologies. Review the required instruction at <a href="http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf">http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf</a> and complete the required form located at <a href="http://ldh.la.gov/index.cfm/page/963">http://ldh.la.gov/index.cfm/page/963</a> under the heading "Approved Laboratory Form (Instructions)".

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ARNAUDVILLE ELEVATED TOWER	Finished Water Storage	From review, the elevated tower should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the elevated tower's interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the tower could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
EL004 - PORT BARRE ELEVATED TOWER	Finished Water Storage	From review, the elevated tower should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the elevated tower's interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the tower could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
EL002 - LEONVILLE ELEVATED TOWER	Finished Water Storage	From review, the elevated tower should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the elevated tower's interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the tower could benefit from an inspection.

FACILITY	CATEGORY	FINDINGS
EL003 - OPELOUSAS ELEVATED TOWER	Finished Water Storage	From review, the elevated tower should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the elevated tower's interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the tower could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
EL001 - ARNAUDVILLE ELEVATED TOWER	Finished Water Storage	The area around the elevated tower standpipe has eroded. This area must be restored and graded to facilitate the rapid removal of water within a 50' radius of the storage tank. Ponding water could potentially compromise the integrity of the structure.
FACILITY	CATEGORY	FINDINGS
EL002 - LEONVILLE ELEVATED TOWER	Finished Water Storage	The elevated tower is not equipped with a working pressure gauge or another way to monitor the water level in the tower. A pressure gauge or another way of monitoring the water level in this structure must be installed.
FACILITY	CATEGORY	FINDINGS
EL001 - ARNAUDVILLE ELEVATED TOWER	Finished Water Storage	The elevated tower is not equipped with a working pressure gauge or another way to monitor the water level in the tower. A pressure gauge or another way of monitoring the water level in this structure must be installed.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT- WELLS #2, #4, #6	Treatment	The chlorine gas room for Well #2 and Well #4 currently does not have an air intake louver. The chlorine gas room must be constructed with an air intake located near the ceiling. Install a screened air intake louver or openings near the ceiling to properly ventilate the chlorine gas room. Air movement should be through screened louvers or openings near the ceiling. Every square foot of space requires at least 1 square inch of effective opening for proper ventilation.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT- WELLS #2, #4, #6	Treatment	There is no secondary containment provided for the chemical being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment with a sufficient containment volume for the phosphate storage tanks feeding into Well #2 and Well #4.
FACILITY	CATEGORY	FINDINGS
1097005-002 - WELL #2 - TWR YRD NEAREST TO CRESWELL LN	Source	The well discharge piping is not equipped with a flow measuring device. A means for measuring flow must be provided to detect any changes in operating conditions. Install a device (or monitoring methods) to measure flow from the well.

1097005-004 - WELL #4 -TWR YRD FURTHEST CRESWELL LN	Source	The well appears to be equipped with a malfunctioning check valve. The well must be equipped with a working check valve.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
LEWISBURG BELLEVUE Public Water System  
PWS ID LA1097006  
ST LANDRY Parish

Dear Mr. Vidrine:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 19, 2018 sanitary survey inspection of the public water supply system for LEWISBURG BELLEVUE WATER SYSTEM. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Ebenezer Omojola	LDH OPH Region IV Engineering
Allyson Stelly	Lewisburg Bellevue Water System

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**NOTICE OF VIOLATIONS**

Dear Mayor Mayes:

During the RWIC IRT meeting that took place on Wednesday, October 17, 2018, LDH was informed that there are numerous leaks in the distribution system and it is of major concern to the water system. The town is continually repairing the leaks as time and budget permits. It was stated that as the town fixes a leak, it causes other leaks to spring up in another location. The town's personnel stated that they are actively maintain a list of locations where water main repairs are needed. It was also noted that there is a known major leak located at the intersection of McNeil Street and Melville Street that has compromised fire protection measures and accounts for negative impacts on the distribution system's pressure. The leak is associated with the roots from a customer's pine tree that have penetrated a water main in the area.

**NOTICE OF VIOLATIONS**

**NOTICE OF VIOLATIONS**

*(IN ACCORDANCE WITH LOUISIANA ADMINISTRATIVE CODE, TITLE 51, PART XII)*

1. **§233.A.** All potable water distribution systems shall be designed, constructed, and maintained so as to prevent leakage of water due to defective materials, improper jointing, corrosion, settling, impacts, freezing, or other causes.

**REQUIRED CORRECTIVE ACTIONS:**

1. Immediate action needs to be taken by the public water system to repair the leaks within the distribution system to eliminate possible contamination and insure safe drinking water is being provided to the customers. Repairing the leaks will reduce the excessive water loss and decrease the cost of chlorine being used for disinfection as reported on by the water system.

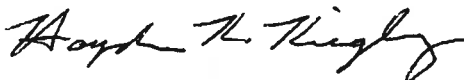

**WRITTEN RESPONSE REQUIRED**

The above violations must be corrected within 90 days upon receipt of this Notice of Violations letter in order to return to compliance. Inform this office, in writing, when all the violations are completely addressed. The response must summarize what actions you have taken to correct these items and include all required documentation to support those actions. If additional time is required to correct the violations, then the written response must also contain a request with specific dates when the violations will be corrected. If you need additional information, feel free to contact LDH Engineering Services at (337) 262-5634. Your cooperation and prompt response is greatly appreciated. Written responses can be mailed to the following address:

		mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website at the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system representative was not able to retrieve records or provide evidence of sufficient maintenance or breadth of record keeping. An approved drinking water system must ensure that records and reports are satisfactorily maintained and retrievable. Copies of records and reports for any drinking water system shall be filed in folders identifying the public water system by name as well as public water system identification number (PWS ID #) and shall be made available for review upon request by the state health officer. It is strongly recommended that the water system begin filing documentation (e.g. lab reports, correspondences, etc.) separately and in chronological order for the following categories: Daily Operating Reports, LDH-Approved Chlorine Residual Reports, Bacteriological Sampling Results, Chemical Sampling Results, Cross Connection Control Policy /Backflow Prevention Test Reports, Miscellaneous. Feel free to contact this office at (337) 262-5746 to discuss fulfilling these requirements.
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED #2	Finished Water Storage	From review, the finished water storage facility (elevated tower) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED #2	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with a four mesh non-corrodible screen and installed to provide protection at all times.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

Office of Public Health • Acadian Region IV

825 Kaliste Saloom Rd • Brandywine 3 • Ste. 100 • Lafayette, Louisiana 70508  
Phone #: 337-262-5311 • Fax #: 337-262-5638 • [www.ldh.la.gov](http://www.ldh.la.gov)

"An Equal Opportunity Employer"

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP004 - WELLS #1, #2, #4, #5 - POST TREATMENT	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. As discussed during the survey, the tap will be placed outside of the fenced area for the elevated tower, on the horizontal section of distribution pipe running along Deprimo Lane. The pipe leading to the distribution system on the south side will be exposed and a smooth nosed sample tap will be placed. This task must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Ebenezer Omojola,  
825 Kaliste Saloom Road  
Brandywine 3, Suite 100  
Lafayette, LA 70508

The following compliance history is provided for your information

#### **Bacteriological Sampling History**

##### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

Office of Public Health • Acadian Region IV

825 Kaliste Saloom Rd • Brandywine 3 • Ste. 100 • Lafayette, Louisiana 70508

Re: Class I Sanitary Survey  
TOWN of PORT BARRE WATER SYSTEM Public Water System  
PWS ID LA1097013  
ST LANDRY Parish

Dear Mr. Savoy:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the February 15, 2018 sanitary survey inspection of the public water supply system for TOWN of PORT BARRE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system's total coliform monitoring plan is outdated and has been returned for updating. The current MRT does not represent the Maximum Residence Time and needs to be made inactive and a new MRT needs to be placed at the end of Quebedeaux Rd. This item can be accomplished by logging into the Monitoring Plan Portal at <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a> . OPH Region 4 engineering staff can be reached by phone @ 337-262-5316 to discuss the review and approval of the monitoring plan.
FACILITY	CATEGORY	FINDINGS
Management	Other	The piping in the treatment plant is severely corroded. The piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
Management	Other	Well #4 had a leak on the pump priming line. All potable water systems shall be designed, constructed and maintained so as to prevent leakage of water due to defective materials, improper jointing, corrosion, settling, impacts, freezing, or other causes. The leak must be repaired.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been enforcing the CCCP. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water system's working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers. It is to be noted that a TT45 violation is already been issued to the water system for this previously existing deficiency and needs to be addressed.
FACILITY	CATEGORY	FINDINGS
1097013-001 - WELL #4	Source	The well's casing vent is not covered by a 24 mesh corrosion resistant screen. The wells casing vent must be covered by a 24 mesh corrosion resistant screen.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	From review the finished water storage facility (elevated tower) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facility could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	The level gauge for the ground storage tank is broken. The level gauge shall be repaired and brought back to working order, unless the water system implements another way of monitoring the water level in this structure.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	The overflow for the elevated storage tank does not discharge over a splash plate or drainage inlet structure. The discharge must discharge over a splash plate or drainage inlet structure to prevent erosion around the foundation of the tower that could comprise the structural integrity of the tower.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	The overflow for the ground storage tank does not discharge over a splash plate or drainage inlet structure. The discharge must discharge over a splash plate or drainage inlet structure to prevent erosion around the foundation of the tank that could comprise the structural integrity of the tower.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with 24 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The brine and salt storage tanks are not properly labeled. The brine and salt storage tanks must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the salt and brine storage tanks.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The light is currently not operational, either the bulb is burned or there is an electrical issue. The chlorine room must be equipped with a working light.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT	Treatment	The overflow on the salt storage tank does not have a screen. A 24-mesh screen corrosion resistant screen must

PLANT		be installed to prevent contamination of the product.
FACILITY	CATEGORY	FINDINGS
1097013-002 - WELL #5	Source	Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. The pressure gauge is currently installed downstream of the check valve. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1097013-001 - WELL #4	Source	Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. The pressure gauge is currently installed downstream of the check valve. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1097013-003 - WELL #6	Source	Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. The pressure gauge is currently installed downstream of the check valve. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1097013-003 - WELL #6	Source	The air relief valve is leaking. The air relief valve needs to be repaired or replaced to eliminate the potential for contamination from the questionable quality water being retained in the air relief valve after start up.
FACILITY	CATEGORY	FINDINGS
1097013-003 - WELL #6	Source	The screening on the air release-vacuum relief valve is broken. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screen to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1097013-002 - WELL #5	Source	The screening on the air release-vacuum relief valve is broken. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screen to prevent the entrance of contaminants.

Notes:

The turbine pumps for wells #4, #5, and #6 are lubricated with grease. Ten States Standards, 2003 Ed. 3.2.7.1.c. Lubricants must meet ANSI/NSF 61 or be approved by the reviewing authority. During the sanitary survey, the tube of grease that is used to lubricate the pumps could not be provided. Provide documentation that the grease being used to lubricate the pumps meets the required standards.

The screening on the air release-vacuum relief valve is broken on both of the softeners. The air release-vacuum relief valves must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screens to prevent the entrance of contaminants.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Kyle Champagne,  
825 Kaliste Saloom Road

Re: Level 2 Assessment triggered on September 14, 2018  
PRAIRIE RONDE WATER SYSTEM INC Public Water System  
PWS ID LA1097014  
ST LANDRY Parish

Dear Responsible Party:

The Louisiana Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the September 17, 2018 RTCR Level 2 Assessment of the public water supply system for PRAIRIE RONDE WATER SYSTEM INC Public Water System. The intent of this assessment, in response to a Tier 1 (ACUTE) Bacteriological MCL violation, is to locate sanitary defects the could infer with the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code.

### Parties Present

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Gerald Cortez	Prairie Ronde Water System Inc
Hayden K. Keigley	OPH-Region IV Engineering

The RTCR Level 2 Assessment form is enclosed with this letter. Please review the findings of the assessment report. The sanitary defects listed in the table, starting on page 5 of the RTCR Level 2 Assessment Form titled "Issue Descriptions and Corrective Actions" must be corrected and a written response submitted to the department within 30 days of the RTCR Level 2 Assessment triggered on September 14, 2018. The response is due on or before October 14, 2018. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these sanitary defects, then the written response must also contain a request with specific dates when the sanitary defects will be corrected.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following defects observed during our inspection of your system's facilities and records. Under the RTCR, significant defects are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deflects**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system's revised total coliform monitoring plan needs to be updated. The plan has been returned for updating. TCR-008, 118 WPA Road is in an undesirable location. This site has been inactivated and must not be used in future compliance monitoring. The location provides for interference that makes it hard to ascertain water quality. Possible options for site replacement include the upstream or downstream locations, where smooth nosed taps are currently available. Changing the monitoring can be accomplished by logging into the Monitoring Plan Portal at <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a> . OPH Region 4 Engineering staff can be reached by phone at 337-262-5746 or 337-262-5634 for assistance and to discuss the review and approval of the monitoring plan.
FACILITY	CATEGORY	FINDINGS
Management	Other	There are well sites equipped with PVC caps with perforations instead of 24 mesh corrosion resistance screen for the casing vent and/or the air relief vent. There are several caps where organic build up is visible. The PVC caps on the casing vent and/or the air relief valves for all well sites must be replaced with 24 mesh corrosion resistance screen.
FACILITY	CATEGORY	FINDINGS
Management	Other	There is a leak (covered by the black plastic meter) where the injection line meets the water main from Well #4. The leak needs to be repair to prevent potential contamination.
FACILITY	CATEGORY	FINDINGS
1097014-002 - WELL #2 - WATER TOWER RD, EAST	Source	The air release-vacuum relief valve is not equipped with relief piping in the proper orientation. The air release-vacuum relief valve must be equipped with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1097014-004 - WELL #4 - HWY 104, SOUTH	Source	The area around the well is excessively wet and currently graded to allow ponding of water near the well slab. The area around the well must be well-drained and facilitate the rapid removal of water within a 50 foot radius of the well. The ponding water presents a potential source of contamination.

FACILITY	CATEGORY	FINDINGS
1097014-002 - WELL #2 - WATER TOWER RD, EAST	Source	The area around the well is excessively wet. The area around the well must be well-drained and facilitate the rapid removal of water within a 50 foot radius of the well. The ponding water presents a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
1097014-003 - WELL #3 - WATER TOWER RD, NORTH	Source	The area around the well is wet due to excessive discharge from the well. The ponding water presents a potential source of contamination. The discharge from the well needs to be addressed. Grading of the site must be reviewed after addressing the prelude discharge line.
FACILITY	CATEGORY	FINDINGS
1097014-003 - WELL #3 - WATER TOWER RD, NORTH	Source	The well's outer casing is showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing to prevent a source of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### Written Response Required

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

<b>Which well sources were not used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Was a new source activated?		X		
2. Is the ground graded to prevent surface water flow towards the well?		X		
3. Does the well casing extend at least 18" above the ground?	X			
4. Is the exposed portion of the well casing in good condition?		X		
5. Does the well have a secured sanitary seal well cap?	X			
6. Is the sanitary seal well cap vented and screened?	X			
7. Is there a down turned well vent that is at least 24 inches above the ground surface?	X			
8. Are appropriate backflow prevention devices installed, maintained and tested on all cross connections?	X			
9. Does raw water quality data indicate changes to the source water quality?		X		
10. Has source yield changed?		X		
11. Are there obvious sources of contamination in the vicinity of the well?		X		
12. Was the well pump recently repaired or replaced?		X		
13. Are there signs of vandalism at the well?		X		
14. Have there been any unusual weather events that may have impacted the well?		X		
15. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the well?		X		
16. Are there any issues with well appurtenances?	X			

**Assessor Name: Steven R. Joubert, P.E.**

**B. Source – Surface Water**

*\*If PWS does not use a surface water source check here and skip to subsection C ☒*

<b>Which surface water sources were used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Is the surface water intake screened and maintained?				
2. Is the pump house protected from unauthorized personnel?				
3. Does raw water quality data indicate changes to the source water quality?				
4. Are there obvious sources of contamination within the nearby watershed?				
5. Are there signs of vandalism at the surface water intake?				
6. Have severe weather events such as heavy rainfall, rapid snowmelt, drought, or reservoir turnover occurred?				
7. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the source?

Questions:	YES	NO	N/A	Unk.
1. Have there been interruptions in any treatment processes?		X		
2. Has the treatment plant(s) or finished water pump(s) experienced any power interruptions?		X		
3. Has there been any recent installation or repair of treatment equipment?		X		
4. Have there been changes to any treatment processes?		X		
5. Does water quality data indicate inadequate/inappropriate treatment of water?		X		
6. Are all treatment processes operational and maintained?	X			
7. Is there an air gap between treatment instrumentation and waste lines?		X		
8. Were there any failures to meet required CT values?			X	
9. Did treatment plant flow rates exceed the permitted capacity?		X		
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?			X	
11. Did a review of the turbidity data reveal any anomalies?			X	
12. Did a review of chlorine residual data reveal any anomalies or deficiencies?		X		

**Assessor Name: Steven R. Joubert, P.E.**

**D. Distribution System**

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?		X		
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?			X	
3. If samples were collected from inside a building, does the site have additional water treatment installed?			X	
4. Is there evidence that the system experienced low or negative pressure?		X		
5. Was there any scheduled flushing of the distribution system?		X		
6. Are pump stations protected from unauthorized personnel?	X			
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?	X			
8. Are air relief valves maintained and operational without leaks?	X			
9. Are pump stations maintained and equipment operational?	X			
10. Are fire hydrants and blow offs maintained and operational without leaks?	X			
11. Does water quality data collected in the distribution system show results indicative of an issue?	X			
12. Have any water related customer complaints been received?		X		
13. Is there any evidence of intentional contamination in the distribution system?				
14. Are there any known leaks?	X

**E. Storage Tanks**

*\*If no storage tank check here and skip to section IV. ☐*

Questions:	YES	NO	N/A	Unk.
1. Is the pressure tank maintaining an appropriate minimum pressure?			X	
2. Are all vents and overflow pipes screened?	X			
3. Is the tank maintained and free of rust, holes and leaks?	X			
4. Are there any unsealed openings in the storage facility such as access doors, vents or joints?		X		
5. Are signs of vandalism visible?		X		
6. Are roof hatches and manhole openings tightly covered and locked?	X			
7. Do downspouts and overflow pipes drain water away from structure?	X			
8. Have all storage tanks been inspected and cleaned within the last 5 years?				X

**Assessor Name: Steven R. Joubert, P.E.**

**IV. Water Quality Data Table**

Parameter	Number of Each Sample Type Collected		
	Raw	Entry Point	Distribution
Chlorine Residual (mg/L)		POE-001 – 0.85 ppm	TCR-008, 1.42 ppm TCR-009, 1.51 ppm
Turbidity (NTU)			
Coliform Bacteria			
Other (specify below)			

**V. Issue Descriptions and Corrective Actions (Use page 8 to report additional issues)**

*\* No issues were found during the assessment:* ☐

Issue Description (A.2.)	Corrective Action
<p>The area around the well is excessively wet. The area around the well must be well-drained and facilitate the rapid removal of water within a 50 foot radius of the well. The ponding water presents a potential source of contamination.</p> <p>(Well #2, #3, &amp; #4)</p>	

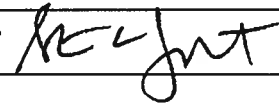

Issue Description (A.4.)	Corrective Action
<p>The well's outer casing is showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing to prevent a source of potential contamination.</p> <p>(Well #3)</p>	

Issue Description (A.16.)	Corrective Action
<p>The air release-vacuum relief valve is not equipped with relief piping in the proper orientation. The air release-vacuum relief valve must be equipped with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen.</p> <p>(Well #2)</p>	

**Louisiana Department of Health, Office of Public Health**  
**Engineering Services – Safe Drinking Water Program**  
**RTCR Level 2 Assessment Form**

Rev. 3/2017

Issue Description (A.16. cont)	Corrective Action
There are well sites equipped with PVC caps with perforations instead of 24 mesh corrosion resistance screen for the casing vent and/or the air relief vent. There are several caps where organic build up is visible. The PVC caps on the casing vent and/or the air relief valves for all well sites must be replaced with 24 mesh corrosion resistance screen.	
Assessor Name and Signature: Steven R. Joubert, P.E. 	

(Additional Issue Continued on Page 8)

**VI. Water System Certification**

I certify under penalty of law that I am the person authorized to fill out this form, and the information contained herein is true, accurate and complete to the best of my knowledge and belief.

**Name (print):**

**Title:**

**Name Signature:**

**Date:**

**Phone and Email:**

**Note** - This form must be completed and submitted within 30 days of the date that the public water system triggered the Level 2 Assessment.

<b>Issue Description (D.14)</b>	<b>Corrective Action</b>
There is a leak (covered by the black plastic meter) where the injection line meets the water main from Well #4. The leak needs to be repair to prevent potential contamination.	
<b>Issue Description (list section letter and #)</b>	<b>Corrective Action</b>
The water system's revised total coliform monitoring plan needs to be updated. The plan has been returned for updating. TCR-008, 118 WPA Road is in an undesirable location. This site has been inactivated and must not be used in future compliance monitoring. The location provides for interference that makes it hard to ascertain water quality. Possible options for site replacement include the upstream or downstream locations, where smooth nosed taps are currently available. Changing the monitoring can be accomplished by logging into the Monitoring Plan Portal at <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a> . OPH Region 4 Engineering staff can be reached by phone at 337-262-5746 or 337-262-5634 for assistance and to discuss the review and approval of the monitoring plan.

February 23, 2018

Joseph Pitre  
Town of Washington Water System  
P.O. Box 218  
Washington, LA 70589

Re: Class I Sanitary Survey  
Town of Washington Water System  
PWS ID #: LA 1097016  
St. Landry Parish

Dear Mayor Pitre:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the February 15, 2018 sanitary survey inspection of the public water supply system for Town of Washington Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Hayden K. Keigley	LDH Region IV Engineering
Kyle J. Champagne	LDH Region IV Engineering
Milton Joubert	Town of Washington
Annette Rosette	Town of Washington

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	Other	During the survey, there were two (2) leaks detected within the distribution system. There is severe leakage in the distribution system piping located at the corner of North Washington Street and East Moundville Street. The fire hydrant located at the intersection East Hill Street and South Bridge Street also has a leak. Water systems that provide potable water to its customers must prevent any leakage within the distribution system by keeping it properly maintained at all times. It is imperative that these leaks be repaired immediately with minimum interruption of service to the customers.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 Distribution System	Distribution System	The water system has adopted an ordinance for a Cross Connection Control Program (CCCP). The water system has not been monitoring or strictly enforcing the CCCP. During the sanitary survey, there was no customer list available for review by LDH and there were only three (3) current annual test reports for backflow prevention devices on file with the water system. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water system's working CCCP. All correspondence including the annual test reports of backflow prevention devices must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that the water system will take to enforce the CCCP as a requirement, an up-to-date list of critical customers and all current annual test reports for customers that require backflow prevention devices.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1097016-003 Well #5 (Cedar Hill Drive & Vine Street)	Source	The well's outer casing and steel base plate used to support the pump are showing signs heavy rusting, corrosion and pitting. The well's casing and pump support base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's casing and steel base plate to prevent sources of potential contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1097016-004 Well #6 (East Hill & South Washington)	Source	The well's outer casing and steel base plate used to support the pump are showing signs heavy rusting, corrosion and pitting. The well's casing and pump support base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's casing and steel base plate to prevent sources of potential contamination.

**Minor Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily. An additional chlorine residual check must be made monthly at the ACR site. These points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Please start measuring and recording the residuals at the locations described using a digital chlorine analyzer. Residuals must also be recorded on signed and dated "LDH Approved Chlorine Residual Forms", which can be found at: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP002 Treatment Plant #2 (Well #5)	Treatment	During the sanitary survey, it was noted that the drain for the secondary containment basin was open. Secondary containment must be provided for all liquid storage tanks containing chemicals used for water treatment. Provide a means for keeping the drain closed at all times to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP002 Treatment Plant #2 (Well #5)	Treatment	The chlorine gas room currently does not have an air intake louver. The chlorine gas room must be constructed with an air intake located near the ceiling. Install a screened air intake louver or openings near the ceiling to properly ventilate the chlorine gas room.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant #1 (Well #6)	Treatment	The light is currently not operational in the chlorine feed room. Either the bulb has burned or there is an electrical issue. The chlorine feed room must be equipped with a working light.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP002 Treatment Plant #2 (Well #5)	Treatment	The lights are currently not operational in both the chlorine gas feed and storage rooms. Either the bulbs have burned or there is an electrical issue. The chlorine gas feed and storage rooms must be equipped with a working light.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1097016-003 Well #5 (Cedar Hill Drive & Vine Street)	Source	The exhaust/relief piping for the air release-vacuum relief valve is not screened. The relief piping must be covered with a 24 mesh corrosion resistant screen. Provide a screen on the relief piping to protect against potential entrance of contaminants.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1097016-004 Well #6 (East Hill &	Source	The screen for the exhaust/relief piping for the air release-vacuum relief valve is damaged. The relief piping must be covered with a 24 mesh corrosion resistant screen. Repair the

South Washington)		screen on the relief piping to protect against potential entrance of contaminants.
-------------------	--	--

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP002 Treatment Plant #2 (Well #5)	Treatment	The chlorine gas cylinders being stored in the chlorine feed room are not properly secured. Full and empty cylinders of chlorine gas must be restrained in position at all times to prevent upset. Properly secure all chlorine gas cylinders.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

SAVOY SWORDS WATER SYSTEM INC  
5488 Hwy 190  
Eunice, LA 70535

Re: Class I Sanitary Survey  
SAVOY SWORDS WATER SYSTEM INC Public Water System  
PWS ID LA1097024  
ST LANDRY Parish

Dear Mr. Soileau:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 19, 2018 sanitary survey inspection of the public water supply system for SAVOY SWORDS WATER SYSTEM INC (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Kyle Champagne	LDH Region IV Engineering
Brian Soileau	Savoy Swords Water System

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water system was unable to provide the chemical analyses for the chosen method of treatment (Potassium Permanganate, Softening and Filtration). All public water systems must use an approved chemical laboratory to perform all required chemical analyses using approved laboratory methodologies. Review the required instruction at <a href="http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf">http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf</a> and complete the required form located at <a href="http://ldh.la.gov/index.cfm/page/963">http://ldh.la.gov/index.cfm/page/963</a> under the heading Approved Laboratory Form (Instructions).
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	All commercial customers should be assessed for proper backflow prevention devices. The water system should have a procedure for addressing existing customers that do not currently have the required protection device. Please confirm the type of device and testing of device at Cajun Campground and the Acadiana Baptist Center. Please feel free to call this office to discuss the required protection for any customer on the water system.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There is a hose bib in the pumping facility at the Well Site facility that does not have an atmospheric vacuum breaker installed. Install an atmospheric vacuum breaker on the hose bib.
FACILITY	CATEGORY	FINDINGS
1097024-004 - WELL #4	Source	The area around the well is excessively wet. The area around the well must be well-drained and facilitate the rapid removal of water within a 50' radius of the well. The ponding water presents a potential source of contamination.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	The existing screen for the elevated towers overflow pipe is damaged. The overflow piping must be screened with a four mesh, non-corrodible screen. Replace the damaged screen with a new four mesh, non-corrodible screen to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
GR001 - SWORDS GROUND STORAGE TANK	Finished Water Storage	The finished water storage facility is not equipped with an approved sample tap. The finished water storage facility must be equipped with a smooth-nosed

		sampling tap. Install an approved tap on the tank in a downturned direction to facilitate the collection of water samples for bacteriological and chemical analyses, when needed.
FACILITY	CATEGORY	FINDINGS
GR003 - PERCHVILLE GROUND STORAGE TANK	Finished Water Storage	The finished water storage facility is not equipped with an approved sample tap. The finished water storage facility must be equipped with a smooth-nosed sampling tap. Install an approved tap on the tank in a downturned direction to facilitate the collection of water samples for bacteriological and chemical analyses, when needed.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	The finished water storage facility is not equipped with an approved sample tap. The finished water storage facility must be equipped with a smooth-nosed sampling tap. Install an approved tap on the tank in a downturned direction to facilitate the collection of water samples for bacteriological and chemical analyses, when needed.
FACILITY	CATEGORY	FINDINGS
GR004 - WELL SITE GROUND STORAGE TANK	Finished Water Storage	The finished water storage facility is not equipped with an approved sample tap. The finished water storage facility must be equipped with a smooth-nosed sampling tap. Install an approved tap on the tank in a downturned direction to facilitate the collection of water samples for bacteriological and chemical analyses, when needed.
FACILITY	CATEGORY	FINDINGS
HD003 - PERCHVILLE PRESSURE TANK	Finished Water Storage	The finished water storage facility is not equipped with an approved sample tap. The finished water storage facility must be equipped with a smooth-nosed sampling tap. Install an approved tap on the tank in a downturned direction to facilitate the collection of water samples for bacteriological and chemical analyses, when needed.
FACILITY	CATEGORY	FINDINGS
TP004 - RICHARD SITE TREATMENT	Treatment	The brine tank is not properly labeled. The brine must be labeled with the name of the chemical being injected for treatment. Provide a label for the brine tank.
FACILITY	CATEGORY	FINDINGS
TP005 - PERCHVILLE BOOSTER SITE TREATMENT	Treatment	The ventilating fan is currently not operational. Either the fan is broken or there is an electrical issue. The chlorine room must be equipped with a working ventilating fan.
FACILITY	CATEGORY	FINDINGS
TP005 - PERCHVILLE BOOSTER SITE TREATMENT	Treatment	The water system has only one chlorine gas cylinder installed. Systems that require chlorination to protect the water supply must have secondary gas cylinder installed. Install a second chlorine gas cylinder to

		provide for continuous chlorine injection and continuous disinfection.
FACILITY	CATEGORY	FINDINGS
TP004 - RICHARD SITE TREATMENT	Treatment	There is no secondary containment provided for the potassium permanganate being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment for the potassium permanganate storage tank with a sufficient containment volume.
FACILITY	CATEGORY	FINDINGS
1097024-005 - WELL #5 - MIDDLE WELL	Source	The screening on the air release-vacuum relief valve is broken. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screen to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1097024-005 - WELL #5 - MIDDLE WELL	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP004 - RICHARD SITE TREATMENT	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.
FACILITY	CATEGORY	FINDINGS
TP005 - PERCHVILLE BOOSTER SITE TREATMENT	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.
FACILITY	CATEGORY	FINDINGS
TP003 - SWORDS BOOSTER SITE TREATMENT	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL SITE TREATMENT PLANT	Treatment	The chlorine feed room is not equipped with an inspection window. A shatter resistant inspection window is required where chlorine gas is fed.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL SITE TREATMENT PLANT	Treatment	The empty chlorine gas containers are not properly protected from direct sunlight. Full and empty chlorine gas containers must be properly protect from direct sunlight.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
 Attn: Kyle Champagne,

PWS ID #: LA 1097032  
St. Landry Parish

Dear Mr. Johnson:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the February 15, 2018 sanitary survey inspection of the public water supply system for Greenbriar Prairie Basse Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 Distribution System	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) has been adopted by the water system. It has been previously stated that there were no customers in the distribution system that required backflow prevention devices. However, there were no current files for review during the sanitary survey. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence must be kept on file by the water system for review during sanitary surveys and inspections performed by LDH. Please provide an up-to-date written statement regarding the current status of backflow prevention that may be required by the water system from its customers.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1097032-001 Well #1 (North Well)	Source	The existing concrete slab cover for the well has a crack. The well must be provided with a watertight cover constructed of concrete. Repair the cracked concrete slab to prevent any potential contamination into the well.

**Minor Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily. An additional chlorine residual check must be made monthly at the ACR site. These points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring and recording the residuals at the locations described using a digital chlorine analyzer. Residuals must also be recorded on signed and dated "LDH Approved Chlorine Residual Forms", which can be found at: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
HD001 Hydropneumatic Tank	Finished Water Storage	The hydropneumatic tank is not equipped with a pressure gauge. A pressure gauge must be provided as an integral part of the tank's control equipment.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR001 Ground Storage Tank	Finished Water Storage	The overflow piping for the ground storage tank terminates too close to the natural ground surface. A splash plate must be provided for the overflow piping to prevent erosion of the

		foundation. The discharge outlet must be installed at an elevation between 12 and 24 above a splash plate. Install a splash plate to receive the discharge from the outlet and modify the existing overflow piping to maintain an adequate elevation above the splash plate.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR001 Ground Storage Tank	Finished Water Storage	The screen for the ground storage overflow pipe is damaged. The overflow pipe must be screened with a twenty-four mesh, non-corrodible screen. Replace the damaged screen to provide sanitary protection at all times.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	The water system has only one (1) chemical feed pump for chlorine injection installed in the service pump room. Systems that require a chemical feed to protect the water supply must have a sufficiently sized replacement pump on standby. Provide documentation stating that a replacement chemical feed pump has been provided onsite for chlorine disinfection.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	The chlorine gas cylinders being stored in the chlorine room are not properly secured. Full and empty cylinders of chlorine gas must be restrained in position at all times to prevent upset. Properly secure all chlorine gas cylinders.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1097032-001 Well #1 (North Well)	Source	The exhaust/relief piping for the air release-vacuum relief valve is not properly screened. The relief piping must be covered with a 24 mesh corrosion resistant screen. Replace the current screening on the relief piping with a 24 mesh, non-corrodible screen to protect against potential entrance of contaminants.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Hayden K. Keigley, P.E.  
825 Kaliste Saloom Road  
Brandywine 3, Suite 100  
Lafayette, LA 70508

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at (337) 262-5634.

Respectfully,

Re: Class I Sanitary Survey  
Walmart Distribution Center Water System  
PWS ID #: LA 2097051  
St. Landry Parish

Dear Mayor Tatum:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 12, 2018 sanitary survey inspection of the public water supply system for Walmart Distribution Center Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Hayden K. Keigley	LDH/OPH Region 4 Engineering
Steve Labrie	Walmart Distribution Center Water System
Calvin J. Tyler	Walmart Distribution Center Water System

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

No unresolved observations were recorded in this category.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The current Monitoring Plan for the water system needs to be updated. All public water systems must have a monitoring plan that includes all required routine compliance samples to be collected for the monitoring period. Every sampling site must have the correct address and a brief description of the physical location of the sample tap. Update and resubmit the Monitoring Plan for LDH review and approval. The Monitoring Plan Portal for the public water system can be found on LDHs website using the following link: <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a>
FACILITY	CATEGORY	FINDINGS
DS0950 Distribution System	Distribution System	Testing reports for the cross connection control devices could not be confirmed. All cross connection control devices must be tested annually by a certified tester.
FACILITY	CATEGORY	FINDINGS
1097010-011 Well #2 West Well (Emergency)	Source	The well is equipped with a sampling tap. An approved sample tap must be located upstream of the well discharge line check valve and must terminate in a downward direction. The existing tap orientation must terminate in a downward direction.

**Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	During the survey, it was apparent that the methods being used by the water system to check daily chlorine residuals were being performed incorrectly. Personnel should be trained on how to correctly use the equipment that is being used to sample for chlorine residuals.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
HD001 Hydropneumatic Tank	Finished Water Storage	The finished hydropneumatic tank is not equipped with an approved sample tap. The finished water storage facility must be equipped with a smooth-nosed sampling tap. Install an approved tap on the hydropneumatic tank in a downturned direction to facilitate the collection of water samples for bacteriological and chemical analyses, when needed.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR001 Ground Storage Tank	Finished Water Storage	The overflow piping for the ground storage tank terminates too close to the natural ground surface. A splash plate must be provided for the overflow piping to prevent erosion of the foundation. The discharge outlet must be installed at an elevation between 12 and 24 inches above a splash plate. Install a splash plate to receive the discharge from the outlet and modify the existing overflow piping to maintain an adequate elevation above the splash plate.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR001 Ground Storage Tank	Finished Water Storage	The screen for the ground storage tank overflow pipe is not adequate. The overflow pipe for the ground storage tank must be screened with twenty-four mesh, non-corrodible screen. Install a twenty-four mesh, non-corrodible screen on the ground storage tank overflow pipe to provide sanitary protection at all times.

FACILITY	CATEGORY	FINDINGS
TP001 Treatment Plant	Treatment	The potassium permanganate chemical feed tank is not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
FACILITY	CATEGORY	FINDINGS
TP001 Treatment Plant	Treatment	There is no secondary containment provided for the chemical being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment with a sufficient containment volume for the potassium permanganate storage tank.
FACILITY	CATEGORY	FINDINGS
1097010-011 Well #2 West Well (Emergency)	Source	The air release-vacuum relief valve piping is not covered by a 24 mesh corrosion resistant screen. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1097010-011 Well #2 West Well (Emergency)	Source	The pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1097010-010 Well #1 East Well	Source	The pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1097010-010 Well #1 East Well	Source	The screening on the air release-vacuum relief valve is broken. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screen to prevent the entrance of contaminants.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 Treatment Plant	Treatment	The point of entry (POE) sample tap is located on the treatment plant's plumbing and needs to be relocated for proper sampling. The tap must be located after all treatment processes, pumps, and storage tanks on a common pipe headed to the distribution system prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. As discussed during the survey, the water system is in the progress of installing a new hydropneumatic tank. The plan is to install a POE after the new hydropneumatic tank on a horizontal section of pipe before the first customer. This task must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers. OPH Region 4 engineering staff can be reached by phone at (337) 262-5634 to discuss appropriate locations for the new POE sample tap.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Hayden K. Keigley, P.E.

St. Martin Parish

Dear Mr. Cormier:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 31, 2018 sanitary survey inspection of the public water supply system for City of Breux Bridge Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

Breux Bridge Water System

## NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	System Management and Operation	An approved chemical lab status certification has not been obtained from LDH for analyzing the physical and chemical analytes currently being monitored by the water system. All public water systems must use an approved chemical laboratory to perform all required chemical analyses using approved laboratory methodologies. Review the required instruction at <a href="http://ldh.la.gov/assets/oph/CenterEH/engineering/SDWP/Lab_Approval_Instructions.pdf">http://ldh.la.gov/assets/oph/CenterEH/engineering/SDWP/Lab_Approval_Instructions.pdf</a> and complete the required form which can be located at <a href="http://ldh.la.gov/index.cfm/page/963">http://ldh.la.gov/index.cfm/page/963</a> under the heading "Approved Laboratory Form (Instructions)".
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 Distribution System	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been enforcing the CCCP. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL003 Elevated Tower #3	Finished Water Storage	The drain line for the elevated tower (or ground storage tank) has a direct connection to a storm drain. An air gap of 2 times the diameter of the discharge drain line must be provided. Provide a proper air gap to eliminate the direct physical connection and protect against the possibility of contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1099003-004 Well #4 (Northeast Well)	Source	The area around the well is wet due to excessive discharge from the well. The discharge from the well needs to be addressed.

**Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website at the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR001 Ground Storage Tank	Finished Water Storage	The screen for the ground storage overflow pipe is damaged. The overflow pipe must be screened with a twenty-four mesh, non-corrodible screen. Replace the damaged screen to provide sanitary protection at all times.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1099003-002 Well #2 (Southeast Well)	Source	The well's discharge piping is showing signs of rust, corrosion and flaking paint. The well's discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1099003-003 Well #3 - Emergency (Southeast Well)	Source	The well's discharge piping is showing signs of rust, corrosion and flaking paint. The well's discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1099003-004 Well #4 (Northeast Well)	Source	The well's outer casing and discharge piping are showing signs of rusting, corrosion, and flaking paint. The well's outer casing and discharge piping must be maintained to avoid further corrosion and deterioration. Clean, treat and paint the well's outer casing and discharge piping to prevent sources of potential contamination.

FACILITY	CATEGORY	FINDINGS
1099003-001 Well #1 (Southwest Well)	Source	The well's outer casing, casing vent piping and discharge piping are showing signs of rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping and discharge piping must be maintained to avoid further corrosion and deterioration. Clean, treat and paint the well's outer casing, casing vent piping and discharge piping to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1099003-006 Well #6 (Northwest Well)	Source	The well's outer casing, discharge piping and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, discharge piping and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, discharge piping and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
CECILIA WATER CORPORATION Public Water System  
PWS ID LA1099005  
ST MARTIN Parish

Dear Mr. Kennison:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 9, 2018 sanitary survey inspection of the public water supply system for CECILIA WATER CORPORATION (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Kyle Champagne	LDH Region IV Engineering
Bruce Guidry	Cecilia Water System

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Unaddressed Sanitary Defects from Level 2 Assessment dated August 5, 2016**

FACILITY	CATEGORY	FINDINGS
Management	Other	Field checks with LDH test equipment point to a possible issue with the chloramination process. The water system showed a very low reading for monochloramines at the POE. Guidance documents on the suggested level for this parameter supports a higher value than what was recorded during the field visit. Optimization is needed with this process.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	There are three aerolators that are being used in the treatment process. Aeration is not being used for treatment. These tanks are functioning as raw water storage with minimal chlorine injection. The poor condition of the tanks was cited in the sanitary survey dated Sept. 2, 2015. Recently, the aerolator housed within the treatment plant was modified. The upper structure for aeration was removed leaving the vessel open to air and possible contamination from animals, insects, and bugs. There are also some outward signs for rust on the rim of this tank that may be causing an issue with water quality.

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	There is a leak on the piping near Aerolator #3. This leak must be fixed to prevent the entrance of contaminants and to avoid further damage that could cause an interruption in the treatment process.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	Changes requiring a written approval from the state health officer were started and/or completed without authorization. A new tank has been installed to replace aerolator #1. Please submit to this office signed, stamped, and dated As-Built plans and specifications from a Louisiana licensed professional engineer for review and approval by LDH. Furthermore, any plans to construct, operate or modify to the extent that the capacity, hydraulic conditions, functioning of treatment processes, or the quality of finished water is affected, without, and except in accordance with the plans and specifications for the installation which have been approved, in advance, as part of a permit submitted by the person having responsible charge of a municipality owned public water supply or by the

		owner of a privately owned public water supply. The permit shall be issued by the state health officer prior to the start of such construction or modification. As noted in the Level 2 Assessment performed in 2016, aerolators #2 and #3 are in poor condition and need to be replaced. Formal approval must be gained through this office before these tanks are replaced.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been enforcing the CCCP and there were no current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.
FACILITY	CATEGORY	FINDINGS
1099005-003 - WELL 1 - CLOSEST TO TOWER SOUTH OF PLANT	Source	The well is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve. The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap.
FACILITY	CATEGORY	FINDINGS
1099005-004 - WELL #4 - CLOSEST TO STORAGE SHED	Source	The well's outer casing and steel base plate used to support the pump are showing signs heavy rusting, corrosion and pitting. The well's casing and pump support base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's

		casing and steel base plate to prevent sources of potential contamination. Also, there is a small hole developing near the concrete pad for the well which could hold water for extended periods of time. The hole needs to be filled to prevent ponding near the well site.
--	--	--

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The methods being used by the water system to check daily chlorine residuals were being performed incorrectly. Personnel should be training on how to correctly use the equipment that is being used to sample for chlorine residuals.
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED #2	Finished Water Storage	The elevated tower is not equipped with a pressure gauge or another way to monitor the water level in the tank. A pressure gauge or another way of monitoring the water level in this structure must be installed.
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED #2	Finished Water Storage	The finished water storage facility is not equipped with an approved sample tap. The finished water storage facility must be equipped with a smooth-nosed sampling tap. Install an approved tap on the tank to facilitate the collection of water samples for bacteriological and chemical analyses, when needed.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The brine tanks are not properly labeled. The brine tanks must be labeled with the name of the chemical being injected for treatment. Provide a label for the brine tanks.
FACILITY	CATEGORY	FINDINGS
1099005-003 - WELL 1 - CLOSEST TO TOWER SOUTH OF PLANT	Source	The well discharge piping is not equipped with a pressure gauge upstream of the check valve or a flow measuring device. A pressure gauge and a means for measuring flow must be provided. Install a device used to measure flow (or monitoring methods) from the well and a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1099005-003 - WELL 1 - CLOSEST TO TOWER SOUTH OF PLANT	Source	The well does not currently have an air release valve installed. The discharge piping shall where applicable, be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-

		turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1099005-002 - WELL #2 - BTWN MADELINE BLVD AND BCKWSH	Source	The well does not currently have an air release valve installed. The discharge piping shall where applicable, be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1099005-004 - WELL #4 - CLOSEST TO STORAGE SHED	Source	The well does not currently have an air release valve installed. The discharge piping shall where applicable, be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1099005-001 - WELL #3 - CLOSEST TO COULEE	Source	The well does not currently have an air release valve installed. The discharge piping shall where applicable, be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1099005-001 - WELL #3 - CLOSEST TO COULEE	Source	The well is not equipped with a means of measuring flow. A means of measuring flow must be provided.
FACILITY	CATEGORY	FINDINGS
1099005-002 - WELL #2 - BTWN MADELINE BLVD AND BCKWSH	Source	The well is not equipped with a means of measuring flow. A means of measuring flow must be provided.
FACILITY	CATEGORY	FINDINGS
1099005-004 - WELL #4 - CLOSEST TO STORAGE SHED	Source	The well is not equipped with a means of measuring flow. A means of measuring flow must be provided.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Kyle Champagne,  
825 Kaliste Saloom Road  
Brandywine 3, Suite 100  
Lafayette, LA 70508

The following compliance history is provided for your information

### **Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

Sample ID	Type	Date	Comment	Chlorine Residual	
				Free	Total

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Security	The tree line has overgrown the security fence for the water system facilities in some areas. Provisions must be made to trim the surrounding trees to prevent damage to the security fence.
FACILITY	CATEGORY	FINDINGS
1099006-003 - WELL #3	Source	The screening for the well's casing vent is broken. The well casing vent must be covered with a 24 mesh corrosion resistant screen. Replace the well casing vent screen to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1099006-002 - WELL #2	Source	The well is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve and shall terminate in a downward direction. The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap. A 12-inch clearance underneath the tap must be provided.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE TANK #2	Finished Water Storage	From review, the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior

		conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK #1	Finished Water Storage	From review, the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
HD001 - PRESSURE TANK	Finished Water Storage	From review, the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE TANK #2	Finished Water Storage	The finished water storage facility is not equipped with an approved sample tap. The finished water storage facility must be equipped with a smooth-nosed sampling tap. Install an approved tap on the tank in a downturned direction to facilitate the collection of water samples for

		bacteriological and chemical analyses, when needed.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE TANK #2	Finished Water Storage	The level gauge for the ground storage tank is broken. The level gauge must be repaired and brought back to working order, unless the water system implements another way of monitoring the water level in this structure.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT FOR WELL #2 & #3	Treatment	There is no secondary containment provided for the polymer being used for water treatment. Secondary containment must be provided for the liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage or failure of the primary containment system. Provide a secondary means of containment for the polymer storage tank with a sufficient containment volume.
FACILITY	CATEGORY	FINDINGS
1099006-003 - WELL #3	Source	The screening on the air release-vacuum relief valve is broken. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screen to prevent the entrance of contaminants.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Ebenezer Omojola,  
825 Kaliste Saloom Road  
Brandywine 3, Suite 100  
Lafayette, LA 70508

The following compliance history is provided for your information

### **Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

### **Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

Violation Number	Violation Date	Violation Type	Compliance Period
115	12/14/2017	INADEQUATE MIN CHLORINE RESIDUAL(GW&SW)	12/01/2017 - 12/31/2017

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-262-5746.

Respectfully,

Ebenezer Omojola,

PWS ID #: LA1099007  
St. Martin Parish

Dear Mayor Mitchell:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 31, 2018 sanitary survey inspection of the public water supply system for City of St. Martinville Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

City of St. Martinville

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### **Significant Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 Distribution System	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been enforcing the CCCP and there were no current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.

### **Minor Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website at the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.

FACILITY	CATEGORY	FINDINGS
1099007-002 Well #2 (Southeast Well)	Source	The well's outer casing is showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1099007-001 Well #1 (Northwest Well)	Source	The well's outer casing is showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

No observations were recorded in this category.

**Minor Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL001 Elevated Tower	Finished Water Storage	The overflow piping for the elevated tower terminates too close to the splash plate. The overflow piping discharge outlet must be installed at an elevation between 12 and 24 inches above the ground surface and discharge over a splash plate. Modify the existing overflow piping on the elevated tower to terminate at an adequate elevation above the ground surface and maintain proper discharging over the splash plate.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR001 Ground Storage Tank	Finished Water Storage	The screen for the ground storage tank overflow pipe is not adequate. The overflow pipe for the ground storage tank must be screened with 24 mesh, non-corrodible screen. Install a 24 mesh, non-corrodible screen on the ground storage tank overflow pipe to provide sanitary protection at all times.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	The ventilating fan in the chlorine gas storage room is currently not operational. Either the fan is broken or there is an electrical issue. The chlorine gas storage room must be equipped with a working ventilating fan.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	There is no secondary containment provided for the chemical being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment for the phosphate (TMB-451) storage tank with a sufficient containment volume.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1099008-005 Well #5	Source	The steel base plate used to support the wells pump are showing signs of rust. The pump support base plate must be maintained to avoid corrosion, deterioration and/or potential structural failure. Clean, treat and paint the steel base plate to prevent sources of potential contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1099008-003 Well #3	Source	The well's outer casing, casing vent piping, discharge piping, and the steel base plate used to support the pump are showing signs of rust, corrosion and flaking paint. The well's outer casing, casing vent piping, discharge piping, and pump support base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's casing, vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

"An Equal Opportunity Employer"

**Significant Deficiencies**

No observations were recorded in this category.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There is at least one (1) unapproved tap within the distribution system being used for chemical and bacteriological sampling (TCR-008). Sample taps used for collecting samples must be the smooth nozzle type. Install an approved smooth nozzle sample tap to decrease the possibility of submitting samples that test positive for coliform, which would result in a violation and public notification by the water system.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE TANK #2	Finished Water Storage	From review, the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK #1	Finished Water Storage	From review, the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE TANK #2	Finished Water Storage	The level gauge for the ground storage tank is broken. The level gauge shall be repaired and brought back to working order, unless the water system implements another way of monitoring the water level in this structure.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE TANK #2	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with twenty-four mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The light is currently not operational, either the bulb is burned or there is an electrical issue. The chlorine room must be equipped with a working light.
FACILITY	CATEGORY	FINDINGS
1099009-002 -	Source	Pressure gauges are installed on the discharge piping upstream of

WELL #2		check valves as a means to measure actual operating head conditions. The pressure gauge is currently installed downstream of the check valve. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
---------	--	--

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
PF002 - SERVICE PUMPS	Pump/pumping facility and control	The water system has only one functional pumping unit (i.e. motor and pump) installed in the service pumping facility. At least two pumping units shall be provided--each with sufficient capacity to supply the maximum pumping demand of the system. Please provide documentation that replacement equipment for the pumping facility has been provided.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.

#### Written Response Required

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1099025-002 - WELL #2	Source	The casing vent piping for the well is neither covered by a 24 mesh corrosion resistant screen nor terminating in the proper orientation. The casing vent piping must be covered with a 24 mesh corrosion resistant screen, terminating in a down turned position to prevent the entrance of contaminants.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological test and chemical test results reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, the bacteriological test results and Lead & Copper sampling records and results were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH.
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site (1367 N Chess Broussard Rd) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the ACR residual monthly at the approved location described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Form" (Report #3) which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms for the ACR site.

"An Equal Opportunity Employer"

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT	Treatment	The chemical feed tank is not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the chemical manufacturer on the feed tank.
FACILITY	CATEGORY	FINDINGS
1099025-001 - WELL #1	Source	The well does not currently have an air release-vacuum relief valve installed. The discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh, corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1099025-002 - WELL #2	Source	The well does not currently have an air release-vacuum relief valve installed. The discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh, corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1099025-001 - WELL #1	Source	The well is not equipped with a dedicated check valve, a pressure gauge, or a means for measuring flow at a point where positive pressure is maintained. A dedicated check valve, pressure gauge, and means for measuring flow must be provided. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure operating head conditions, and a means for measuring flow must be provided to detect any changes in operating conditions. Install a device (or monitoring methods) to measure flow from the well, a dedicated check valve downstream of the raw water tap (to isolate the well from finished water and other sources), and a pressure gauge on the well discharge piping (upstream of the check valve) to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1099025-002 - WELL #2	Source	The well's discharge piping does not appear to be equipped with a dedicated check valve or a flow measuring device. A dedicated check valve and a means for measuring flow must be provided to detect any changes in operating conditions. Install a device or monitoring methods used to measure flow from the well and a dedicated check valve downstream of the raw water tap on the well's discharge piping to isolate the well from finished water and other sources

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

Re: Class I Sanitary Survey  
ST MARTIN PARISH WW DISTRICT 3 - CADE Public Water System  
PWS ID LA1099028  
ST MARTIN Parish

Dear Mr. Cedars:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the September 20, 2018 sanitary survey inspection of the public water supply system for ST MARTIN PARISH WW DISTRICT 3 - CADE (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Ebenezer Omojola	LDH OPH Region IV Engineering
Brian F. Guillory	St Martin Parish Government

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The water system is not under the control and supervision of a duly certified operator. The water system, per population and system design at the time of the survey, must be placed under the supervision and control of a certified operator holding at least level 2 certifications in the categories of Water Treatment, Water Production, and Water Distribution. The operator certification office can be reached by phone at (225) 342-7508. The operator certification website is located on LDHs website using the following link: <a href="http://www.dhh.louisiana.gov/index.cfm/page/416">http://www.dhh.louisiana.gov/index.cfm/page/416</a> .
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The list of customers with backflow devices being managed by the water system is outdated and testing reports for the cross connection control devices could not be confirmed. An updated customer listing should be compiled showing applicable customers, addresses, number and type of installed devices, and the most recent date of inspection. All commercial customers should be assessed for proper backflow prevention devices. The water system must have a procedure for addressing existing customers that do not currently have the required protection device or a current inspection report. All cross connection control devices must be tested annually by a certified tester. Please feel free to call this office to discuss the required protection for any customer on the water system.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all

Office of Public Health • Acadian Region IV

825 Kaliste Saloom Rd • Brandywine 3 • Ste. 100 • Lafayette, Louisiana 70508  
Phone #: 337-262-5311 • Fax #: 337-262-5638 • [www.ldh.la.gov](http://www.ldh.la.gov)

"An Equal Opportunity Employer"

		locations tested. Begin measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	From review, the elevated tower should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the elevated tower's interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the water tower could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	The splash plate for the elevated tower's overflow is damaged and does not drain away from the tower foundation. The splash plate must be repaired and graded to drain away from the tower foundation to prevent erosion.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT	Treatment	The chemical feed tanks are not properly labeled. The chemical feed tanks must be labeled with the name of the chemicals being injected for treatment. Provide a label from the manufacturer on the chemical feed tanks.
FACILITY	CATEGORY	FINDINGS
1099028-001 - WELL #1	Source	The well's packing, outer casing seal, and steel base plate must be maintained to avoid corrosion. Clean the well's packing, outer casing seal, and steel base plate to prevent corrosion.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

Office of Public Health • Acadian Region IV

825 Kaliste Saloom Rd • Brandywine 3 • Ste. 100 • Lafayette, Louisiana 70508  
Phone #: 337-262-5311 • Fax #: 337-262-5638 • [www.ldh.la.gov](http://www.ldh.la.gov)

"An Equal Opportunity Employer"

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT	Treatment	The chlorine gas cylinders are not properly secured. Full and empty cylinders of chlorine gas must be restrained in position at all times to prevent upset. Properly secure all chlorine gas cylinders.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap must be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. The water system has selected a location for the new POE tap, immediately outside of the fence for the water system facilities. Please provide GPS coordinates when the tap has been installed. This task must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
11/19/2015	12/01/2015	Sanitary Survey, Finished	Minor	Source	2099037-003-WELL #3 - SOUTHEAST WELL
<b>Comments:</b> The discharge piping shall have all exposed piping, valves and appurtenances protected from physical damage including rust.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
07/26/2012	08/24/2012	Sanitary Survey, Finished	Significant	Distribution System	DS0950-DISTRIBUTION SYSTEM
<b>Comments:</b> A formal cross connection control program is not in place. Policies and procedures must be in place to ensure that the water supply is protected against potential contamination from certain of its customers by the proper selection, installation, maintenance, and testing of backflow prevention containment devices as per LAC 51:XIV.D106. This should include an ordinance as well as written policies and procedures for the implementation of that ordinance. The policy should include identification of customers to be isolated from the water supply and the selection, installation, maintenance, and field testing of backflow prevention devices as per LAC 51:XIV.606 and LAC 51:XIV Appendix D. The Manual for the Selection, Installation, Maintenance, and Field Testing of Backflow Prevention Devices, CAN/CSA-B64.10-94 should be adopted, as it supplements the customer or fixture types, in tables D104 and D105 of LAC 51:XIV.D to be protected by backflow prevention devices.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	During the survey, there were severe leaks observed in the transmission lines feeding into the distribution system and the distribution system piping located in the treatment plant behind the filter gallery. Water systems that provide potable water to its customers must prevent any leakage within the distribution system by keeping it properly maintained at all times. It is imperative that these leaks be repaired immediately with minimum interruption of service to the customers.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	Testing reports for the cross connection control devices could not be confirmed. All cross connection control devices must be tested annually by a certified tester.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The backflow prevention assembly at the treatment plant site appears to be malfunctioning. The backflow prevention device must be repaired and maintained to prevent the possibility of unsafe water entering the public water supply.

Re: Class I Sanitary Survey  
ATCHAFALAYA BASIN LANDING WATER SYSTEM Public Water System  
PWS ID LA2099008  
ST MARTIN Parish

Dear Mr. Freedman:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 18, 2018 sanitary survey inspection of the public water supply system for ATCHAFALAYA BASIN LANDING WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Ebenezer Omojola	LDH OPH Region IV Engineering
John Wayne Vincent	Star Environmental Services

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
2099008-001 - WELL #1	Source	The well is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve and shall terminate in a downward direction. The sample tap must be of the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap. A minimum clearance of 12 inches must be provided underneath the raw water sample tap.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	A review of the "LDH Approved Chlorine Residual Forms" for the water system revealed multiple dates during which the recorded free chlorine residuals were below the minimum 0.50 mg/L disinfection requirement. The water system must begin to utilize the section of the chlorine residual forms designated for recording corrective actions taken to increase the free chlorine residual above the minimum requirement in the event of a treatment malfunction.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	All RV sites must be equipped with dual check valve assemblies. Please submit a written course of action, for review and approval, which details a timeline for installing the required protection at the RV sites. The specifications for any device to be installed must be submitted for review and approval by this office. Do not make any changes to the existing water system without prior written approval or understanding.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological and chemical test result reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, some bacteriological sampling test results were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The pump intake for the chemical application of the sodium hypochlorite is below the level line of the chemical within the feed tank. The pump must be placed in a position of positive pressure above the highest possible chemical level line of the feed tank.
FACILITY	CATEGORY	FINDINGS
2099010-002 - WELL #2	Source	The well's discharge piping is not equipped with a flow-measuring device. A means for measuring flow must be provided. Install a device or monitoring methods to measure flow from the well and to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

Re: Class I Sanitary Survey  
Butte LaRose Rest Area Water System  
PWS ID #: LA2099036  
St. Martin Parish

Dear Mr. Duhon:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 28, 2018 sanitary survey inspection of the public water supply system for Butte LaRose Rest Area Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Hayden K. Keigley	LDH/OPH Region 4 Engineering
Ryan Duhon	Butte Larose Rest Area Water System

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

No unresolved observations were recorded in this category.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The current Monitoring Plan for the water system needs to be updated. All public water systems must have a monitoring plan that includes all required routine compliance samples to be collected for the monitoring period. Every sampling site must have the correct address and a brief description of the physical location of the sample tap. Update and resubmit the Monitoring Plan for LDH review and approval. OPH Region 4 engineering staff can be reached by phone at (337) 262-5634 to discuss the review and approval of the monitoring plan. The Monitoring Plan Portal for the public water system can be found on LDH's website at: <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a>
FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The water system is not under the control and supervision of a duly certified operator. The water system, per population and system design at the time of the survey, must be placed under the supervision and control of a certified operator holding at least level 2 certifications in the categories of Water Production and Water Distribution. The operator certification office can be reached by phone at (225) 342-7508. The operator certification website is located on LDH's website using the following link: <a href="http://www.dhh.louisiana.gov/index.cfm/page/416">http://www.dhh.louisiana.gov/index.cfm/page/416</a>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	There is currently an inadequate amount of TCR sampling taps in the distribution system. At least five (5) suitable sample taps must be provided in the distribution system for total coliform monitoring. For smaller systems, a point of collection or sample tap shall be identified for/at each service connection. Total coliform sampling must be rotated amongst all eligible TCR taps on the monitoring plan. The MRT point is considered a TCR point eligible for bacteriological monitoring. TCR taps must not be reused for bacteriological compliance monitoring until a full rotation of all TCR taps has been conducted. To facilitate proper sample collection, there must be at least 12 inches of clearance below the nozzle of the tap(s). This includes the distance above grass or weeds. OPH Region 4 Engineering staff can be reached by phone at (337) 262-5634 about the review and approval of the plan. The water system can update and complete the required plan by logging into the Monitoring Plan Portal on LDH's website at the following link: <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a>
FACILITY	CATEGORY	FINDINGS
2099036-001 Well #1	Source	There is currently no pressure gauge installed on the discharge piping of the well. A pressure gauge must be installed on the discharge piping upstream of the check valve as a means to measure the actual operating head conditions. Install a pressure gauge on the well discharge piping to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
Berwick Bayou Vista WW Commission  
PWS ID LA1101002  
ST MARY Parish

Dear Mr. Adams Jr:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 30, 2018 sanitary survey inspection of the public water supply system for Berwick Bayou Vista WW Commission. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## **NOTICE OF VIOLATIONS**

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a) (4) (GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
04/05/2017	04/05/2017	Sanitary Survey, Finished	Minor	Operator Compliance with State Requirements	Management
<b>Comments:</b> System is operating one shift every other week with an uncertified operator.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
04/28/2015	04/28/2015	Water Treatment Plant Site Visit	Minor	Treatment	TP001-SURFACE WATER TREATMENT PLANT
<b>Comments:</b> Pressurized chlorine feed lines shall not carry chlorine gas beyond the chlorinator room.					

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	40 CFR 141.403 and LAC 51:XII.309.A - All public water supplies shall be under the supervision and control of a duly certified operator as per requirements of the State Operator Certification Act, Act 538 of 1972, as amended. System needs more class 3, or above, certified operators. System currently operates two shifts without a duly certified operator.

FACILITY	CATEGORY	FINDINGS
Management	Other	LAC 51:XII.343.A - No Physical Connection with Non-Potable Source; 40 CFR 141.403 and LAC 51:XII.343.A - There shall be no physical connection between a public water supply and any other water supply which is not of equal sanitary quality and under an equal degree of official supervision. And there shall be no connection or arrangement by which unsafe water may enter a public water supply system. Both raw and finished water pumping stations shall provide suitable outlet for drainage from pump glands without discharging onto the floor. The drainage from the pump glands for the high service pumps are discharging into the clearwell and need to be rerouted to eliminate this cross connection. <b>See Attachment #4 and #2</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	40 CFR 141.403 and LAC 51:XII.1111.B - Service thermometers, thermocouples, and other temperature measuring devices used for determining water temperature within the water treatment plant shall be validated at a frequency of once per month using a field thermometer that has been calibrated annually against a NIST certified thermometer. Systems' NIST certified thermometer is expired and system needs a new thermometer with a current certification certificate.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	40 CFR 141.403 and LAC 51:XII.1111.C - Records of validations/calibrations on each temperature-measuring device shall be maintained for at least three years. Once system acquires a NIST certified thermometer, it needs to calibrate temperature-measuring devices and maintain associated records.

FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	40 CFR 141.403 and TSS 5.1.11.g - Tanks and tank refilling line entry points shall be clearly labeled with the name of the chemical contained. All tanks must be labeled and labeled properly. Filter aid is mislabeled as copper sulfate.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	40 CFR 141.403 and TSS 2.18 - Consideration must be given to the safety of water plant personnel and visitors. The design must comply with all applicable safety codes and regulations that may include the Uniform Building Code, Uniform Fire Code, National Fire Protection Association Standards, and state and federal OSHA standards. Items to be considered include noise arresters, noise protection, confined space entry, protective equipment and clothing, gas masks, safety showers and eye washes, handrails and guards, warning signs, smoke detectors, toxic gas detectors and fire extinguishers. Safety shower and eyewash station has a busted water line and needs repairing. <b>See Attachment #3</b>

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Teche Region III  
Attn: Frank Naquin, R.S.  
1434 Tiger Drive  
Thibodaux, Louisiana 70301

The following compliance history is provided your information

### **Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

**No Positive Samples were reported in the past year.**

### **Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

Violation Date	Sample Result	Maximum Contaminant Level	Analyte	Compliance Period
09/24/2018	NA	NA	CHLORITE	08/01/2018 - 08/31/2018

Other Violations during the past year

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 985-449-5007 ext. 337.

Respectfully,

Frank Naquin, R.S.

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	Sanitary seal on well is corroded and could lead to contamination of well. Ground storage tank is corroded. Check valves on site are corroded.  Critical water system component is in poor condition or defective and indicative of failure or imminent failure. Component failure is expected to critically impact the quality and/or quantity of produced water.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	A backflow ordinance has been adopted, but not initiated. There are no records of installed or tested backflow prevention devices. A cross-connection control program shall be developed and implemented.  40 CFR 141.403 and LAC 51:XII.344 - Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	The exterior coating of the ground storage tank is in poor condition. There are numerous places where the paint is completely worn away and corrosion has formed.  40 CFR 141.403 and TSS 7.0.17 - Proper protection shall be given to metal surfaces by paints or other protective coatings, by cathodic protective devices, or by both.

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	<p>The ground storage tank overflow does not point down, and does point directly towards the chemical storage building.</p> <p>40 CFR 141.403 and TSS 7.0.7 - All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.</p>

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

**No observations were recorded in this category.**

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	40 CFR 141.403 and TSS 8.3 - A sufficient number of valves shall be provided on water mains to minimize inconvenience and sanitary hazards during repairs. Valves should be located at not more than 500 foot intervals in commercial districts and at not more than one block or 800-foot intervals in other districts. Where systems serve widely scattered customers and where future development is not expected, the valve spacing should not exceed one mile. Valve, Meter and Blow-Off Chambers -Wherever possible, chambers, pits or manholes containing valves, blow-offs, meters, or other such appurtenances to a distribution system, shall not be located in areas subject to flooding or in areas of high groundwater. Such chambers or pits should drain to the ground surface, or to absorption pits underground. The chambers, pits and manholes shall not connect directly to any storm drain or sanitary sewer. Blow-offs shall not connect directly to any storm drain or sanitary sewer. System has a number of valves that do not work and should be repaired or replaced.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

## **NOTICE OF VIOLATIONS**

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a) (4) (GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	40 CFR 141.403 and LAC 51:XII.344 - Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. System needs an approved backflow device when attaching hoses to hydrants. The hydrant next to the Saturn Tower had a hose attached to it without backflow protection. <b>See Attachment #1 and #2; System</b> has an incomplete Cross Connection Control Program and needs to fully implement and enforce the program.

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL002 - HWY 182 TOWER	Finished Water Storage	40 CFR 141.403 and TSS 7.0.7 - All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate. A splash pad is needed for tower overflow to prevent erosion. Overflow is full of debris and needs cleaning.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

ST MARY Parish

Dear Mr. Begnaud:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 18, 2018 sanitary survey inspection of the public water supply system for BAYVIEW DEVELOPMENT (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	The sight glass tube installed on the storage tank was not working at the time of inspection. The tank must be equipped with a water sight glass if there is no automated control to main the proper water-to-air ratio in the tank. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1 OF 1	Treatment	A calibration tube or mass flow monitor was not installed at time of inspection. Calibration tube shall be installed to monitor and adjust feeding rate.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1 OF 1	Treatment	There was no secondary containment for the sodium hypochlorite storage at the time of inspection. A receiving basin capable of receiving accidental spills or overflows must be provided. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
1103004-001 - WELL #1 @ AZALEA LANE T/P	Source	There is no concrete slab around the well head at the time of inspection. A concrete slab is required that will be at least 4 inches thick and cover 30 inches from the well casing as delineated in the Louisiana Water Well Rules, Regulations, and Standards Section 2.8.3.0. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
1103004-001 - WELL #1 @ AZALEA LANE T/P	Source	There was no flow meter on the well discharge pipe at the time of inspection. A flow meter is required for the well discharge pipe.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

A high chlorine residual more than 4.6 ppm was measured at the time of inspection; however, inadequate chlorine level was reported by LDH sanitarian several times as listed in violation history. It is highly recommended a flow meter and a calibration tube be installed and the operator be familiar with dosage calculation to monitor actual chemical dosage. A 0.5 ppm free ammonia was detected at the raw water tap during the survey, which means the well is located in the area containing naturally occurred ammonia. It is highly recommended the operator be alert of the existence of natural occurring ammonia and adjust chemical feeding rate accordingly or take other applicable measures to maintain the required free chlorine residual consistently or submit plans to convert to a chloramine systems.

### **Written Response Required**

Re: Class I Sanitary Survey  
EDEN ISLES WATER SUPPLY Public Water System  
PWS ID LA1103013  
ST TAMMANY Parish

Dear Mr. Miller:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 12, 2018 sanitary survey inspection of the public water supply system for EDEN ISLES WATER SUPPLY (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

**Name**

Poppi W Crain  
Angela Gomez  
John Earl Miller, Sr

**Organization**

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

Office of Public Health • Southeast Region IX

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	At the time of the site visit it was observed at the Primary Well (Well No. 1) that the motor had been installed directly on the well casing without the benefit of a foundation for support. To ensure the integrity and ongoing production of the well for the water system the motor shall be properly installed with a foundation support. <b>See Attachment #1</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The LaMotte DC1500 colorimeter kit application is used for industrial water boiling and cooling. The Standard Method 4500 is the methodology used for this particular kit, however the kit does not account for readings over 4.0. The ability to determine such readings should be available to the operator. It is recommended that the operator obtain a colorimeter that allows for both high and low range chlorine. A copy of the manufacturers recommended usage of the colorimeter and its suggested uses is attached for determination.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	Valves should be exercised consistently to ensure all are working.
FACILITY	CATEGORY	FINDINGS
1103013-001 - EDEN ISLES WELL #1	Source	All areas surrounding the well shall be graded to allow for immediate and proper draining.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	The well site should be cleared of debris and all unused inoperable parts. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
TP001 - TP EDEN ISLES WELL # 1 & 2	Treatment	As per previous noted recommendations, the one ton cylinders are not protected from direct sunlight. <b>See Attachment #2</b>

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### Unresolved Observations

Visit Date	Notify Date	Reason	Severity	Category	Facility
03/23/2017	04/03/2017	Formal Enforcement	Significant	Security	Management
<b>Comments:</b> All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked and areas shall be locked when unattended. The fence shall be resistant to climbing and at least 6 feet high. At the time of the site visit; the well head, treatment plant, pumps, and storage tank were not within a fenced or secured area.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
03/23/2017	04/03/2017	Formal Enforcement	Significant	Source	1103032-001-ST JOSEPH ABBY WELL #1
<b>Comments:</b> The discharge piping shall be protected against the entrance of contamination. At the time of the site visit, a considerable amount of rust and pipe deterioration was apparent within the pump house.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
05/27/2014	05/28/2014	Sanitary Survey, Finished	Minor	Source	1103032-001-ST JOSEPH ABBY WELL #1
<b>Comments:</b> The water system is served by a single well. A minimum of two sources of groundwater should be provided.					

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	At the time of inspection, the well was not inside a fenced area that was capable of being locked. Also, the pump house and treatment unit were not capable of being locked. All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked <b>See Attachment #9 and #3</b>
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	At the time of inspection, standby power was not

		provided. Dedicated Standby power shall be provided by any community water supply to ensure continuous service when the primary power has been interrupted.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, a cross connection plan was not provided. All community systems shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1103032-001 - ST JOSEPH ABBY WELL #1	Source	At the time of inspection, a raw water tap was not provided. All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
1103032-001 - ST JOSEPH ABBY WELL #1	Source	At the time of inspection, a second source was not provided. All community water systems shall be provided. Refer to 40 CFR 141.403 and LAC 51:XII.169.B.2

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, some sample taps were threaded taps. Smooth nozzle taps are to replace threaded taps and are to be provided throughout the distribution system. See <b>Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
1103032-001 - ST JOSEPH ABBY WELL #1	Source	At the time of inspection, the well casing and its piping is exhibiting rust. The well casing, as all well appurtenances, must be protected from physical damage, including that from corrosion. See <b>Attachment #7 and #8</b>
FACILITY	CATEGORY	FINDINGS
1103032-001 - ST JOSEPH ABBY WELL #1	Source	At the time of inspection, the well was not on a slab. A concrete slab is required that will be at least 4 inches thick and cover 30 inches from the well casing as delineated in the Louisiana Water Well Rules, Regulations, and Standards Section 2.8.3.0. Also, ground water sources shall project at least 12" above the concrete slab and 18" above the ground surface. See <b>Attachment #2</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

<b>Comments:</b> LAC 51:XII.355.A - Routine, continuous disinfection is required of all public water systems. The current treatment plant is not operational. Treatment plant must be made operational prior to the startup of well #3.					

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	At the time of inspection, the required injection of corrosion inhibitors ordered by Administrative Order C-96-103-021 had been discontinued.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	Ordinance for cross connection control shall be enforced with records maintained of proper installation and annual testing of back flow devices installed.
FACILITY	CATEGORY	FINDINGS
1103038-001 - SUN WELL #1	Source	Permanent casing for all groundwater sources shall project at least 12 inches above the pump house floor or concrete apron surface and at least 18 inches above final ground surface. Address accordingly.
FACILITY	CATEGORY	FINDINGS
1103038-002 - SUN WELL #2	Source	Storage of machinery and repair of equipment shall be removed from the well sites to prevent possible contamination for diesel and all other fluids used in machinery. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
1103038-000 - abandoned well	Source	The capped well located in the maintenance area (well registration number 103-600) shall

		be properly plugged and abandoned as per regulation requirements. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
1103038-002 - SUN WELL #2	Source	Well # 2 has openings at the well casing for entrance of contaminants. The sanitary seal is corroded. The entry of the electrical wiring to the submersible pump is not sealed and wiring is not enclosed in conduit. <b>See Attachment #1</b>

#### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Records are not available at the time of inspection and are required to be kept on file for no less than 10 years.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	All chemicals used for treatment are to be stored in dry storage. Containers of sodium hypochlorite are to be housed and protected from sunlight.

#### Written Response Required

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southeast Region IX

Re: Class I Sanitary Survey  
SLIDELL WATER SUPPLY Public Water System  
PWS ID LA1103041  
ST TAMMANY Parish

Dear Mr. Drennan:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 23, 2018 sanitary survey inspection of the public water supply system for SLIDELL WATER SUPPLY (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

Billy Palmisano	City Of Slidell

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

**No observations were recorded in this category.**

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
TP001 - ROBERT ROAD WELL	Treatment	Chlorine gas cylinders at Robert Road Well site were not enclosed at the time of inspection. Chlorine gas feed and storage shall be enclosed and separated from other operating areas. The chlorine room shall be provided with a shatter resistant inspection window installed in an interior wall, constructed in such a manner that all openings between the chlorine room and the remainder of the plant are sealed, and provided with doors equipped with panic hardware, assuring ready means of exit and opening outward only to the building exterior. <b>See Attachment #1</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - ROBERT ROAD WELL	Treatment	POE sampling tap at Robert Road Well was threaded type at the time of inspection. POE sampling tap can be used for both chemical and bacteriological sampling and thus a smooth-nosed type is required. Please replace all threaded POE sampling taps with smooth-nosed taps. <b>See Attachment #2</b>

### **Written Response Required**

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals shall be measured in accordance with the analytical methods set forth in Section 1105.C of this Part and as per the manufacture's manual and specifications for the test kit. At the time of the site visit the test kit in use was a Hach Colorimeter Chlorine/pH. This kit states, "If the chlorine concentration is typically less than 2 mg/L, use the chlorine low range (LR) procedure." The test method being utilized was also not per the manufacture's manual.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	Standard Operating Procedures shall be developed for: <ul style="list-style-type: none"> <li>• Chlorine residual test methods,</li> <li>• Chlorine monitoring at the wells and throughout the distribution system, and</li> <li>• Chlorine dosing at the wells</li> </ul> These SOP's shall be submitted to the Region IX office for review and approval.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1 and TP002 - WELL #2	Treatment	General equipment design shall be such that feeders will be able to supply, at all times, the necessary amounts of chemicals at an accurate rate throughout the range of feed. A properly sized chlorine feed pump operates between 20 to 80 percent of feed range.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1 and TP002 - WELL #2	Treatment	Provisions shall be made for measuring the quantities of chemicals used. Calibration tubes or mass flow monitors which allow for direct physical checking of actual feed rates shall be fitted. Chemical feed rates shall be proportional to flow. The system is currently operating with no means of measuring the well flow nor determining the actual feed rate or daily chlorine usage of the sodium hypochlorite.
FACILITY	CATEGORY	FINDINGS
1103053-001 - CROSS GATES WELL #1 (STEELE RD) and 1103053-002 - CROSSGATES WELL #2 (WILLOW WOOD)	Source	The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained. At the time of the site visit the well was not equipped with a means for measuring flow.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 30 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 30 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1 and TP002 - WELL #2	Treatment	Sample taps shall be provided so that water samples can be obtained from appropriate locations in each unit of operation of treatment, and from the finished water. Taps shall be consistent with sampling needs and shall not be of the petcock type. Taps used for obtaining samples for bacteriological analysis shall be of the smooth-nosed type without interior or exterior threads. shall not be of the mixing type, and shall not have a screen, aerator, or other such appurtenance. The POE sample taps are currently on the inlet side of the hydropneumatic tank. to be able to adequately determine the water quality being provided to the distribution system the POE sampling point should be on the outlet side of the storage tank.

### **Written Response Required**

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	Some fence boards at the Steel Road Well site were damaged at the time of inspection. The fence shall be repaired or replaced. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The Steele Road well site was not equipped with standby power at the time of inspection, Dedicated Standby power shall be provided by any community water supply and any non-community water supply serving a hospital so that water may be treated and/or pumped to the distribution system during outages to meet the average daily demand during the month of maximum water use per LAC51:XII.135.A.
FACILITY	CATEGORY	FINDINGS
1103053-001 - CROSS GATES WELL #1 (STEELE RD)	Source	One of the gate valves located on the discharge piping of the Steele Road Well was leaking at the time of inspection. It shall be repaired or replaced to prevent the introduction of contamination into the well discharge piping per LAC XII.319.D.7. <b>See Attachment #2</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	The electrical box on the Steele Road Hydropneumatic Tank was open with no cover. The box must be securely covered. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
1103053-001 - CROSS GATES WELL #1 (STEELE RD)	Source	The well vent screen at the Steele Road Well site was damaged at the time of inspection. A 24 mesh, corrosion resistant screen shall be installed to prevent the entrance of foreign matters per LAC 51:XII.169.H.6.b.ii. <b>See Attachment #4</b>

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to**

**correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

It is recommended that the water system perform well tests annually and perform tank inspection every five years to ensure water production and water quality.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southeast Region IX  
Attn: Jie Gu, P.E.  
42354 Deluxe Plaza, Suite 13  
Hammond, Louisiana 70403

The following compliance history is provided for your information

### **Bacteriological Sampling History**

#### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

### **Violation History**

#### **Monitoring Violations during the past year**

Violation Number	Violation Date	Analyte	Compliance Period
1006533	03/14/2018	CHLORINE	06/01/2017 - 06/30/2017

#### **Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

Violation Number	Violation Date	Violation Type	Compliance Period
1006543	05/30/2018	INADEQUATE MIN CHLORINE RESIDUAL(GW&SW)	05/01/2018 - 05/31/2018
1006532	03/02/2018	INADEQUATE MIN CHLORINE RESIDUAL(GW&SW)	03/01/2018 - 03/31/2018
1006530	12/20/2017	PUBLIC NOTICE RULE LINKED TO VIOLATION	

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 985-543-4958.

Re: Class I Sanitary Survey  
ST TAMMANY WATER DISTRICT 3 Public Water System  
PWS ID LA1103056  
ST TAMMANY Parish

Dear Mr. Cordell:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 27, 2018 sanitary survey inspection of the public water supply system for ST TAMMANY WATER DISTRICT 3 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### **Parties Present**

<b>Name</b>	<b>Organization</b>
Teresa Benton	LDH/OPH District II Engineering Services
Jeff Bertoniere	Curtis Environmental Services

### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

Office of Public Health • Capitol Region II

P.O. Box 4489 • Baton Rouge, Louisiana 70821

Phone #: 225-342-7499 • Fax #: 225-342-7607 • [www.ldh.la.gov](http://www.ldh.la.gov)

"An Equal Opportunity Employer"

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
03/26/2014	05/20/2014	Sanitary Survey, Finished	Significant	Distribution System	DS0950-DISTRIBUTION SYSTEM
<b>Comments:</b> A formal cross connection control plan is required.					

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	Critical water system component is in poor condition or defective and indicative of failure or imminent failure. Component failure is expected to critically impact the quality and/or quantity of produced water. The Chemical feed into the discharge pipe is significantly corroded. The cause of the corrosion needs to be identified and corrected so no further damage is done to the discharge pipe. See <b>Attachment #1</b>
Management	Security	All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked and areas shall be locked when unattended. The fence shall be resistant to climbing and at least 6 feet high. The fence at the Country Club Well is in disrepair. See <b>Attachment #2</b>

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Complete daily records of the operation of a public water system, including reports of laboratory control tests, shall be kept and retained as prescribed in the National Primary Drinking Water Regulations on forms approved by the state health officer. When specifically requested by the state health officer or required by other requirements of this Part, copies of these records shall be provided to the office designated by the state health officer within 10 days

		following the end of each calendar month. Additionally, all such records shall be made available for review during inspections/sanitary surveys performed by the state health officer.
DS0950-Distribution System	Distribution	The water supply must provide suitable taps which draw water directly from the mains or the service lines. Such taps provide for samples which are most representative of the quality of water provided without "interference" which may be caused by plumbing problems within residences or other structures. Use of such taps decreases the chance of "bad samples" resulting in a coliform maximum contaminant level (MCL) violation which requires public notification by the public water supply and an administrative enforcement action by the EPA/DHH against the public water supply. Some of your POE sample taps are threaded. <b>See Attachment #3</b>
ST	Finished Water Storage	The overflow for a ground- level storage reservoir shall open downward and be screened with twenty-four mesh non-corrodible screen. The screen shall be installed within the overflow pipe at a location least susceptible to damage by vandalism. If a flapper valve is used, a screen shall be provided inside the valve. <b>See Attachment #4</b>
ST	Finished Water Storage	All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate. A splash plate is needed. <b>See Attachment #5</b>
TP001	Treatment	Liquid chemical storage tanks must have a liquid level indicator and have an overflow and a receiving basin capable of receiving accidental spills or overflows without uncontrolled discharge. A common receiving basin may be provided for each group or compatible chemicals, that provides sufficient containment volume to prevent accidental discharge in the event of failure of the largest tank. Secondary containment is in need of repair. <b>See Attachment #6</b>

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001	Treatment	Weighing scales shall be provided for weighing cylinders at all plants utilizing chlorine gas. See <b>Attachment #7</b>
TP001	Treatment	Full and empty cylinders of chlorine gas should be isolated from operating areas, restrained in position to prevent upset, stored in rooms separate from ammonia storage, and stored in areas not in direct sunlight or exposed to excessive heat. See <b>Attachment #8</b>
TP002	Treatment	Adequate housing must be provided. At the time of the inspection the door of the chlorine room was in disrepair. See <b>Attachment #9</b>
TP002	Treatment	Weighing scales shall be provided for weighing cylinders at all plants utilizing chlorine gas. See <b>Attachment #7</b>

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Capitol Region II  
Attn: Teresa Benton, R.S.  
P. O. Box 4489, Bin #10, Bienville Bldg.  
Baton Rouge, Louisiana 70821-4489

The following compliance history is provided for your information

#### **Bacteriological Sampling History**

##### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 225/342-7598.

Respectfully,

A handwritten signature in black ink, appearing to read "Teresa Benton". The signature is fluid and cursive, with the first name "Teresa" and last name "Benton" clearly distinguishable.

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The monitoring plan was returned on 9/19/2017 and has not been submitted yet. Please submit as soon as possible.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Daily chlorine residual within the distribution system was not measured and recorded daily on the state approved forms at the time of inspection. Chlorine residuals must be monitored daily at the water production (POE) site and a critical point (MRT)--the furthest location in the water system. And an additional chlorine residual check must be made monthly at the ACR site.
FACILITY	CATEGORY	FINDINGS
BL003 - BLADDER TANK 3	Finished Water Storage	There was a threaded tap installed downstream the storage tanks at the time of inspection. The threaded tap needs to be replaced with smooth-nosed tap. See <b>Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
1103072-001 - HOMELAND HEIGHTS WELL	Source	At the time of the inspection, it was noted the well casing did not project 12 inches above the pumphouse floor. Permanent casing for all groundwater sources shall project at least 12 inches above the pumphouse floor or concrete apron surface and at least 18 inches above final ground surface. See <b>Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
1103072-001 - HOMELAND HEIGHTS WELL	Source	There was no flow meter on the well discharge pipe at the time of inspection. A flow meter is required for the well discharge pipe.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
1103072-001 - HOMELAND HEIGHTS WELL	Source	At the time of inspection there was no secondary source of water. A minimum of two sources of groundwater shall be provided.

It is highly recommended that the system operator conduct a free ammonia analysis on the raw water since the well is located in an area containing naturally occurred ammonia. It is recommended that the operator be familiar with dosage calculation and set an appropriate chlorine feeding rate to maintain the required chlorine residual. It is also recommended the system to upgrade the storage capacity to ensure the disinfectant contact time.

Management	Other	Other condition which is deemed by the state health officer to be a significant deficiency. The control panel for the water system was uncovered which is a safety hazard and could potentially cause a system failure. A cover shall be installed to protect the operator as well as the system. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	40 CFR 141.403 and LAC 51:XII.343.A - There shall be no physical connection between a public water supply and any other water supply which is not of equal sanitary quality and under an equal degree of official supervision. and there shall be no connection or arrangement by which unsafe water may enter a public water supply system. At the time of the visit, there was a direct connection between the distribution system and several washing machines. A backflow prevention device or vacuum breaker shall be installed at each washing machine connection to prevent possible contamination of the treated water in the distribution system. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
1103081-001 - KTERI APTS WELL	Source	40 CFR 141.403 and LAC 51:XII.327.A.15 - All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction. The raw water sample tap was observed to have a "T"

		connection shared with a threaded hose bib. There shall be no pathway for contamination into the well casing and/or discharge piping. The threaded hose bib and the "T" configuration shall be removed and the sample tap replaced with a single designated connection. See <b>Attachment #2</b>
--	--	--

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	40 CFR 141.403 and LAC 51:XII.1505.D - An approved chemical laboratory/drinking water shall ensure that records and reports are satisfactorily maintained and retrievable. Copies of records and reports for any off-site approved chemical laboratory/drinking water shall be filed in a folder identifying the public water system by name as well as is public water system identification number (PWS ID #). At the time of the survey the facility could not produce the daily chlorine residual results, bacteriological results, chemical records, lead & copper reports and consumer confidence reports for all of the required time frames that records are required to be kept.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC STORAGE	Finished Water Storage	40 CFR 141.403 and TSS 7.2.4 - Each tank shall have an access manhole, a drain, and control equipment consisting of a pressure gauge, water sight glass, automatic or manual air blow-off, means for adding air, and pressure operated start-stop controls for the pumps. Where practical the access manhole should be 24 inches in diameter. During the inspection, the

		hydropneumatic tank was not equipped with a sight glass or a working pressure gauge.
FACILITY	CATEGORY	FINDINGS
1103081-001 - KTERI APTS WELL	Source	40 CFR 141.403 and TSS 3.2.7.3.a.4 - The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained. At the time of the survey, it was noted that the well did not have a pressure gauge or a flow meter.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is strongly recommended that the water system develop and implement a written flushing program. The water distribution system and storage tanks should be flushed as necessary to reduce stagnant water and sediment build-up. Unidirectional and directional flushing is more effective than spot flushing.
FACILITY	CATEGORY	FINDINGS

Management	Other	It is strongly recommended that the water system establish and maintain a file for consumer complaints. This file should contain the name of the person with the complaint, date, nature of the complaint, date of investigation and results or actions taken to correct any problems.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	40 CFR 141.403 and TSS 2.18 - Consideration must be given to the safety of water plant personnel and visitors. The design must comply with all applicable safety codes and regulations that may include the Uniform Building Code, Uniform Fire Code, National Fire Protection Association Standards, and state and federal OSHA standards. Items to be considered include noise arresters, noise protection, confined space entry, protective equipment and clothing, gas masks, safety showers and eye washes, handrails and guards, warning signs, smoke detectors, toxic gas detectors and fire extinguishers. At the time of the visit, the shed where the water well was located was being used for storage. It is recommended that the area around the water well is free of any possible hazards that may affect the safety of the operator, or any visitors.

**Written Response Required**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	All public water supplies shall be operated and maintained to provide a minimum positive pressure of 15 pounds per square inch gauge at all service connections at all times. At the time of the site visit the jet pump serving the well/system was observed to be running continuously to maintain the large storage tank. Provide documentation to support that the well pump is adequately sized for the demand.
FACILITY	CATEGORY	FINDINGS
1103110-001 - EAGLE LAKE WELL	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. At the time of the site visit one of the collars on the well casing pipe was observed to be leaking/bubbling. The leak could be a pathway for contamination into the well.

**Deficiencies**

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
1103110-001 - EAGLE LAKE WELL	Source	A minimum of two sources of groundwater shall be provided for community water systems.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

Office of Public Health • Southeast Region IX

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	No public water supply shall be hereafter constructed, operated or modified to the extent that the capacity, hydraulic conditions, functioning of treatment processes, or the quality of finished water is affected, without, and except in accordance with the plans and specifications for the installation which have been approved, in advance, as part of a permit submitted by the person having responsible charge of a municipality owned public water supply or by the owner of a privately owned public water supply. The permit shall be issued by the state health officer prior to the start of such construction or modification. The system failed to notify LDH when treatment processes were changed from TMB 460 to DWT 6035 Tetrapotassium Phosphate.

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
TP001 - GREENBRIER WELL	Treatment	Calibration tubes or mass flow monitors which allow for direct physical checking of actual feed rates shall be fitted. At the time of inspection, there was no means available for checking the actual chlorine feed rate.
FACILITY	CATEGORY	FINDINGS

TP001 - GREENBRIER WELL	Treatment	Provisions shall be made for measuring the quantities of chemicals used. NSF Max Use for DWT 6035 Tetrapotassium Pyrophosphate is 29 mg/L. Additionally, proper testing is required to ensure that a total applied phosphate level of 10 mg/L as phosphate (PO <sub>4</sub> ) is not exceeded. Excessive polyphosphate dosage may remove protective pipe scale resulting in colored water, turbidity, suspended solids and/or an increase in corrosion rates. Overfeeding phosphate also increases the nutrient level of the water, and if adequate Cl <sub>2</sub> residual is not maintained in the distribution system, these nutrients may support bacterial growth.
FACILITY	CATEGORY	FINDINGS
TP001 - GREENBRIER WELL	Treatment	Tanks and tank refilling line entry points shall be clearly labeled with the name of the chemical contained. At the time of inspection, the day tank for TMB 460 was not labeled.
FACILITY	CATEGORY	FINDINGS
1103130-002 - WELL @ TARGET	Source	The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained. At the time of inspection, the pressure gauge, equipped at the raw water sample point, did not appear to be functional.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is recommended that the Greenbrier well be inspected by a professional water well contractor, preferably with a downhole camera, and the results maintained by UI and provided to LDH for review. It is also recommended that a well yield test (flow performance test) be performed to identify any potential changes in the water well since original development, including physical plugging of the aquifer, sand pumping, well screen or casing failure, etc. Generally, a decrease of 25% or more in well yield indicates that rehabilitation is in order. Finally, please be advised that adequately developed wells should be sand free.

### **Act No. 292**

ACT No. 292 became effective 08/01/2018 and provides requirements for community water systems with respect to customer complaints and flushing programs. It can be viewed at <http://www.legis.la.gov/legis/ViewDocument.aspx?d=1099847>.

In accordance with the provisions found in ACT No. 292, UI is here-by notified that Greenbrier Water System is required to implement a demonstrated flushing program. A properly designed and implemented flushing program is considered to be a valuable tool to significantly improve water quality and increase the reliability of the water distribution system. The flushing program must be documented and periodically evaluated for effectiveness. Of the various types of flushing programs that can be implemented, a unidirectional flushing (UDF) program is preferred where system design allows. UDF is the strategic closing of valves and opening of hydrants to flush one segment of main in a SINGLE DIRECTION (UDF). Higher velocities (> 5 fps is desirable) scour and remove sediment and deposits from water mains. Within 60 days of receipt of this survey develop and implement a flushing program.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
1103131-001 - WELL #1 @ PEARL PLANTATION	Source	The air release valve was leaking at the time of inspection. The leak shall be repaired as soon as possible. <b>See Attachment #1</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Per the system's operator the chlorine residual was measured and recorded by the manager and his staff on a daily base but the daily chlorine residual records were not available at the time of inspection and were still not available after 10 days of the inspection. Chlorine residuals must be monitored and recorded on the state approved forms daily at the water production (POE) site and a critical point (MRT)--the furthest location in the water system.
FACILITY	CATEGORY	FINDINGS
1103131-001 - WELL #1 @ PEARL PLANTATION	Source	There was no flow meter on the well discharge pipe at the time of inspection. A flow meter is required for the well discharge pipe.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
1103131-001 - WELL #1 @ PEARL PLANTATION	Source	At the time of inspection there was no secondary source of water. A second source is recommended for all community water supplies.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Dear Mr. Mchugh:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 3, 2018 sanitary survey inspection of the public water supply system for H2O SYSTEMS INC - BLEU LAKE HILLS (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

Re: Class I Sanitary Survey  
OAK VILLA TRAILER PARK Public Water System  
PWS ID LA1103152  
ST TAMMANY Parish

Dear Ball:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 23, 2018 sanitary survey inspection of the public water supply system for OAK VILLA TRAILER PARK (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

Office of Public Health • Southeast Region IX

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	During the site visit, it was noted that sample sites indicated on the approved monitoring site plan were either missing or located in a different spot. The monitoring site plan must be updated and maintained per the approved monitoring site plan. The water system is required to have a minimum of 7 sampling sites. A request to return the monitoring plan portal must be made to this office.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, a hose was connected to the distribution system without a hose bib vacuum breaker to prevent cross connection between potable and non-potable water. Refer to LAC 51:XII.343.A See Attachment #1
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, the public water system did not have a formal cross connection program in place. Refer to LAC 51:XII.344

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, records indicated that the water system did not collect chlorine residuals on the weekends. Chlorine residuals are to be recorded every day and kept for a period of three years. Refer to LAC 51:XII.311.A
FACILITY	CATEGORY	FINDINGS
HD001 - HYDRO TANK	Finished Water Storage	At the time of inspection, the exterior surface of the hydropneumatic tank shows some signs of rusting. The condition of the tank interior is unknown. A tank inspection is

		recommended to help pinpoint possible needed repairs.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDRO TANK	Finished Water Storage	At the time of inspection, the hydropneumatic tank lacked a water sight glass and an appropriate manhole.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	40 CFR 141.403 and TSS 5.1.2.d - A means to measure water flow must be provided in order to determine chemical feed rates. A means to measure/confirm disinfection solution usage and dosage calculations was not apparent.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	At the time of inspection, it was noted the sodium hypochlorite was exposed to UV.
FACILITY	CATEGORY	FINDINGS
1103152-001 - TAP AT WELL	Source	40 CFR 141.403 and TSS 3.2.7.3.a.4 - The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained. At the time of the site visit the well did not have a pressure gauge or a means of measuring flow on the discharge line.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
HD001 - HYDRO TANK	Finished Water Storage	At the time of inspection, the bypass piping is not provided around the hydropneumatic tank. The hydropneumatic tank shall have bypass piping to permit operation of the system while the tank is being repaired or painted.
FACILITY	CATEGORY	FINDINGS
1103152-001 - TAP AT WELL	Source	At the time of inspection it was noted that only one source is available. The system does not have a secondary source of water.

Dear Ms. Sandra Johnson:

The Louisiana Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 23, 2018 RTCR Level 2 Assessment of the public water supply system for S and J RV Park. The intent of this assessment, in response to multiple positive total coliform samples in a running 12 month period, is to locate sanitary defects the could infer with the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code.

### RTCR Level 2 Assessment Form

#### I. General Information

PWS Name: S and J RV Park	PWS ID#: 1103175
Contact Name: Steven Johnson	Phone #: 985-788-6536
PWS Address: 56054 Blue Ridge Drive	E-mail: SandraJohnson985@gmail.com
Name of Lead Assessor: Jacob Haffner	Date Completed: 10/23/2018
<b>Level 2 Trigger</b>	<i>E. coli</i> Positive: YES <input checked="" type="checkbox"/> NO <input type="checkbox"/> If yes, which sample(s) from Section II? #1
	2 <sup>nd</sup> Level 1: YES <input type="checkbox"/> NO <input checked="" type="checkbox"/> Date of 1 <sup>st</sup> Level 1:

#### II. Positive Sample Information (Use page 7 to report additional positive monthly samples)

<b>Positive Sample #1:</b>	Sample POC#: A1811871-001	Sample POC Name: TCR-001
Sample Date: 10/17/2018	Name of Sample Collector: K. HAGAN	
Chlorine Residual: Free <input checked="" type="checkbox"/> Total <input type="checkbox"/> Not Measured <input type="checkbox"/>	0.02 mg/L	
Was the sample collected according to the sample siting plan?	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>
Was the condition of the sample tap appropriate for collection?	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>
Were the samples collected in accordance with proper sample collection protocols?	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>

<b>Positive Sample #2:</b>	Sample POC#: A1811997-003	Sample POC Name: TCR-001
Sample Date: 10/18/2018	Name of Sample Collector: K. HAGAN	
Chlorine Residual: Free <input checked="" type="checkbox"/> Total <input type="checkbox"/> Not Measured <input type="checkbox"/>	0.00 mg/L	
Was the sample collected according to the sample siting plan?	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>
Was the condition of the sample tap appropriate for collection?	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>
Were the samples collected in accordance with proper sample collection protocols?	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>

<b>Positive Sample #3:</b>	Sample POC#: A1811997-002	Sample POC Name: REPEAT DOWN
Sample Date: 10/18/2018	Name of Sample Collector: K. HAGAN	
Chlorine Residual: Free <input checked="" type="checkbox"/> Total <input type="checkbox"/> Not Measured <input type="checkbox"/>	mg/L	
Was the sample collected according to the sample siting plan?	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>
Was the condition of the sample tap appropriate for collection?	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>
Were the samples collected in accordance with proper sample collection protocols?	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>

<b>Positive Sample #4:</b>	Sample POC#: A1811997-001	Sample POC Name: REPEAT UPSTREAM
Sample Date: 10/18/2018	Name of Sample Collector: K. HAGAN	
Chlorine Residual: Free <input checked="" type="checkbox"/> Total <input type="checkbox"/> Not Measured <input type="checkbox"/>	mg/L	
Was the sample collected according to the sample siting plan?	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>
Was the condition of the sample tap appropriate for collection?	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>
Were the samples collected in accordance with proper sample collection protocols?	YES <input checked="" type="checkbox"/>	NO <input type="checkbox"/>

#### III. Assessment Questions

# Louisiana Department of Health, Office of Public Health

## Engineering Services – Safe Drinking Water Program

### RTCR Level 2 Assessment Form

#### A. Source – Well

*\*If PWS does not use a well source check here and skip to subsection B ☐*

<b>Which well sources were not used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Was a new source activated?		x		
2. Is the ground graded to prevent surface water flow towards the well?	x			
3. Does the well casing extend at least 18" above the ground?	x			
4. Is the exposed portion of the well casing in good condition?	x			
5. Does the well have a secured sanitary seal well cap?		x		
6. Is the sanitary seal well cap vented and screened?		x		
7. Is there a down turned well vent that is at least 24 inches above the ground surface?		x		
8. Are appropriate backflow prevention devices installed, maintained and tested on all cross connections?		x		
9. Does raw water quality data indicate changes to the source water quality?			x	
10. Has source yield changed?			x	
11. Are there obvious sources of contamination in the vicinity of the well?		x		
12. Was the well pump recently repaired or replaced?	x			
13. Are there signs of vandalism at the well?		x		
14. Have there been any unusual weather events that may have impacted the well?		x		
15. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the well?		x		

**Assessor Name: Jacob Haffner, P.E.**

#### B. Source – Surface Water

*\*If PWS does not use a surface water source check here and skip to subsection C ☒*

<b>Which surface water sources were used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Is the surface water intake screened and maintained?				
2. Is the pump house protected from unauthorized personnel?				
3. Does raw water quality data indicate changes to the source water quality?				
4. Are there obvious sources of contamination within the nearby watershed?				
5. Are there signs of vandalism at the surface water intake?				
6. Have severe weather events such as heavy rainfall, rapid snowmelt, drought, or reservoir turnover occurred?				
7. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the source?				

**Assessor Name:**

#### C. Treatment Processes

# Louisiana Department of Health, Office of Public Health

## Engineering Services – Safe Drinking Water Program

### RTCR Level 2 Assessment Form

Questions:	YES	NO	N/A	Unk.
1. Have there been interruptions in any treatment processes?	x			
2. Has the treatment plant(s) or finished water pump(s) experienced any power interruptions?		x		
3. Has there been any recent installation or repair of treatment equipment?	x			
4. Have there been changes to any treatment processes?		x		
5. Does water quality data indicate inadequate/inappropriate treatment of water?	x			
6. Are all treatment processes operational and maintained?	x			
7. Is there an air gap between treatment instrumentation and waste lines?			x	
8. Were there any failures to meet required CT values?			x	
9. Did treatment plant flow rates exceed the permitted capacity?			x	
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?			x	
11. Did a review of the turbidity data reveal any anomalies?			x	
12. Did a review of chlorine residual data reveal any anomalies or deficiencies?	x			

Assessor Name: Jacob Haffner, P.E.

#### D. Distribution System

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?	x			
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?		x		
3. If samples were collected from inside a building, does the site have additional water treatment installed?		x		
4. Is there evidence that the system experienced low or negative pressure?	x			
5. Was there any scheduled flushing of the distribution system?		x		
6. Are pump stations protected from unauthorized personnel?	x			
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?		x		
8. Are air relief valves maintained and operational without leaks?			x	
9. Are pump stations maintained and equipment operational?	x			
10. Are fire hydrants and blow offs maintained and operational without leaks?			x	
11. Does water quality data collected in the distribution system show results indicative of an issue?	x			
12. Have any water related customer complaints been received?	x			
13. Is there any evidence of intentional contamination in the distribution system?		x		

Assessor Name: Jacob Haffner, P.E.

#### E. Storage Tanks

# Louisiana Department of Health, Office of Public Health

## Engineering Services – Safe Drinking Water Program

### RTCR Level 2 Assessment Form

*\*If no storage tank check here and skip to section IV. ☐*

Questions:	YES	NO	N/A	Unk.
1. Is the pressure tank maintaining an appropriate minimum pressure?	x			
2. Are all vents and overflow pipes screened?			x	
3. Is the tank maintained and free of rust, holes and leaks?		x		
4. Are there any unsealed openings in the storage facility such as access doors, vents or joints?		x		
5. Are signs of vandalism visible?		x		
6. Are roof hatches and manhole openings tightly covered and locked?			x	
7. Do downspouts and overflow pipes drain water away from structure?			x	
8. Have all storage tanks been inspected and cleaned within the last 5 years?		x		
9. Were there any repair activities associated with the storage tanks?		x		

Assessor Name: Jacob Haffner, P.E.

#### F. Water Quality Data Table

Parameter	Number of Each Sample Type Collected		
	Raw (0)	Entry Point (1)	Distribution (2)
Chlorine Residual (mg/L)		0.60 mg/L	0.33 mg/L
Turbidity (NTU)			
Coliform Bacteria			
Other (specify below)			

# Louisiana Department of Health, Office of Public Health

### RTCR Level 2 Assessment Form

#### G. Issue Descriptions and Corrective Actions

(Use page 8 to report additional issues)

\* No issues were found during the assessment: ☐

Issue Description (list section letter and #)	Corrective Action
<b>a. 5.</b> All wells shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, and a means of measuring flow. At the time of inspection, the well did not have a flowmeter installed.	

Issue Description (list section letter and #)	Corrective Action
<b>a. 6.</b> All potable water well casings shall be vented to atmosphere. At the time of inspection, the well did not have a well casing vent.	

Issue Description (list section letter and #)	Corrective Action
<b>a. 8.</b> At the time of inspection a Cross Connection Plan could not be produced. A Cross Connection Plan shall be provided by the water system to the Office of Public Health.	

## Louisiana Department of Health, Office of Public Health

### Engineering Services – Safe Drinking Water Program

#### RTCR Level 2 Assessment Form

Issue Description (list section letter and #)	Corrective Action
<b>c. 5.</b> A free chlorine residual of 0.5 mg/L is required to be maintained throughout the distribution system. At the time of inspection, the free chlorine level in the distribution system was below the 0.5 mg/L threshold.	

Issue Description (list section letter and #)	Corrective Action
<b>c. 6.</b> At the time of inspection the water system did not have a certified operator. All water systems shall have a certified operator either employed or contracted at all times.	

Issue Description (list section letter and #)	Corrective Action
<b>c. 12.</b> Chemicals used in the treatment of water to be used for portable purposes shall either meet the standards of AWWA or NSF. At the time of inspection, the bleach being used for disinfection was not NSF certified.	

# Louisiana Department of Health, Office of Public Health

## Engineering Services – Safe Drinking Water Program

### RTCR Level 2 Assessment Form

Issue Description (list section letter and #)	Corrective Action
<b>d. 4.</b> The distribution system shall be designed to maintain a minimum pressure of 20 psig. At the time of inspection, the pressure tank was reading a pressure of 10 psi.	

Issue Description (list section letter and #)	Corrective Action
<b>e. 8.</b> Storage tanks should be inspected and cleaned every 5 years. At the time of inspection, the storage tank has never been inspected.	

#### H. Verification

Re: Class I Sanitary Survey  
H2O SYSTEMS INC - I59 MOBILE HOME PARK Public Water System  
PWS ID LA1103179  
ST TAMMANY Parish

Dear Ms. Jenkins:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 11, 2018 sanitary survey inspection of the public water supply system for H2O SYSTEMS INC - I59 MOBILE HOME PARK (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	All community water supplies are required to provide records of maintenance and testing of all containment assemblies.

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
1103196-002 - ALEXANDER MILNE HOME FOR WOMEN WELL#2	Source	An operational flow meter is required at the discharge piping from the wells. The flow meter is not operational. <b>See Attachment #1</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

- Exercising of all valves in distribution system should be done consistently to ensure the ability to isolate areas during the case of repairs and/or emergencies.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southeast Region IX

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

No observations were recorded in this category.

**Deficiencies**

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

- Recording of the request for line locations and the purpose (irrigation, swimming pools, etc.) of such request, is an excellent means of determining the requirement for back flow prevention in distribution systems serving residential customers. Please continue this practice

**Written Response Required**

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

Office of Public Health • Southeast Region IX

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
2103166-001 - WELL	Source	40 CFR 141.403 and LAC 51:XII.327.A.15 - All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction. Upon inspection, no raw water sample tap was available for use. A sample tap shall be installed upstream of the discharge line check valve. See <b>Attachment #1</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	40 CFR 141.403 and LCA 51:XII.367.F - Chlorine residuals shall be measured in accordance with the analytical methods set forth in Section 1105.C of this Part. Upon inspection, the chlorine test kit being used was not properly maintained. Actions should be taken to ensure that the methods of testing are as accurate as possible.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	40 CFR 141.403 and LAC 51:XII.357.A - Disinfection equipment shall be operated to maintain disinfectant residuals in each finished water storage tank and at all points throughout the distribution system at all times in accordance with the following minimum levels. 1. a free chlorine residual of 0.5 mg/l, or, 2. a chloramine residual (measured as total

		chlorine) of 0.5 mg/l for those systems that feed ammonia. At the time of the survey, chlorine residual samples were taken at the POE as well as the MRT. Residual values were inconsistent. Adjustments to the treatment process should be made to ensure even and consistent chlorination throughout the system.
FACILITY	CATEGORY	FINDINGS
2103166-001 - WELL	Source	40 CFR 141.403 and TSS 3.2.7.3.a.4 - The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained. Upon inspection, there was no flow meter equipped. A flow meter should be installed after the check valve and before the treatment and storage.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

"An Equal Opportunity Employer"

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	No public water supply shall be hereafter constructed, operated or modified to the extent that the capacity, hydraulic conditions, functioning of treatment processes, or the quality of finished water is affected, without, and except in accordance with the plans and specifications for the installation which have been approved, in advance, as part of a permit submitted by the person having responsible charge of a municipality owned public water supply or by the owner of a privately owned public water supply. The permit shall be issued by the state health officer prior to the start of such construction or modification. At the time of the site visit piping was observed to be providing water to a neighboring establishment prior to chlorination. Records available in this office do not reflect this connection.
FACILITY	CATEGORY	FINDINGS
2103241-001 - VALUE TRAVEL INN WELL	Source	All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction. At the time of the site visit the sample tap provided for the well was threaded.
FACILITY	CATEGORY	FINDINGS
2103241-001 - VALUE TRAVEL INN WELL	Source	Every potable water well, and the immediate appurtenances thereto that comprise the well, shall be located at a safe distance from all possible sources of contamination, including but not limited to, privies, cesspools, septic tanks, subsurface tile systems, sewers, drains, barnyards, and pits below the ground surface. At the time of the site visit the neighboring properties sewer plant was observed to be within 75-80 feet of the well.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	A public water system (PWS) shall measure the residual disinfectant concentration within the distribution system at least once per day. At the time of the site visit the system was recording 0.5 mg/L of free chlorine everyday whereas testing of the water during the site visit reflected readings below 0.5 mg/L. Provide chlorine residual report forms to this office for the months of February, March, and April 2018 by the 10th day of the following month.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	Main switch gear electrical controls shall be located above grade, in areas not subject to flooding. All electrical work shall conform to the requirements of the National Electric code or to relevant state and/or local codes. At the time of the site visit electrical wiring within the well site was not provided with electrical conduit.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Re: Class I Sanitary Survey  
ARBY'S Public Water System  
PWS ID LA2103296  
ST TAMMANY Parish

Dear Mr. Moore:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 31, 2018 sanitary survey inspection of the public water supply system for ARBY'S (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### **Parties Present**

<b>Name</b>	<b>Organization</b>
Angela Gomez	LDH OPH Region 9 Engineering
Rene Peytral	PRJ Contracting, Inc.

### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

**No observations were recorded in this category.**

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
2103296-001 - ARBY'S WELL	Source	At the time of the inspection, it was noted that the well did not have a flow meter. A flow meter should be provided as a means of measuring flow from the well.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

"An Equal Opportunity Employer"

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	At the time of inspection, security was not provided at the well site. All public water supply wells, treatment units, tanks, etc., shall be located inside a 6' fenced area that is capable of being locked. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, a threaded tap was provided at the point of entry (POE). All threaded taps need to be removed or provided with a hose bib vacuum breaker.
FACILITY	CATEGORY	FINDINGS
2103365-001 - CHARLOUS PIZZERIA WELL	Source	At the time of inspection, there was a visible hole in the casing. There shall be no pathway for contamination into the well casing and/or discharge piping. <b>See Attachment #3</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the chlorine residual was being monitored in one location. A public water system (PWS) shall measure the residual disinfectant concentration at the POE and at the MRT at least once per day and at the ACR monthly.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the state form for the ACR was not being used. I have included a copy of Form 3 for your records.
FACILITY	CATEGORY	FINDINGS

Management	M&R and Data Verification	At the time of inspection, the water system did not have reports for daily chlorine residuals on weekend days. Chlorine residual reports shall be collected and maintained daily.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	System Management and Operation	At the time of inspection, the electrical wiring was not properly protected in conduit. All wiring shall be housed in covered junction boxes and properly insulated where subject to water or flooding. See <b>Attachment #1</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the inspection, the sample tap at the point of entry (POE) sprayed everywhere when in operation. All smooth nozzle taps for routine coliform sampling should control the flow of water. The tap is to be replaced with a smooth nozzle type and should be cleaned or re tapped so that adequate flow is achieved.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
HD001 - HYDROPNEUMATIC	Finished Water Storage	At the time of inspection, a water sight glass was not provided at the hydropneumatic tank. Each tank shall have a water sight glass.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 - TREATMENT PLANT	Treatment	At the time of inspection, the chlorine tank was not protected from the sun. All storage containers shall be sited out of the sunlight in a cool area and shall be vented to the outside of the building.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 - TREATMENT PLANT	Treatment	At the time of inspection, the sodium hypochlorite container did not have a receiving basin capable of receiving accidental spills or overflows. Receiving basins should be provided.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>

2103365-001 - CHARLOUS PIZZERIA WELL	Source	At the time of inspection, a flow meter was not provided. The discharge piping shall be equipped with a flow meter as a means to measure flow.
FACILITY	CATEGORY	FINDINGS
2103365-001 - CHARLOUS PIZZERIA WELL	Source	At the time of inspection, an air vent was not provided at the well. All potable water well casings shall be vented to atmosphere.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, the sample tap for raw water showed signs of corrosion. This corrosion can result in leaks if not treated. The water pipes are to be cleaned and treated to prevent further corrosion. See <b>Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	At the time of inspection, housing was not provided at the treatment plant. Adequate housing must be provided for the chlorination equipment and for storing the chlorine.

**Written Response Required**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
2103384-001 - WELL	Source	At the time of inspection, a smooth nozzle sample tap was not provided at the well for the collection of water samples. All potable water supply wells shall be provided with a readily accessible smooth nozzle tap. See <b>Attachment #1</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the chlorine residuals were not produced during the sanitary survey. The chlorine residuals shall be measured at the points of entry (POE) and the maximum residence time (MRT) location every day and recorded on state approved monitoring forms. This daily log shall be kept at a minimum of three years.
FACILITY	CATEGORY	FINDINGS
2103384-001 - WELL	Source	At the time of inspection, the well did not have a flow meter on the discharge line. A means to measure the flow at the well shall be provided.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southeast Region IX  
Attn: Angela Gomez, R.S.

RUSSELLS QUICK STOP Public Water System  
PWS ID LA2103390  
ST TAMMANY Parish

Dear Mrs. Russell:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the January 26, 2018 sanitary survey inspection of the public water supply system for RUSSELLS QUICK STOP (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Jie Gu	LDH Region IX Engineering
Rene Peytral	PRJ Contracting, Inc.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### **Significant Deficiencies**

**No observations were recorded in this category.**

### Deficiencies

FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	There was 1 threaded tap installed downstream the storage tank at the time of inspection. The threaded tap needs to be replaced with smooth-nosed tap.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1	Treatment	There was no secondary containment for the sodium hypochlorite storage at the time of inspection. A receiving basin capable of receiving accidental spills or overflows must be provided.
FACILITY	CATEGORY	FINDINGS
2103390-001 - WELL	Source	There was no flow meter on the well discharge pipe at the time of inspection. A flow meter is required for the well discharge pipe.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	<p>The sodium hypochlorite chemical feed pump is being operated at a feed range of approximately 5%, which is below the minimum feed range requirement of 20 percent. See <b>attachment #1</b>.</p> <p>LAC 51:XII.201.D.7 - Chemical feeders and pumps shall operate at no lower than 20 percent of the feed range unless two fully independent adjustment mechanisms such as pump pulse rate and stroke length are fitted then the pump shall operate at no lower than 10 percent of the rated maximum.</p> <p>LAC 51:XII.319.D.17 - General equipment design shall be such that feeders will be able to supply, at all times, the necessary amounts of chemicals at an accurate rate throughout the range of feed.</p>
FACILITY	CATEGORY	FINDINGS
2103397-001 - PHOENIX ENERGY WELL	Source	<p>The top of the well casing is located below grade, in a manhole, and is covered with concrete. As a result, the integrity of the well's sanitary seal cannot be assessed or assured. See <b>attachment #2</b>.</p> <p>LAC 51:XII.169.H.1.d.ii - Where power pumps are not placed directly over the well, the well casing shall extend at least 12 inches above the floor of the pump house. In flood-prone areas the top of the casing shall extend at least two feet above the 100-year flood elevation, but in no case less than two feet above the ground surface. The annular space between the well casing and the suction pipe shall be closed by a sanitary well seal to prevent the entrance of contamination.</p> <p>LAC 51:XII.319.D.7 - There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and</p>

		discharge piping.
--	--	-------------------

### Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The sodium hypochlorite feed system lacks the ability to directly check actual feed rates.  LAC 51:XII.209.D.2.d - Calibration tubes or mass flow monitors which allow for direct physical checking of actual feed rates shall be fitted.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	There is no secondary containment on the Sodium Hypochlorite storage tank.  LAC 51:XII.203.J.10 - Liquid storage tanks shall be located and secondary containment provided so that chemicals from equipment failure, spillage or accidental drainage shall not enter the water in conduits, treatment or storage basins. Secondary containment volumes shall be able to hold the volume of the largest storage tank. Piping shall be designed to minimize or contain chemical spills in the event of pipe ruptures.
FACILITY	CATEGORY	FINDINGS
2103397-001 - PHOENIX ENERGY WELL	Source	There is no flow meter on the well discharge line.  LAC 51:XII.169.H.3.a.iv. - The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Comments:** A means which is consistent with the nature of the chemical stored shall be provided in a liquid storage tank to maintain the uniform chemical strength. Liquid storage tanks shall be kept covered. Large liquid tanks with access openings shall have such openings curbed and fitted with overhanging covers.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Security	All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked. The fence shall be resistant to climbing and at least 6 feet high. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	A formal cross connection control plan is required. Each water utility shall have a program conforming to state requirements to detect and eliminate cross connections. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. An adopted and signed cross connection control plan shall be provided to this office.
FACILITY	CATEGORY	FINDINGS
2103429-001 - WELL	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. <b>See Attachment #6</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	A public water system (PWS) shall measure the residual disinfectant concentration within the distribution system at least once per day at the POE and MRT. The ACR residual should be taken monthly at a minimum.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	All electrical work shall conform to the requirements of the National Electric code or to relevant state and/or local codes. Electrical wiring needs to be properly protected in conduit where applicable, properly housed in covered junction boxes and properly insulated where subject to water or flooding. In all cases, the electrical wiring must conform to applicable building codes. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	All cisterns and storage tanks shall be of watertight construction and made of concrete, steel or other materials approved for this purpose by the state health officer. When located wholly or partly below ground, such storage basins shall be corrosion resistant materials.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	The area surrounding a ground-level structure shall be graded in a manner that will prevent surface water from standing within 50 feet of it. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	The storage tank shall be equipped with a functioning sight glass and pressure gauge.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	A means which is consistent with the nature of the chemical stored shall be provided in a liquid storage tank to maintain the uniform chemical strength. Liquid storage tanks shall be kept covered. Large liquid tanks with access openings shall have such openings curbed and fitted with overhanging covers. See <b>Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	Chemicals shall be stored in covered or unopened shipping containers, unless the chemical is transferred into an approved storage unit. See <b>Attachment #5</b>
FACILITY	CATEGORY	FINDINGS
2103429-001 - WELL	Source	The well has not been registered with the Louisiana Department of Natural Resources.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Capitol Region II  
Attn: Teresa Benton, R.S.  
P. O. Box 4489, Bin #10, Bienville Bldg.  
Baton Rouge, Louisiana 70821-4489

The following compliance history is provided for your information

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

Lacombe, LA 70445

Re: Class I Sanitary Survey  
THE RESTAURANT Public Water System  
PWS ID LA2103436  
ST TAMMANY Parish

Dear Ms. Brown:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 13, 2018 sanitary survey inspection of the public water supply system for THE RESTAURANT (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

David Entrevista	Entrevia Environmental Services, LLC

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
2103467-001 - J& S FOOD MART WELL	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. The well did not have a casing, seal, nor a slab.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	40 CFR 141.403 and LAC 51:XII.373.A - Portable hoses used for filling water containers shall be provided with a metal disk at the nozzle to prevent contact of nozzle with ground or floors. When not in use, the portable hoses shall be protected from dirt and contamination by storage in a tightly enclosed cabinet and shall have a cap to cover the nozzle. The hose used to add water to the chlorine container was not properly stored.
FACILITY	CATEGORY	FINDINGS
2103467-001 - J& S FOOD MART WELL	Source	40 CFR 141.403 and LAC 51:XII.327.A.11 - All potable water well casings shall be vented to atmosphere as provided in 327.A.12 below, with the exception that no vent will be required when single-pipe jet pumps are used. No well vent was present at the time of the visit.
FACILITY	CATEGORY	FINDINGS
2103467-001 - J& S FOOD MART WELL	Source	40 CFR 141.403 and TSS 3.2.7.3.a.4 - The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained. No raw

		water sample tap was present at the time of the visit.
--	--	--

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

Re: Class I Sanitary Survey  
EXCEL MART # 89 Public Water System  
PWS ID LA2103468  
ST TAMMANY Parish

Dear Mr. Fagan:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the February 22, 2018 sanitary survey inspection of the public water supply system for EXCEL MART # 89 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

**No observations were recorded in this category.**

Office of Public Health • Southeast Region IX

## **Deficiencies**

**No observations were recorded in this category.**

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

## **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

## **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

Office of Public Health • Southeast Region IX

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	40 CFR 141.403 and LAC 51:XII.343.A - There shall be no physical connection between a public water supply and any other water supply which is not of equal sanitary quality and under an equal degree of official supervision. and there shall be no connection or arrangement by which unsafe water may enter a public water supply system. At the time of inspection, there was a threaded tap installed near the point of entry. <b>See Attachment #1</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
ST001 - HYDRPNEUMATIC TANK	Finished Water Storage	40 CFR 141.403 and TSS 7.3.3 - Adequate controls shall be provided to maintain levels in distribution system storage structures. Level indicating devices should be provided at a central location. At the time of inspection, no level indicating device was equipped.
FACILITY	CATEGORY	FINDINGS
2103474-001 - DAIQUIRIS NOW WELL 001	Source	40 CFR 141.403 and TSS 3.2.7.3.a.4 - The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained. At the time of inspection, no shutoff valve, pressure gauge, or flow meter was equipped.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

PWS ID LA2103481  
ST TAMMANY Parish

Dear Mr. Staffen:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 14, 2018 sanitary survey inspection of the public water supply system for FOLGER COFFEE CO-LACOMBE DISTRIB CNTR (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### **Significant Deficiencies**

No observations were recorded in this category.

### **Deficiencies**

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Daily chlorine residual within the distribution system was not measured and recorded daily at the time of inspection. Chlorine residuals must be monitored daily at the water production (POE) site and a critical point (MRT)--the furthest location in the water system. And an additional chlorine residual check must be made monthly at the ACR site.
FACILITY	CATEGORY	FINDINGS
HD001 – Hydropneumatic Tank	Finished Water Storage	There were 2 threaded tap installed upstream and downstream the storage tank. The threaded taps need to be replaced with smooth-nosed taps.
FACILITY	CATEGORY	FINDINGS
2103482-001 - 61700 HWY 434 BUILDING WELL	Source	There was no flow meter on the well discharge pipe at the time of inspection. A flow meter is required for the well discharge pipe.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Re: Class I Sanitary Survey  
HAPPY QUICK STOP Public Water System  
PWS ID LA2103492  
ST TAMMANY Parish

Dear Mr. Crain:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the January 25, 2018 sanitary survey inspection of the public water supply system for HAPPY QUICK STOP (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Jie Gu	Ldh Region IX Engineering
Ricky Dale Crain	Shane's Quick Stop
Tim Mcleod	Operator

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

Office of Public Health • Southeast Region IX

42354 West Club Deluxe Road • Suite 13 • Hammond, Louisiana 70403

"An Equal Opportunity Employer"

### Significant Deficiencies

No observations were recorded in this category.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	There was no secondary containment for the sodium hypochlorite storage at the time of inspection. A receiving basin capable of receiving accidental spills or overflows must be provided.
FACILITY	CATEGORY	FINDINGS
2103492-001 - WELL AT SHANES QUICK STOP	Source	There was no flow meter on the well discharge pipe at the time of inspection. A flow meter is required for the well discharge pipe.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

There was no significant deficiency found during the site visit. The required minimum chlorine residual (0.5ppm) can be reached system wide at the time of inspection. However, low chlorine residuals were reported several times in the past year. It is recommended that the operator be familiar with dosage calculation and set an appropriate chemical feeding rate to maintain constant chlorine residual which meets the state's requirement.

### Written Response Required

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
TABIS HOUSE Public Water System  
PWS ID LA2103494  
ST TAMMANY Parish

Dear Mrs. Perilloux:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 3, 2018 sanitary survey inspection of the public water supply system for TABIS HOUSE (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Angela Gomez	LDH OPH Region 9 Engineering
David Entrevia	Entrevia Environmental Services
Tabitha Perilloux	Tabis House

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

"An Equal Opportunity Employer"

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of inspection, the check valve was leaking. Repair or replace the check valve. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
Management	Security	At the time of inspection, the fence was not equipped with a lock. All wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
2103494-001 - JUST FOR KIDS ACADEMY WELL	Source	At the time of inspection, there was a threaded tap at the POE. Remove all threaded taps or provide a hose bib vacuum breaker. <b>See Attachment #5</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the owner recorded the MRT on the wrong form. Chlorine residuals shall be kept and retained on forms approved by the state health officer.
FACILITY	CATEGORY	FINDINGS
2103494-001 - JUST FOR KIDS ACADEMY WELL	Source	At the time of inspection, a flow meter and a pressure gauge was not provided on the discharge piping. Provide a flow meter and a pressure gauge.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	A formal cross connection control plan is required. Each water utility shall have a program conforming to state requirements to detect and eliminate cross connections. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. An adopted and signed cross connection control plan shall be provided to this office.
FACILITY	CATEGORY	FINDINGS
2103502-001 - WELL	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. <b>See Attachment #1</b>

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	40 CFR 141.403 and LAC 51:XII.377.A.1 - Records of microbiological analyses and turbidity analyses made pursuant to this part shall be kept for not less than 5 years. Records of chemical analyses made pursuant to this part shall be kept for not less than 10 years. 40CFR 141.33(a).
FACILITY	CATEGORY	FINDINGS
ST001 - STORAGE	Finished Water Storage	40 CFR 141.403 and TSS 7.0.16 - The area surrounding a ground-level structure shall be graded in a manner that will prevent surface water from standing within 50 feet of it. <b>See Attachment #2</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	40 CFR 141.403 and TSS 4.3.6 - Adequate housing must be provided for the chlorination equipment and for storing the chlorine (See Part 5). <b>See Attachment #3</b>

### **Written Response Required**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, a monitoring plan was not provided. System shall have a monitoring plan that includes a list of all routine compliance samples required on a daily, weekly, monthly, quarterly, and annual basis and identify the sampling location where samples are to be collected.
FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	At the time of inspection, A certified operator was not present. All public water supplies shall be under the supervision and control of a duly certified operator as per requirements of the State Operator Certification Act, Act 538 of 1972, as amended.
FACILITY	CATEGORY	FINDINGS
Management	Security	At the time of inspection, the fence was not locked. All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	At the time of inspection, records/permits were not provided.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, no backflow devices were provided on threaded taps. There shall be no physical connection between a public water supply and any other water supply which is not of equal sanitary quality and under an equal degree of official supervision. And there shall be no connection or arrangement by which unsafe water may enter a public water supply system.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	At the time of inspection, a chemical feed pump was not provided. General equipment design shall be such that feeders will be able to supply, at all times, the necessary amounts of chemicals at an accurate rate throughout the range of feed. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	At the time of inspection, an approved disinfectant was not being used. Chemicals used in the treatment of water to be used for potable purposes shall either meet the standards of the American Water Works Association or meet the guidelines for potable water applications established by the U.S. Environmental Protection Agency.
FACILITY	CATEGORY	FINDINGS
2103531-001 - PETRO PLUS WELL	Source	All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction. <b>See Attachment #3</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The owner of each well shall retain all records pertaining to each well, until the well has been properly abandoned.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

**The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southeast Region IX  
Attn: Angela Gomez, R.S.  
42354 Deluxe Plaza, Suite 13  
Hammond, Louisiana 70403

The following compliance history is provided for your information

### **Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

### **Violation History**

Monitoring Violations during the past year

Violation Number	Violation Date	Analyte	Compliance Period
3	10/02/2018	CHLORINE	09/01/2018 - 09/30/2018
2	10/02/2018	REVISED TOTAL COLIFORM RULE (RTCR)	09/01/2018 - 09/30/2018

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

Violation Number	Violation Date	Violation Type	Compliance Period
4	10/24/2018	INADEQUATE MIN CHLORINE RESIDUAL(GW&SW)	10/01/2018 - 10/31/2018
1	09/05/2018	INADEQUATE MIN CHLORINE RESIDUAL(GW&SW)	08/01/2018 - 08/31/2018

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 985-543-4954.

Respectfully,

Angela Gomez, R.S.

Re: Class I Sanitary Survey  
DA CRAB TRAP Public Water System  
PWS ID LA2103532  
ST TAMMANY Parish

Dear Mr. Karnan:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the November 20, 2018 sanitary survey inspection of the public water supply system for DA CRAB TRAP (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

George A. Karnan	Da Crab Trap

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of inspection, it was noted that a leak was present at the flow meter. All potable water systems shall be designed, constructed and maintained so as to prevent leakage of water due to defective materials, improper jointing, corrosion, settling, impacts, freezing, or other causes.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, a hose was connected to the public water supply. There shall be no connection or arrangement by which unsafe water may enter a public water supply system. Attach hose bib vacuum breakers to all threaded taps in the distribution. <b>See Attachment #2</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, an ACR sampling point was not provided. Refer to 40 CFR 141.403 and LAC 51:XII.903.A.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, it was noted that threaded taps were provided at the MRT sampling site. Replace all sampling taps with smooth nozzle. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
TP001 - DA CRAB TRAP TP	Treatment	At the time of inspection, the owner was not operating the colorimeter correctly and was not recording the correct free chlorine residual. Refer to 40 CFR 141.403 and LAC 51:XII.357.A.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

Office of Public Health • Southeast Region IX

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of inspection, a leak was noticed on the distribution system. All potable water systems shall be designed, constructed and maintained so as to prevent leakage of water due to defective materials, improper jointing, corrosion, settling, impacts, freezing, or other causes <b>See Attachment #7</b>

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the chlorine residuals were not being measured on the correct setting on the colorimeter.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, there are threaded faucets on the towers and out in the distribution without the required backflow prevention device. Install vacuum breakers to all threaded taps or simply remove them. <b>See Attachment #2, #4 and #3</b>
FACILITY	CATEGORY	FINDINGS
1105003-003 - WELL C SWEETWATER	Source	At the time of inspection, an air release-vacuum relief valve was not provided. <b>See Attachment #1</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP003 - WELL C SWEETWATER	Treatment	At the time of inspection, a bottle of concentrated ammonium hydroxide was not provided. A bottle of concentrated ammonium hydroxide (56 per cent ammonia solution) shall be available for chlorine leak detection.
FACILITY	CATEGORY	FINDINGS
TP006 - WELL F HWY 16 & AIRPORT RD	Treatment	At the time of inspection, a bottle of concentrated ammonium hydroxide was not provided. A bottle of concentrated ammonium hydroxide (56 per cent ammonia solution) shall be available for chlorine leak detection.
FACILITY	CATEGORY	FINDINGS
TP006 - WELL F HWY 16 & AIRPORT RD	Treatment	At the time of inspection, all cylinders were stored together. Full and empty cylinders of chlorine gas should be isolated from operating areas. See <b>Attachment #6</b>
FACILITY	CATEGORY	FINDINGS
TP003 - WELL C SWEETWATER	Treatment	At the time of inspection, all full and empty cylinders were stored together. Refer to 40 CFR 141.403 and TSS 5.4.1.b. See <b>Attachment #5</b>
FACILITY	CATEGORY	FINDINGS
TP003 - WELL C SWEETWATER	Treatment	At the time of inspection, scales were not provided.

Tangipahoa Parish

Dear Mr. Charles Schlicher:

The Louisiana Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 22, 2018 RTCR Level 2 Assessment of the public water supply system for Tangipahoa Parish Water District. The intent of this assessment, in response to multiple positive total coliform samples in a running 12 month period, is to locate sanitary defects the could infer with the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code.

**Parties Present**

<b>Name</b>	<b>Organization</b>
Jacob Haffner	OPH-District II Engineering
Ryan Farlow	OPH-Region II Engineering
Charles Schlicher	Tangipahoa Parish Water District
Jason Jefcoat	Tangipahoa Parish Water District
Scott Roth	Tangipahoa Parish Water District

The RTCR Level 2 Assessment form is enclosed with this letter. Please review the findings of the assessment report. The sanitary defects listed in the table, starting on page 4 of the RTCR Level 2 Assessment Form titled "Issue Descriptions and Corrective Actions" must be corrected and a written response submitted to the department. The response is due on July 18, 2016. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these sanitary defects, then the written response must also contain a request with specific dates when the sanitary defects will be corrected.

### III. Assessment Questions

#### A. Source – Well

*\*If PWS does not use a well source check here and skip to subsection B ☐*

Which well sources were not used during the monitoring period?	YES	NO	N/A	Unk.
<b>Questions:</b>				
1. Was a new source activated?		x		
2. Is the ground graded to prevent surface water flow towards the well?	x			
3. Does the well casing extend at least 18" above the ground?	x			
4. Is the exposed portion of the well casing in good condition?	x			
5. Does the well have a secured sanitary seal well cap?	x			
6. Is the sanitary seal well cap vented and screened?		x		
7. Is there a down turned well vent that is at least 24 inches above the ground surface?	x			
8. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?				x
9. Does raw water quality data indicate changes to the source water quality?		x		
10. Has source yield changed?		x		
11. Are there obvious sources of contamination in the vicinity of the well?		x		
12. Was the well pump recently repaired or replaced?		x		
13. Are there signs of vandalism at the well?		x		
14. Have there been any unusual weather events that may have impacted the well?		x		
15. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the well?		x		

**Assessor Name: Jacob Haffner, District II Engineer**

#### B. Source – Surface Water

*\*If PWS does not use a surface water source check here and skip to subsection C X*

Which surface water sources were used during the monitoring period?	YES	NO	N/A	Unk.
<b>Questions:</b>				
1. Is the surface water intake screened and maintained?				

# Louisiana Department of Health, Office of Public Health

## Engineering Services – Safe Drinking Water Program

### RTCR Level 2 Assessment Form

2. Is the pump house protected from unauthorized personnel?				
3. Does raw water quality data indicate changes to the source water quality?				
4. Are there obvious sources of contamination within the nearby watershed?				
5. Are there signs of vandalism at the surface water intake?				
6. Have severe weather events such as heavy rainfall, rapid snowmelt, drought, or reservoir turnover occurred?				
7. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the source?				

Assessor Name:

#### C. Treatment Processes

Questions:	YES	NO	N/A	Unk.
1. Have there been interruptions in any treatment processes?		x		
2. Has the treatment plant(s) or finished water pump(s) experienced any power interruptions?		x		
3. Has there been any recent installation or repair of treatment equipment?	x			
4. Have there been changes to any treatment processes?		x		
5. Does water quality data indicate inadequate/inappropriate treatment of water?		x		
6. Are all treatment processes operational and maintained?	x			
7. Is there an air gap between treatment instrumentation and waste lines?	x			
8. Were there any failures to meet required CT values?		x		
9. Did treatment plant flow rates exceed the permitted capacity?		x		
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?			x	
11. Did a review of the turbidity data reveal any anomalies?			x	
12. Did a review of chlorine residual data reveal any anomalies or deficiencies? (Field checks at the plant reveal possible issues with chloramination process.)	x			
13. Is there a problem with the overall condition of any items in the treatment process?		x		

Assessor Name: Jacob Haffner, District II Engineer

#### D. Distribution System

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?	x			
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?			x	

# Louisiana Department of Health, Office of Public Health

## Engineering Services – Safe Drinking Water Program

### RTCR Level 2 Assessment Form

3. If samples were collected from inside a building, does the site have additional water treatment installed?			x	
4. Is there evidence that the system experienced low or negative pressure?		x		
5. Was there any scheduled flushing of the distribution system?	x			
6. Are pump stations protected from unauthorized personnel?		x		
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?			x	
8. Are air relief valves maintained and operational without leaks?	x			
9. Are pump stations maintained and equipment operational?	x			
10. Are fire hydrants and blow offs maintained and operational without leaks?	x			
11. Does water quality data collected in the distribution system show results indicative of an issue?	x			
12. Have any water related customer complaints been received?	x			
13. Is there any evidence of intentional contamination in the distribution system?		x		

**Assessor Name: Jacob Haffner, District II Engineer**

#### E. Storage Tanks

*\*If no storage tank check here and skip to section IV. ☐*

Questions:	YES	NO	N/A	Unk.
1. Is the pressure tank maintaining an appropriate minimum pressure?	x			
2. Are all vents and overflow pipes screened?	x			
3. Is the tank maintained and free of rust, holes and leaks?	x			
4. Are there any unsealed openings in the storage facility such as access doors, vents or joints?		x

## Engineering Services – Safe Drinking Water Program

### RTCR Level 2 Assessment Form

#### IV. Water Quality Data Table

Parameter	Number of Each Sample Type Collected		
	Raw	Entry Point	Distribution
Chlorine Residual (mg/L)	2	2	2
Turbidity (NTU)			
Coliform Bacteria			
Other (specify below)			

#### V. Issue Descriptions and Corrective Actions (Use page 7 to report additional issues)

\* No issues were found during the assessment: ☐

Issue Description (list section letter and #)	Corrective Action
A. 6. & D. 7. At the time of inspection all well vents and air release valves were screened with what appeared to be plastic caps with holes drilled in them.	The operator shall install #24 inch mesh screen over all well vents and air release valves.

Issue Description (list section letter and #)	Corrective Action
A. 8. At the time of inspection the operator was not able to provide a formal Cross Connection Plan.	The operator shall provide a Cross Connection plan shall include: 1. A signed copy of the CCC Ordinance. 2. A list of customers with backflow preventers. 3. Records of backflow preventer testing results. 4. A list of certified plumbers.

# Louisiana Department of Health, Office of Public Health

## Engineering Services – Safe Drinking Water Program

### RTCR Level 2 Assessment Form

Issue Description (list section letter and #) C. 12. & D. 11.	Corrective Action
At the time of inspection, sample tap TCR-031 had a Total Chlorine reading of 0.7 mg/L and there was a reading of 0.23 mg/L Nitrite.	These readings indicate that nitrification within the distribution system may be taking place. The PWS shall update their nitrification plan and submit a copy to this office. Also, a copy of the nitrification plan shall be kept at the PWS's main office.

Issue Description (list section letter and #) D. 1.	Corrective Action
At the time of inspection there was construction occurring on West Club Deluxe Road and the operator informed us that a line break had occurred.	Continue to work with the contractors to ensure that line breaks and new sections of line that are added to the distribution system are repaired and installed properly.

Issue Description (list section letter and #) D. 5. & D. 11.	Corrective Action
During this Level 2 assessment the inspection team attempted to trace the source and cause of contamination in the distribution system. The operator informed the OPH that water within the distribution system may change direction from time to time and water direction can be deduced from water quality testing results. The operator also informed OPH that a flushing program was in place and was initiated when testing indicated it to be necessary.	It is recommended that the PWS submit a unidirectional flushing program to the Office of Public Health that includes regular scheduling of flushing within the distribution system. Flushing when water testing results indicate an issue should still be instituted.

Issue Description (list section letter and #) D. 6.	Corrective Action
At the Demarco well, there was a large hole in the fencing around the well site.	Repair the fence.

**Louisiana Department of Health, Office of Public Health****Engineering Services – Safe Drinking Water Program****RTCR Level 2 Assessment Form**

Issue Description (list section letter and #)	Corrective Action
<b>E. 8.</b> At the time of inspection the operator informed the OPH that it had been more than 5 years since the water tanks at the Demarco and Dutch well sites had been inspected.	Submit to the OPH a schedule of when all water tanks within the distribution system will be inspected. All water tanks shall be inspected every 5 years.

**VI. Verification**

I hereby certify that the information contained herein is true and correct to the best of my knowledge, information and belief.

Re: Class I Sanitary Survey  
TANGIPAHOA PARISH WATER DISTRICT Public Water System  
PWS ID LA1105008  
TANGIPAHOA Parish

Dear Mr. Schlicher:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 22, 2018 sanitary survey inspection of the public water supply system for TANGIPAHOA PARISH WATER DISTRICT (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

Name	Organization
Michael Cuellar	LDH Engineering Region Ix
Ryan Farlow	LDH Engineering District II
Jacob Haffner	LDH Engineering District II
Charles E Schlicher	Tangipahoa Water District

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1105008-014 - DEMARCO WELL (1996)	Source	At the time of inspection, the raw water sample tap was located on a T connection which was shared with a threaded tap. All potable water supply wells shall be provided with a readily accessible smooth nozzle faucet or tap on the well discharge line for the collection of water samples. The tap shall be upstream of the well discharge line check valve. The water system shall remove the T connection and provide a dedicated connection for the raw water sample tap.
FACILITY	CATEGORY	FINDINGS
1105008-022 - NARRETTA WELL	Source	During the inspection, the sanitary seal on the Narretta Well was leaking. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. The water system shall replace the sanitary seal on the on the Narretta Well. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
1105008-004 - NORTH BAPTIST WELL	Source	The well vent on the North Baptist Well was not 24 inches above the well slab and was not turned down. The water system shall install a well vent that is at least 24 inches above the slab of the well. <b>See Attachment #2</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of inspection, it was apparent that elevated storage tank maintenance for Tangipahoa Water was behind schedule for most of the water system. Please submit a plan to the OPH that includes a timeline for all storage tanks indicating the last time each tank was inspected and the next scheduled maintenance.
FACILITY	CATEGORY	FINDINGS
HD006 - WOODHAVEN HYDROPNEUMATIC	Finished Water Storage	At the time of inspection, the Woodhaven Hydropneumatic Tank did not have a water sight glass. Each tank shall have an access manhole, a drain, and control equipment consisting of a pressure gauge, water sight glass, automatic or manual air blow-off, means for adding air, and pressure operated start-stop controls for the pumps.
FACILITY	CATEGORY	FINDINGS
TP019 - BEDICO TREATMENT PLANT	Treatment	The phosphate chemicals used at the Bedico Well Treatment Plant were left in the elements. The water system shall provide a covered storage area for the phosphate chemicals at this site. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
TP016 - BOOKER WELL TP	Treatment	The phosphate chemicals used at the Booker Well Treatment Plant were left in the elements. The water system shall provide a covered storage area for the phosphate chemicals at this site. <b>See Attachment #6</b>
FACILITY	CATEGORY	FINDINGS
TP017 - THORN LANE WELL TP	Treatment	The phosphate chemicals used at the Thorn Well Treatment Plant were left in the elements. The water system shall provide a covered storage area for the phosphate chemicals at this site. <b>See Attachment #8</b>

FACILITY	CATEGORY	FINDINGS
TP018 - WALMART WELL TP	Treatment	The phosphate chemicals used at the Walmart Well Treatment Plant were left in the elements. The water system shall provide a covered storage area for the phosphate chemicals at this site. <b>See Attachment #5</b>
FACILITY	CATEGORY	FINDINGS
TP013 - WOODHAVEN WELL TP	Treatment	The phosphate chemicals used at the Woodhaven Well Treatment Plant were left in the elements. The water system shall provide a covered storage area for the phosphate chemicals at this site.
FACILITY	CATEGORY	FINDINGS
1105008-016 - BOOKER WELL	Source	During the inspection, the Booker Wells check valve on the discharge pipe was in a state of disrepair. Each well is required to have a working check valve upstream of the disinfection point. Fix or replace the check valve at the Booker Well. <b>See Attachment #7</b>
FACILITY	CATEGORY	FINDINGS
1105008-004 - NORTH BAPTIST WELL	Source	The seal on the casing at the North Baptist Well was not 12 inches above the slab of the well. Permanent casing for all groundwater sources shall project at least 12 inches above the pump house floor or concrete apron surface. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
1105008-013 - WOODHAVEN WELL	Source	The well at the Woodhaven site did not have a well vent. All potable water well casings shall be vented to atmosphere. The water system shall install a well vent on the Woodhaven Well that is in compliance with LAC 51:XII.327.A.11.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and

include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### **Significant Deficiencies**

**No observations were recorded in this category.**

### **Deficiencies**

**No observations were recorded in this category.**

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

It was noticed during the survey that the City of Hammond adopted ordinance on June 16, 2015 to provide cross connection control. The system started performing cross connection survey since then and customers that have backflow devices in place were required to submit field-testing report of their backflow preventers annually; however, there may be some customers who have potential cross connections but do not have proper backflow prevention devices in place. It is recommended that the system should finish the cross connection survey as soon as possible to identify a full list of customers that are required to have backflow prevention devices. Please notify this office when the survey is completed.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	At the time of inspection, the overflow piping on the elevated storage at the 7th street well was located outside the fence. All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked. See <b>Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, the water system was unable to provide evidence that containment practices and maintenance/field testing requirements are being achieved. Provide a list of all customers required to provide backflow prevention devices and indicate the type of backflow prevention device provided. Refer to 40 CFR 141.403 and LAC 51:XII.344)
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	At the time of inspection, the overflow piping on the elevated storage at the 7th street well was not constructed to prevent the entrance of birds, insects, dust or other contaminating material. Also, openings or vents shall face downward and shall be not less than 2 feet above the ground surface. The overflow must discharge onto a splash pad and must be screened with a four inch mesh, non-corrodible screen. If a flapper is used, a screen shall be provided inside the valve. <b>See Attachment #1</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, records of microbiological analyses made pursuant to this part shall be kept for not less than 5 years. Records of chemical analyses made pursuant to this part shall be kept for not less than 10 years. Locate and maintain records for filing. Records of bacteriological data, chemical data, TTHM data, Lead and Copper, HAA5 data, and Consumer Confidence reports. A copy of Louisiana State Sanitary Code Chapter 12, (which can be obtained online at <a href="http://www.la.gov">www.la.gov</a> ).
FACILITY	CATEGORY	FINDINGS
TP001 - INDEPENDENCE TP WELL 1	Treatment	Weighing scales are not provided at the 7th street Well. Weighing Scales are to be used to determine the amount of chlorine remaining in the cylinders. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
TP002 - TREATMENT FOR WELL #2	Treatment	Weighing scales are not provided at the Industrial Park Well. Weighing Scales are to be used to determine the amount of chlorine remaining in the cylinders.
FACILITY	CATEGORY	FINDINGS
1105012-001 - NO.1 SEVENTH ST WELL	Source	At the time of inspection, The mesh screen on the air relief valve was not covered with a 24 mesh corrosion resistant screen. The vent shall be screened with a 24 mesh. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
1105012-002 - NO. 2 INDUST. PARK WELL	Source	At the time of inspection, The mesh screen on the air relief valve was not covered with a 24 mesh corrosion resistant screen. The vent shall be screened with a 24 mesh.

FACILITY	CATEGORY	FINDINGS
1105012-001 - NO.1 SEVENTH ST WELL	Source	During the survey, there was a threaded tap present at the facility that lacked a vacuum breaker. Install a hose bib vacuum breaker on the threaded tap or remove the threaded tap. <b>See Attachment #5</b>
FACILITY	CATEGORY	FINDINGS
1105012-002 - NO. 2 INDUST. PARK WELL	Source	During the Survey, there was a threaded tap present at the facility that lacked a vacuum breaker. Install a hose bib vacuum breaker on the threaded tap or remove the threaded tap.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP002 - TREATMENT FOR WELL #2	Treatment	A bottle of concentrated ammonia hydroxide was not available at Well # 2. A bottle of concentrated ammonia hydroxide (56 % ammonia solution) shall be available for chlorine leak detection.
FACILITY	CATEGORY	FINDINGS
TP001 - INDEPENDENCE TP WELL 1	Treatment	A bottle of concentrated ammonia hydroxide was not available at Well #1. A bottle of concentrated ammonia hydroxide (56 % ammonia solution) shall be available for chlorine leak detection.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Dear Mr. Seller:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the September 13, 2018 sanitary survey inspection of the public water supply system for KENTWOOD WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

Office of Public Health • Southeast Region IX

### Unresolved Observations

No unresolved observations were recorded in this category.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The operator detected a leak from the elevated tower and the system started the process of repair. The leak shall be repaired as soon as possible. See <b>Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system did not have a written cross-connection control program at the time of inspection. The water system shall develop a formal cross-connection control program to protect the water system from potential contamination.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED #1	Finished Water Storage	A required four mesh non-corrodible screen was not observed behind the flapper valve on the overflow of the elevated storage tank at the time of inspection. The required screen shall be provided inside the flapper valve. See <b>Attachment #4 and #2</b>
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED #1	Finished Water Storage	The sample tap on the elevated water storage was threaded type at the time of inspection. Smooth-nosed sampling tap(s) shall be provided to facilitate collection of water samples for both bacteriological and chemical analyses.
FACILITY	CATEGORY	FINDINGS
TP001 - KENTWOOD TP	Treatment	Previous caustic spill was found in the storage house. The spills must be cleaned as soon as possible. Solution tanks shall be located and protective curbing provided so that chemicals from equipment failure, spillage or accidental drainage shall not enter the water in conduits, treatment or storage basins. See <b>Attachment #3</b>

FACILITY	CATEGORY	FINDINGS
1105014-003 - WELL C AVE I WEST END OF HILL	Source	Rust was noticed on the metal portions of the well discharging pipes at the time of inspection. Please repair. See <b>Attachment #6</b>
FACILITY	CATEGORY	FINDINGS
1105014-002 - WELL B AVE I ON HILL BY I-55	Source	Rust was noticed on the metal portions of the well discharging pipes at the time of inspection. Please repair. See <b>Attachment #5</b>
FACILITY	CATEGORY	FINDINGS
1105014-002 - WELL B AVE I ON HILL BY I-55	Source	There was no flow meter on the well discharge pipe at the time of inspection and the pressure gauge was not functioning at the time of inspection. A flow meter and a working pressure gage are required for the well discharge piping.
FACILITY	CATEGORY	FINDINGS
1105014-003 - WELL C AVE I WEST END OF HILL	Source	There was no flow meter on the well discharge pipe at the time of inspection. A flow meter is required for the well discharge pipe.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - KENTWOOD TP	Treatment	At the time of inspection, there were no scales provided for gaseous chlorine cylinders. Weighing scales are recommended to be provided for weighing cylinders at all plants

		utilizing chlorine gas.
FACILITY	CATEGORY	FINDINGS
TP001 - KENTWOOD TP	Treatment	At the time of the inspection, the chlorine building did not have a functioning light or fan. Repair or replace light and fan at chlorine building.
FACILITY	CATEGORY	FINDINGS
TP002 - AVE. D TREATMENT PLANT	Treatment	Phosphate solution was not kept in a covered area at the time of inspection. Stock phosphate solution must be kept covered.
FACILITY	CATEGORY	FINDINGS
TP001 - KENTWOOD TP	Treatment	Phosphate solution was not kept in a covered area at the time of inspection. Stock phosphate solution must be kept covered.

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	There was no standby power supply was available at the time of inspection. Per LAC51:XII.135.A - Dedicated Standby power shall be provided by any community water supply and any non-community water supply serving a hospital so that water may be treated and/or pumped to the distribution system during outages to meet the average daily demand during the month of maximum water use. To ensure continuous service when the primary power has been interrupted, a standby power supply shall be provided through connection to at least two independent public power sources, or portable or in-place auxiliary power.

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	At the time of inspection, there was no access hatch on the hydropneumatic tank. Finished water storage structures shall be designed with reasonably convenient access to the interior for cleaning and maintenance. <b>Attachment #1</b>

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

Though sight glass is not mandatory when an automated control to maintain the proper water to air ratio in the tank is provided, it is still recommended to keep the sight glass in a working condition so that water level can be easily monitored. It is noted that the water system is practicing flushing activities from time to time; however, the flushing activities were not documented. It is strongly recommended that the water system develop a regular flushing program and implement accordingly.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

<b>Comments:</b> Secondary containment is required for liquid disinfectant storage.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
01/24/2012	01/27/2012	Sanitary Survey, Finished	Minor	Source	1105045-001-BAYWOOD ESTATES WELL
<b>Comments:</b> At least two sources of groundwater are not provided. At least two sources of groundwater must be provided. The total developed groundwater source capacity, unless otherwise specified by the reviewing authority, shall equal or exceed the design maximum day demand with the largest producing well out of service, as per TSS 3.2.1.1. A backup or emergency connection to another approved public water supply may suffice as a second source of water provided that source can meet demand as per TSS 3.2.1.1. All sources of water must be approved by the LA Dept. of Health and Hospitals.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	At the time of inspection, a certified operator was not available. All public water supplies shall be under the supervision and control of a duly certified operator as per requirements of the State Operator Certification Act, Act 538 of 1972, as amended.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	At the time of inspection, standby power was not provided. Dedicated Standby power shall be provided by any community water supply to

		ensure continuous service when the primary power has been interrupted. Refer to 40 CFR 141.403 and LAC51:XII.135.A
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, a cross connection plan was not provided. Refer to 40 CFR 141.403 and LAC 51:XII.344 - each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1105045-001 - BAYWOOD ESTATES WELL	Source	At the time of inspection, Baywood Estates purchases water from Tangipahoa Water System. This system has only one source of water. All community water systems are required to have at least two sources of water.

## Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	At the time of inspection, electrical wires were exposed and not in conduit. All electrical work shall conform to the requirements of the National Electric code or to relevant state and/or local codes.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southeast Region IX  
Attn: Angela Gomez, R.S.  
42354 Deluxe Plaza, Suite 13  
Hammond, Louisiana 70403

The following compliance history is provided for your information

#### **Bacteriological Sampling History**

##### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 985-543-4954.

Respectfully,

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of inspection, Two leaks were observed on the distribution line at Hwy 38 well and at Lewiston #2 well. All potable water systems shall be designed, constructed and maintained so as to prevent leakage of water due to defective materials, improper jointing, corrosion, settling, impacts, freezing, or other causes. <b>See Attachment #6 and #5</b>
FACILITY	CATEGORY	FINDINGS
Management	Security	At the time of inspection, a section of the fence surrounding Lewiston well #1 was in disrepair. All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	At the time of inspection, a generator was not provided at Lewiston Well # 2. To ensure continuous service when the primary power has been interrupted, dedicated standby power shall be provided by any community water supply and shall be provided through connection to at least two independent public power sources, or portable or in-place auxiliary power.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, it was noted that state forms were not being used to record daily chlorine residuals. Chlorine residuals shall be recorded on LDH state forms and held for three years. Forms can be located at <a href="http://www.dhh.la.gov/index.cfm/page/1725">http://www.dhh.la.gov/index.cfm/page/1725</a> .
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, A threaded tap was provided at the tower. All threaded taps shall have a hose bib vacuum breaker to prevent any chance of contamination. See <b>Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	At the time of inspection, the elevated tower overflow was not provided with a screen. The screen shall be installed within the overflow pipe at a location least susceptible to damage by vandalism. If a flapper is used, a screen shall be provided inside the valve.
FACILITY	CATEGORY	FINDINGS
EL002 - ARCOLE WELL SITE	Finished Water Storage	At the time of inspection, the elevated tower overflow was not provided with a screen. The screen shall be installed within the overflow pipe at a location least susceptible to damage by vandalism. If a flapper is used, a screen shall be provided inside the valve.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL NO 1 HWY 38	Treatment	At the time of inspection, automatic chlorination switch-over was not observed. To assure continuous disinfection, automatic switch-over should be provided.
FACILITY	CATEGORY	FINDINGS
TP002 - WELL NO.2 NORTH LEWISTON RD	Treatment	At the time of inspection, automatic chlorination switch-over was not observed. To assure continuous disinfection, automatic switch-over should be provided.
FACILITY	CATEGORY	FINDINGS
TP003 - ARCOLA TREATMENT PLANT	Treatment	At the time of inspection, automatic chlorination switch-over was not observed. To assure continuous disinfection, automatic switch-over should be provided.
FACILITY	CATEGORY	FINDINGS
TP004 - SANDERS WELL TREATMENT PLANT	Treatment	At the time of inspection, the day tank for the caustic soda was not provided with a label.
FACILITY	CATEGORY	FINDINGS

TP003 - ARCOLA TREATMENT PLANT	Treatment	At the time of inspection, the TMB day tank was not provided with a label. All tanks shall be clearly labeled with the name of the chemical contained.
FACILITY	CATEGORY	FINDINGS
TP002 - WELL NO.2 NORTH LEWISTON RD	Treatment	At the time of inspection, the ventilating fan was not working. Where chlorine gas is used, the room shall have a ventilating fan with capacity which provides one complete air change per minute when the room is occupied.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP003 - ARCOLA TREATMENT PLANT	Treatment	At the time of inspection, scales for weighing chlorine cylinders were not provided. Refer to 40 CFR 141.403 and TSS 5.1.2.f.1

### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
1105078-001 - WELL 001 PRIMARY (JAN 1990)	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. At the time of inspection, no sanitary seal was identified. A sanitary seal shall be installed. <b>See Attachment #1</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
1105078-001 - WELL 001 PRIMARY (JAN 1990)	Source	40 CFR 141.403 and LAC 51:XII.327.A.11 - All potable water well casings shall be vented to atmosphere as provided in 327.A.12 below, with the exception that no vent will be required when single-pipe jet pumps are used. At the time of inspection, the well vent screen was in poor condition.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### Attachment #1

**Severity:** Significant

**Facility ID:** WELL 001 PRIMARY (JAN 1990)

**Category:** Source

**Attachment Comments:** There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. At the time of inspection, no sanitary seal was identified. A sanitary seal shall be installed.

PWS ID LA1105081  
TANGIPAHOA Parish

Dear Mr. Dominick:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 21, 2018 sanitary survey inspection of the public water supply system for FLORIDA PAR JUV DETENTION CENTER (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

**No observations were recorded in this category.**

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	MRT is a routine bacteriological sampling site. Kitchen sink tap is not suitable for MRT. Please relocate MRT sampling site for the system. A smooth nosed tap outside of the building is preferred. Monitoring plan will be returned for you to revise.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
1105081-002 - WELL # 2	Source	There was no active secondary source of water for the system at the time of inspection. A second source is recommended for all community water supplies.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
1105084-001 - VIOLA MHP WELL	Source	Moss was growing on the safety rope of the well pump at the time of inspection and the opening surrounding the rope on top of the sanitary seal is considered a pathway for contamination into the well casing. Please repair. See <b>Attachment #1</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Daily chlorine residual within the distribution system was not measured and recorded daily at the time of inspection. Chlorine residuals must be monitored daily at the water production (POE) site and a critical point (MRT)--the furthest location in the water system. And an additional chlorine residual check must be made monthly at the ACR site.
FACILITY	CATEGORY	FINDINGS
1105084-001 - VIOLA MHP WELL	Source	At the time of inspection there was no active secondary source of water. A second source is required for all community water supplies.
FACILITY	CATEGORY	FINDINGS
1105084-001 - VIOLA MHP WELL	Source	There was no flow meter on the well discharge pipe at the time of inspection. A flow meter is required for the well discharge pipe.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

4. Have there been changes to any treatment processes?		x		
5. Does water quality data indicate inadequate/inappropriate treatment of water?	x			
6. Are all treatment processes operational and maintained?	x			
7. Is there an air gap between treatment instrumentation and waste lines?			x	
8. Were there any failures to meet required CT values?	x			
9. Did treatment plant flow rates exceed the permitted capacity?				x
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?			x	
11. Did a review of the turbidity data reveal any anomalies?			x	
12. Did a review of chlorine residual data reveal any anomalies or deficiencies?	x			
13. Was there secondary containment at for chemical storage?		x		

**Assessor Name: Jacob Haffner, P.E.**

**D. Distribution System**

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?		x		
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?			x	
3. If samples were collected from inside a building, does the site have additional water treatment installed?			x	
4. Is there evidence that the system experienced low or negative pressure?	x			
5. Was there any scheduled flushing of the distribution system?	x			
6. Are pump stations protected from unauthorized personnel?			x	
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?		x		
8. Are air relief valves maintained and operational without leaks?			x	
9. Are pump stations maintained and equipment operational?			x	
10. Are fire hydrants and blow offs maintained and operational without leaks?			x	
11. Does water quality data collected in the distribution system show results indicative of an issue?	x			
12. Have any water related customer complaints been received?		x		
13. Is there any evidence of intentional contamination in the distribution system?		x

RTCR Level 2 Assessment Form

Rev. 3/2017

**V. Issue Descriptions and Corrective Actions (Use page 7 to report additional issues)**

\* No issues were found during the assessment: ☐

Issue Description (list section letter and #)	Corrective Action
A. 8. At the time of inspection the operator was unable to provide a Cross Connection Control Plan.	Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods. A Cross Connection Control Program must be implemented.
Issue Description (list section letter and #)	Corrective Action
A. 9. At the time of inspection, a check valve at the Condo Well was leaking.	The water system shall inspect, replace or fix the check valve on the discharge pipe leading to the storage tank.
Issue Description (list section letter and #)	Corrective Action
A. 11. The New Well had a threaded hose bib for the raw water sampling tap.	The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction. The water system shall replace the threaded hose bib at the raw water tap site with a smooth nose tap.
Issue Description (list section letter and #)	Corrective Action

**Louisiana Department of Health, Office of Public Health**  
**Engineering Services – Safe Drinking Water Program**  
**RTCR Level 2 Assessment Form**

Rev. 3/2017

<p><b>C. 5. (a) It was discovered during the assessment that the water system was taking water samples from the wrong POE sampling tap for the New Well.</b></p>	<p><b>The water system shall take their samples from the first sampling tap located after the storage for the POE before the first service connection.</b></p>
Issue Description (list section letter and #)	Corrective Action
<p><b>C. 5. (b) The water system does not have sampling taps which are representative of the distribution system.</b></p>	<p><b>It is recommended that the water system install a TCR sampling tap which more accurately represents the distribution system.</b></p>
Issue Description (list section letter and #)	Corrective Action
<p><b>C. 8. (a) Chlorine residuals were being recorded by the operator and were being taken daily. These results were not shown on the form approved by the state health officer.</b></p>	<p><b>Chlorine residuals shall be taken on the form approved by the state health officer or shall be included in an addendum to the form approved by the state health officer.</b></p>
Issue Description (list section letter and #)	Corrective Action
<p><b>C. 9. (a) The New Well and the Condo Well were not equipped with flow meters.</b></p>	<p><b>The water system shall install flow meters on both wells before the check valve.</b></p>
Issue Description (list section letter and #)	Corrective Action

C. 9. (b) The chemical injection at the New Well was before the check valve.	The check valve shall be relocated to before the chemical injection point.
<b>Issue Description (list section letter and #)</b>	<b>Corrective Action</b>
C. 12. (a) At the time of inspection, the operator could not provide dosing calculations, the dosing concentration, and could not provide the amount of water being produced.	It is recommended that the operator formulate a dosing calculation and check their dosing of the water system. In addition, it is recommended that the water system keep a record of water produced.
<b>Issue Description (list section letter and #)</b>	<b>Corrective Action</b>
C. 12. (b) The water system did not have a calibration column or any means of measuring the feed rate of the chemical.	Provisions shall be made for measuring quantities of chemicals used to prepare feed solutions. The water system shall install a calibration column for their feed pumps in order to calibrate their pumps to accurately perform dosing calculations.
<b>Issue Description (list section letter and #)</b>	<b>Corrective Action</b>
D. 7. The storage tank at the Condo Well was not equipped with an overflow pipe.	All water storage structures shall be provided with an overflow pipe.

Re: Class I Sanitary Survey  
NORTH OAKS MEDICAL CENTER Public Water System  
PWS ID LA2105051  
TANGIPAHOA Parish

Dear Duhon:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 11, 2018 sanitary survey inspection of the public water supply system for NORTH OAKS MEDICAL CENTER (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### **Parties Present**

<b>Name</b>	<b>Organization</b>
Angela Gomez	LDH OPH Region 9 Engineering
Michael Cuellar	LDH Engineering Region IX
Jerry Duhon	North Oaks Medical Center

### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### **Significant Deficiencies**

**No observations were recorded in this category.**

"An Equal Opportunity Employer"

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals shall be taken daily and records maintained on the form approved by the state health officer and maintained for a period of three years. The chlorine residual should be taken at the entry point of the distribution system and point of maximum residence time. Refer to 40 CFR 141.403 and LAC 51:XII.311.A
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The overflow for the elevated storage tank does not open downward. Refer to 40 CFR 141.403. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
2105051-002 - NORTH OAKS(NEW) WELL	Source	At the time of inspection, it was noted that the holes of the existing mesh screening were not 24 mesh corrosion resistant. <b>See Attachment #1</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP002 - NORTH OAKS(NEW) WELL	Treatment	At the time of inspection, the chlorine room door was not equipped with panic hardware or a shatter resistant inspection window.
FACILITY	CATEGORY	FINDINGS
TP002 - NORTH OAKS(NEW) WELL	Treatment	At the time of the inspection, it was noted that the chlorine cylinders were not individually restrained in the chlorine building. All Chlorine cylinders should be restrained. See Attachment #3

**Additional observations**

At the time of inspection, it was noted that a permit was not kept on file for the addition chemical treatment TMB 451P.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	Our database has records of two Hydroneumatic tanks and according to my site visit it is confirmed that they are not in use. This office was unable to locate any paper work regarding the bladder tank in use. Please provide this office with the necessary paperwork and/or permits regarding the existing bladder tank.
FACILITY	CATEGORY	FINDINGS
2105066-002 - WELL PRIMARY	Source	At the time of inspection, a threaded tap was located at the POE and a cross connection was not implemented. Provide a hose bib vacuum breaker or remove all threaded taps. <b>See Attachment #7</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The PWS did not record disinfection on weekends. Chlorine residuals shall be measured at the POE and at the MRT at least once per day. Refer to 40 CFR 141.403 and LAC 51:XII.367.A. Additionally, refer to the MPP for the ACR location and it is to be measured once a month.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Records of microbiological analyses made pursuant to this part shall be kept for not less than 5 years. Records of chemical analyses made pursuant to this part shall be kept for not less than 10 years. A complete overview of the records is part of a sanitary survey and a filling system shall be in place and maintained for all LDH records. Records of bacteriological data, chemical data, TTHM data, Lead and Copper, HAA5 data, and Consumer Confidence reports. A copy of Louisiana State Sanitary Code Chapter 12, (which can be obtained online at <a href="http://www.la.gov">www.la.gov</a> )

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, the MRT was provide as a threaded tap. Additionally, TCR-003 was missing a sampling tap. Provide smooth nosed sampling taps at all sampling taps. See <b>Attachment #4 and #3</b>
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	Spill protection was not provided at the time of the sanitary survey. See <b>Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The chemical feed tank is not labeled. The chemical feed tank shall be clearly labeled with the name of the chemical contained. See <b>Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
2105066-002 - WELL PRIMARY	Source	At the time of inspection, a flow meter was not provided. Additionally, the pressure gauge was located in the covering plate of the check valve. Replace or repair the check valve and provide a pressure gauge on the distribution line after the storage tank to get a reading of pressure going into the distribution system. See <b>Attachment #5</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

"An Equal Opportunity Employer"

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	All public water supplies shall be under the supervision and control of a duly certified operator as per requirements of the State Operator Certification Act, Act 538 of 1972, as amended. There was no certified operator associated with this water supply at the time of inspection. The water system shall retain a Certified Operator.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The system was not implementing a cross connection control program at the time of inspection. A cross-connection control program shall be developed and implemented by this system. All hose bib connections shall have the required back flow prevention devices.
FACILITY	CATEGORY	FINDINGS
2105067-001 - SOUTH WELL	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. However, a hole was detected on the top of the south well casing at the time of inspection. The hole shall be sealed to prevent further contamination.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the chlorine residual for POE, MRT and ACR were measured by the system administrator but were not recorded on the state approved forms. Residuals must be recorded on the "DHH Approved Chlorine Residual Forms", which can be founded at <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a>
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	All electrical work shall conform to the requirements of the National Electric code or to relevant state and/or local codes. Electronic wirings at the south well were not in a conduit and protected from the outside elements. All electrical wiring needs to be properly protected in conduit where applicable.
FACILITY	CATEGORY	FINDINGS
TP001 - SOUTH WELL	Treatment	There was no secondary containment for the sodium hypochlorite storage at the time of inspection. A receiving basin capable of receiving accidental spills or overflows must be provided.
FACILITY	CATEGORY	FINDINGS
2105067-001 - SOUTH WELL	Source	All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction. The raw water sample tap on top of the water well was installed to discharge sideways at the time of inspection. The raw water sample tap needs to be installed to terminate in a downward direction.
FACILITY	CATEGORY	FINDINGS
2105067-001 - SOUTH WELL	Source	There was no flow meter on the well discharge pipe at the time of inspection. A flow meter is required for the well discharge pipe.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective

actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
GLOBAL WILDLIFE CENTER Public Water System  
PWS ID LA2105103  
TANGIPAHOA Parish

Dear Matherne:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 13, 2018 sanitary survey inspection of the public water supply system for GLOBAL WILDLIFE CENTER (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### **Parties Present**

<b>Name</b>	<b>Organization</b>
Angela Gomez	LDH OPH Region 9 Engineering
Michael Cuellar	LDH Engineering Region IX
Wesley Thompson	Global Wildlife Center

### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	At the time of inspection, it was noted that the fence was not capable of being locked. The fence is to be locked when unattended.
FACILITY	CATEGORY	FINDINGS
2105103-003 - GLOBAL WILDLIFE EAST WELL	Source	At the time of inspection, it was noted the check valve was leaking and possibly providing a pathway for contamination. The check valve must be repair and or replaced. Additionally, a slab is not provided at the well. <b>See Attachment #6 and #1</b>
FACILITY	CATEGORY	FINDINGS
2105103-003 - GLOBAL WILDLIFE EAST WELL	Source	The sample tap located at this well (although smooth nozzle) is not acceptable as it cannot control the flow of the water. The tap is to be replaced with a smooth nozzle type and should be cleaned or re-tapped so that adequate flow is achieved. Additionally, replace threaded sample taps with smooth nozzle types. <b>See Attachment #4 and #5</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, it was noted that chlorine residuals were not recorded on LDH approved chlorine forms. Refer to 40 CFR 141.403 and LAC 51:XII.367.D. Also, the forms can be found at <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725Approved">http://new.dhh.louisiana.gov/index.cfm/page/1725Approved</a> .
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, it was noted that the operator did not maintain records. All records including Chlorine Residuals, Bacteriological Sample Results, Lead & Copper, and Sanitary Surveys shall be kept on site and filed in a folder identifying the public water system by name as well as its public water system identification number (PWS ID #).
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of the inspection, it was noted that chlorine residuals were not being maintained on a daily basis at the MRT and POE. Chlorine residuals are to be recorded every day at the MRT and POE and once a month at the ACR. Also, these reports must be kept for a period of three years. Refer to 40 CFR 141.403 and LAC 51:XII.311.
FACILITY	CATEGORY	FINDINGS
TP001 -	Treatment	At the time of inspection, the disinfectant did not meet the

TREATMENT PLANT		appropriate ANSI/AWWA standards and/or ANSI/NSF Standard 60. <b>See Attachment #8</b>
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	At the time of inspection, it was noted that the chemical container was not fully labeled to include chemical name, purity and concentration, and supplier name and address. Refer to 40 CFR 141.403 and TSS 5.2.1.a <b>See Attachment #7</b>
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	At the time of inspection, the chemical feed rate and the flow amount was unknown. With these two unknowns it was hard to tell how much chemical is being used.
FACILITY	CATEGORY	FINDINGS
2105103-003 - GLOBAL WILDLIFE EAST WELL	Source	At the time of inspection, the air release relief valve is not covered with a 4 mesh corrosion resistant screen. The air release relief valve must be covered with a 4 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
2105103-003 - GLOBAL WILDLIFE EAST WELL	Source	At the time of inspection, The discharge piping did not have a means of measuring flow. Refer to 40 CFR 141.403 and TSS 3.2.7.3.a.4
FACILITY	CATEGORY	FINDINGS
2105103-003 - GLOBAL WILDLIFE EAST WELL	Source	During the survey it was noted that the well was not located at the appropriate distance from all possible sources of contamination. The severity of this observation is significant but due to the wells location being on a slope, the well has never been cited on past surveys and most importantly, the public water system has never had any issues with fecal coliform or total coliform this observation has been downgraded to a minor. Make note that this topic will be revisited if any bacteriological samples are positive. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
2105103-003 - GLOBAL WILDLIFE EAST WELL	Source	The well casing is exhibiting rust along with exposed wiring. The well casing, as well as all appurtenances, must be protected from physical damage. <b>See Attachment #2</b>

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
12/17/2015	01/12/2016	Sanitary Survey, Finished	Significant	Other	Management
<b>Comments:</b> At the time of inspection the filter media in the gravity filters was showing significant cracking. Please have the filter media replaced. The paint of the trough of the clarifier, clear well, and the top end of the filters was showing signs of deterioration. Please have the clarifier, clear well, and filters sand blasted and repainted.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	<p>The paint on the clarifier and trough is showing signs of deterioration, rust, and flaking paint. Please have the clarifier, clear well, and filters sand blasted and repainted.</p> <p>The injector pump for the liquid ammonium sulfate is not secured and resting on a cinder block. Injector pump should be secured to prevent equipment failure.</p> <p>The pipe gallery inside the treatment plant building is showing signs of rust, corrosion and flaking paint. The piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination of finished, treated water.</p>
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED	Finished Water Storage	The high service pumps and piping are showing signs of rust, corrosion and flaking paint. The pumps and piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance	<p>At the time of inspection there was no program in place to train replacement operators to run the treatment plant. It is important to maintain a competent and educated staff in order to maintain operations in the event of extreme circumstances or retirement.</p> <p>Please provide this office with shift schedules and information inclusive of hours of operation.</p>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The electrical wiring box, motor casing, and conduit piping at the chlorine/alum injection piping outside is showing signs of rust/corrosion. The electrical components should be cleaned and protected from the weather to prevent damage to the motor and equipment failure. Please submit labeled photographic documentation of completed repairs.
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED	Finished Water Storage	At the time of inspection the paint on the elevated tank was showing signs of wear and rust. From review the finished water storage facilities (elevated tower) should be inspected. Finished water storage

		facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	From review the finished water storage facilities (ground storage tank) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with a 4 mesh non-corrodible screen and installed to provide protection at all times.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	In the chlorine room, no weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.

### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system does not utilize the dedicated point of entry sample tap (POE-006) located on 11th Street. The water system has been substituting the sample tap on the discharge piping of the Elevated Storage Tank. Create a designated point of entry sampling location with a smooth nosed tap at a location under pressure. The tap must be located after all treatment and prior to the first customer and may not be located on the discharge piping for the Elevated Tank. Once complete, the system must submit changes to sample siting plan on Monitoring Plan Portal.
FACILITY	CATEGORY	FINDINGS
Management	Other	Soil is eroded in the area between the Ground Storage Tank and Treatment Building. The hole must be filled with dirt and graded to drain away from the well to prevent ponding of water and further erosion near the facilities.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	There was significant vegetation growth at the treatment plant and well sites for Well #3 and Well #4. Trim vegetation inside the fence and perform regular maintenance of the area.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	Soil is eroded at the base of the Elevated Tank riser. The hole must be filled with dirt and graded to drain away from the riser to prevent ponding of water and further erosion which may compromise the structural integrity of the Elevated Tank.
FACILITY	CATEGORY	FINDINGS
1107004-004 - WELL #4	Source	<p>Erosion was noted near the well slab. The area around the well slab must be properly filled and graded to prevent ponding of water near the concrete slab and possible contamination of the wellhead.</p> <p>Holes in the back of the electrical box create a void and are not properly sealed. The current electrical box has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the electrical box to prevent bacteriological contamination.</p> <p>A PVC discharge pipe connected to the motor creates a pathway for contamination into the well casing. Remove and/or screen the pipe to prevent bacteriological contamination.</p>
FACILITY	CATEGORY	FINDINGS
1107004-005 - WELL #5	Source	Holes in the motor mounting plate create a pathway for contamination into the well casing. Fill/seal the voids in the mounting plate prevent bacteriological contamination.
FACILITY	CATEGORY	FINDINGS
1107004-003 - WELL #3	Source	<p>Holes in the motor mounting plate create a pathway for contamination into the well casing. Fill/seal the voids in the mounting plate prevent bacteriological contamination.</p> <p>A PVC discharge pipe connected to the motor creates a pathway for contamination into the well casing. Remove and/or screen the pipe</p>

		to prevent bacteriological contamination.  Excessive vegetation is growing on and around the existing concrete slab and electrical panel. The vegetation must be removed and maintained to prevent any potential contamination into the well.
FACILITY	CATEGORY	FINDINGS
1107004-003 - WELL #3	Source	The well is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve. The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The sample taps for TCR-001 (Wiltz Street) and TCR-004 (Hickory Street) have been raised within a PVC conduit. However, the PVC conduit is leaning and not structurally supported. Make necessary repairs to protect the integrity of the sample tap and potable water source from damage.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	Remove/disconnect wires hanging loose from electrical box at base of Elevated Tank riser.
FACILITY	CATEGORY	FINDINGS
1107004-005 - WELL #5	Source	The air release-vacuum relief valve exhaust/relief piping is not covered by a 24 mesh corrosion resistant screen. The relief piping must be covered with a 24 mesh screen. Replace the existing screen on the relief piping with 24 mesh corrosion resistant screen to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1107004-003 - WELL #3	Source	The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
1107004-004 - WELL #4	Source	The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - MAIN WATER TREATMENT PLANT	Treatment	A full chlorine gas cylinder was not properly secured. Full and empty cylinders of chlorine gas must be restrained in position at all times to prevent upset. Properly secure all chlorine gas cylinders. Chlorine gas cylinders should be chained to wall individually.
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN WATER TREATMENT PLANT	Treatment	Holes in the lid of the brine storage tanks should be sealed/filled in order to provide complete coverage of the chemicals.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
TENSAS WATER DISTRICT ASSOCIATION Public Water System  
PWS ID LA1107009  
TENSAS Parish

Dear Mr. Thompson:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 6, 2018 sanitary survey inspection of the public water supply system for TENSAS WATER DISTRICT ASSOCIATION (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
12/17/2015	01/20/2016	Sanitary Survey, Finished	Significant	Distribution System	DS0950-DISTRIBUTION SYSTEM
<b>Comments:</b> At the time of inspection a cross connection control program had been adopted and an air gap policy has been enforced. However, a cross connection survey had not been completed to identify customers that would require a back flow preventer when an air gap is not practical. Please have a survey completed to identify high risk customers and ensure the quality of the system's drinking water.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
12/17/2015	01/20/2016	Sanitary Survey, Finished	Significant	Other	Management
<b>Comments:</b> At the time of inspection the gates at the LA3252 elevated tank and the HWY 4 ground storage tank were in disrepair and unable to provide the proper security to the sites. Please have the gates repaired.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
12/17/2015	01/20/2016	Sanitary Survey, Finished	Significant	System Management and Operation	Management
<b>Comments:</b> At the time of inspection the chemicals used for water treatment were not labeled with "Layman's terms". Please label all chemical containers with layman's terms for quick identification by someone not familiar with the treatment process.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	<p>Soil is eroded at the base of the Elevated Tank (EL003) riser at the Lake Bruin site. The hole must be filled with dirt and graded to drain away from the riser to prevent ponding of water and further erosion which may compromise the structural integrity of the Elevated Tank.</p> <p>A tree outside of the fence at the Ground Storage Tank (GR004) on Hwy 3044 (Rex James) site, is overhanging and creates a potential hazard for the tank. Tree should be trimmed and branches cut to reduce risk to ground storage tank.</p>
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	Portions of the barbed wire and/or the security fence surrounding the water system facilities was damaged/missing. Please repair the barbed wire and security fence to prevent unauthorized access to the facility and submit labeled photographic documentation of completed modifications.
FACILITY	CATEGORY	FINDINGS
GR003 - GROUND STORAGE HWY 4	Finished Water Storage	Portions of the barbed wire and/or the security fence surrounding the water system facilities was damaged/missing. Please repair the barbed wire and security fence to prevent unauthorized access to the facility and submit labeled photographic documentation of completed modifications.

		<p>The security gate was separating leaving space for unauthorized entrance. Please repair the gate/gate posts to secure the facility.</p> <p>Excessive vegetation is growing on the fence and causing it to lean. Please repair the lean and trim vegetation to reduce hazard to security fence and maintain to prevent future growth.</p>
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE HWY 608	Finished Water Storage	<p>Portions of the barbed wire and/or the security fence surrounding the water system facilities was damaged/missing. Please repair the barbed wire and security fence to prevent unauthorized access to the facility and submit labeled photographic documentation of completed modifications.</p> <p>Excessive vegetation is growing on the fence. Please trim vegetation to reduce hazard to security fence and maintain to prevent future growth.</p> <p>An area under a portion of the security fence is severely eroded creating a small ditch on the property. The ditch should be filled in to match existing grade or overlaid with concrete to utilize as a drainage structure without further erosion of the soil.</p>
FACILITY	CATEGORY	FINDINGS
GR006 - GROUND STORAGE LA892	Finished Water Storage	<p>Portions of the barbed wire on the security fence surrounding the water system facilities was damaged/missing. Please repair the barbed wire to prevent unauthorized access to the facility and submit labeled photographic documentation of completed modifications.</p>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED	Finished Water Storage	<p>From review the finished water storage facilities (elevated storage tank) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storage interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.</p>
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	<p>From review the finished water storage facilities (ground storage tank at the treatment plant) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storage interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities</p>

		could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR006 - GROUND STORAGE LA892	Finished Water Storage	From review the finished water storage facilities (ground storage tank) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storage interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE HWY 608	Finished Water Storage	From review the finished water storage facilities (ground storage tank) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storage interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR004 - GROUND STORAGE HWY 3044	Finished Water Storage	From review the finished water storage facilities (ground storage tank) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storage interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR003 - GROUND STORAGE HWY 4	Finished Water Storage	From review the finished water storage facilities (ground storage tank) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storage interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR003 - GROUND STORAGE HWY 4	Finished Water Storage	Soil is eroded at the Ground Storage overflow splash pad. The hole must be filled with dirt and graded to drain away from the facility to prevent ponding of water and further erosion.
FACILITY	CATEGORY	FINDINGS

GR006 - GROUND STORAGE LA892	Finished Water Storage	Soil is eroded at the Ground Storage overflow splash pad. The hole must be filled with dirt and graded to drain away from the facility to prevent ponding of water and further erosion.
FACILITY	CATEGORY	FINDINGS
GR004 - GROUND STORAGE HWY 3044	Finished Water Storage	Soil is eroded at the Ground Storage overflow valve pad. The hole must be filled with dirt and graded to drain away from the facility to prevent ponding of water and further erosion.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	Soil is eroded at the Hydropneumatic Tank at the treatment plant. The hole must be filled with dirt and graded to drain away from the facility to prevent ponding of water and further erosion.
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED	Finished Water Storage	The overflow pipe is not properly screened. The overflow pipe must be screened with 24 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE HWY 608	Finished Water Storage	The overflow pipe is not properly screened. The overflow pipe must be screened with 24 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
GR003 - GROUND STORAGE HWY 4	Finished Water Storage	The overflow pipe is not properly screened. The overflow pipe must be screened with 24 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
EL003 - ELEVATED LA604	Finished Water Storage	The overflow pipe is not properly screened. The overflow pipe must be screened with a 4 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The overflow pipe is not properly screened. The overflow pipe must be screened with a 4 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
GR005 - GROUND STORAGE LA604	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with 24 mesh non-corrodible screen and installed to provide protection at all times.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - LAKE BRUIN TREATMENT PLANT	Treatment	For the chlorine room at Ground Storage Tank (GR004) on Highway 3044 (Rex James) site, no weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.
FACILITY	CATEGORY	FINDINGS
TP001 - LAKE BRUIN TREATMENT PLANT	Treatment	<p>For the chlorine room at Ground Storage Tank (GR004) on Highway 3044 (Rex James) site, the ventilating fan is currently not operational. Either the fan is broken or there is an electrical issue. The chlorine room must be equipped with a working ventilating fan.</p> <p>The chlorine room associated with the chlorine dioxide treatment does not include a working ventilating fan or lighting. The chlorine room must be equipped with a working ventilating fan and lighting.</p> <p>The chlorine room associated with the chloramine treatment does not include a working ventilating fan or lighting. The chlorine room must be equipped with a working ventilating fan and lighting.</p>

## **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	<p>The overflow of the Pointe Aux Chene Elevated Storage Tank is leaking. The overflow was modified to be located within the inlet/outlet pipe of the elevated storage tank, such that it is fully surrounded by finished water. Water is steady flowing out of the overflow so much so that the ground around the tank is saturated</p> <p>See Attachment #1</p> <p>LAC 51:XII.233.A - All potable water systems shall be designed, constructed and maintained so as to prevent leakage of water due to defective materials, improper jointing, corrosion, settling, impacts, freezing, or other causes. Valves and blow-offs shall be provided so that necessary repairs can be made with a minimum interruption of service.</p>
FACILITY	CATEGORY	FINDINGS
Management	Security	<p>The Robinson Elevated Tank is not located within a fenced in area.</p> <p>40 CFR 141.403 and LAC 51:XII.315.D - All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked.</p>
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	<p>Tank repainting and modification projects were completed without LDH approval.</p> <p>The overflow for some tanks was modified such that the the overflow is located within the inlet/outlot of the water storage area.</p> <p>Chlorine Dioxide generator system was modified without LDH</p>

		<p>approval.</p> <p>Please provide as built plans for review.</p> <p>LAC XII:105.A - No public water supply shall be hereafter constructed, operated or modified to the extent that the capacity, hydraulic conditions, functioning of treatment processes, or the quality of finished water is affected, without, and except in accordance with the plans and specifications for the installation which have been approved, in advance, as part of a permit submitted by the person having responsible charge of a municipality owned public water supply or by the owner of a privately owned public water supply. The permit shall be issued by the state health officer prior to the start of such construction or modification.</p>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	<p>There is no air gap or other approved backflow preventer on the raw water prime water line. There is no air gap on the discharge line of some turbidimeter drain lines and on the corrosion control coupon rack drain line.</p> <p>See Attachment #2</p> <p>40 CFR 141.403 and LAC 51:XII.343.A - There shall be no physical connection between a public water supply and any other water supply which is not of equal sanitary quality and under an equal degree of official supervision. and there shall be no connection or arrangement by which unsafe water may enter a public water supply system.</p>
FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	<p>No day tank provided for fluoride.</p> <p>See Attachment #3</p> <p>LAC 51:XII.203.K.2 - Day tanks shall be provided when bulk storage of fluoride is used.</p>

#### Deficiencies

FACILITY	CATEGORY	FINDINGS
EL005 - KLONDYKE TOWER	Finished Water Storage	<p>Overflow does not discharge over a drainage inlet or splash plate.</p> <p>LAC 51:XII.225.I.1 - All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.</p>

FACILITY	CATEGORY	FINDINGS
EL008 - POINTE- AUX- CHENES TOWER	Finished Water Storage	<p>Overflow was modified and relocated such that it is inside the inlet/outlet pipe. The overflow is now surrounded by finished water. Overflow is leaking profusely, such that the ground around the site is saturated.</p> <p>40 CFR 141.403 and LAC 51:XII.337.A - All cisterns and storage tanks shall be of watertight construction and made of concrete, steel or other materials approved for this purpose by the state health officer. When located wholly or partly below ground, such storage basins shall be corrosion resistant materials.</p>
FACILITY	CATEGORY	FINDINGS
EL007 - NORTH TERREBON NE STANDPIPE	Finished Water Storage	<p>The mesh screen is damaged.</p> <p>40 CFR 141.403 and LAC 51:XII.225.I.c - The overflow for an elevated tank shall open downward and be screened with a four mesh, non-corrodible screen. The screen shall be installed within the overflow pipe at a location least susceptible to damage by vandalism. If a flapper is used, a screen shall be provided inside the valve.</p>
FACILITY	CATEGORY	FINDINGS
EL006 - MONTEGU T TOWER	Finished Water Storage	<p>The overflow discharge is full of sediment which may impede its ability to waste water in excess of filling rate.</p> <p>40 CFR 141.403 and LAC 51:XII.225.I.d - The overflow pipe shall be of sufficient diameter to permit waste of water in excess of the filling rate.</p>
FACILITY	CATEGORY	FINDINGS
EL005 - KLONDYKE TOWER	Finished Water Storage	<p>The overflow does not open downward.</p> <p>40 CFR 141.403 and LAC 51:XII.225.I.d - The overflow for an elevated tank shall open downward and be screened with a four mesh, non-corrodible screen. The screen shall be installed within the overflow pipe at a location least susceptible to damage by vandalism. If a flapper is used, a screen shall be provided inside the valve.</p>
FACILITY	CATEGORY	FINDINGS
EL005 - KLONDYKE TOWER	Finished Water Storage	<p>The tank coating appears worn and in need of refurbishment.</p> <p>40 CFR 141.403 and LAC 51:XII.225.S - Proper protection shall be given to metal surfaces by paints or other protective coatings, by cathodic protective devices, or by both.</p>
FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMEN T PLANT	Treatment	<p>Copper Sulfate tank is not labelled.</p> <p>40 CFR 141.403 and LAC 51:XII.201.K.e - Tanks and tank refilling line entry points shall be clearly labeled with the name of the chemical contained.</p>

FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMEN T PLANT	Treatment	Fluoride bulk storage does not have secondary containment.  LAC 51:XII.201.J.10 - Liquid storage tanks shall be located and secondary containment provided so that chemicals from equipment failure, spillage or accidental drainage shall not enter the water in conduits, treatment or storage basins. Secondary containment volumes shall be able to hold the volume of the largest storage tank. Piping shall be designed to minimize or contain chemical spills in the event of pipe ruptures.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

TP001 - SURFACE WATER TREATMENT PLANT	Treatment	Raw water sample tap is threaded. This could lead to inadvertent use of raw water for cleaning or other purposes. Smooth-nosed sampling taps shall be provided for control purposes. Taps shall be located on each raw water source, each treatment unit influent and each treatment unit effluent.

February 5, 2018

Rebekah E. Gee MD, MPH

SECRETARY

Bill Mitcham  
BERNICE WATER SYSTEM  
P O Box 633  
Bernice, LA 71222

Re: Class I Sanitary Survey  
BERNICE WATER SYSTEM Public Water System  
PWS ID LA1111001  
UNION Parish

Dear Mr. Mitcham:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the February 1, 2018 sanitary survey inspection of the public water supply system for BERNICE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

Name	Organization
Matthew Page	Ldh Oph Engineering Services
Sherry Fuller	Bernice Water System

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

No observations were recorded in this category.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The paint and coating on the storage tank located on Vine ST. is in need of attention. The rust on the surface of the tank needs to be addressed. The tank needs to be repainted to prevent any permanent damage caused by rust.
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED	Finished Water Storage	The screen on the overflow is too large. Replace or add a four mesh, non-corrodible screen to the overflow.
FACILITY	CATEGORY	FINDINGS
EL003 - ELEVATED	Finished Water Storage	The screen on the overflow is too large. Replace or add a four mesh, non-corrodible screen to the overflow.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	The water level gauge located on the ground storage tank needs to be repaired or replaced with a pressure gauge. A means for reading the water level inside the tank needs to be present.
FACILITY	CATEGORY	FINDINGS
TP004 - WELL #4	Treatment	The fan and light at well #4 needs to be wiring to a switch located on the outside of the building. This will allow chlorine gas to be pushed out, in the case of a leak, without having to enter the building.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is recommended that the water system have all storage tanks inspected, cleaned, repaired, repainted, or replaced every 3-5 years or as needed. Having tanks inspected every 3-5 years can help resolve problems before they become major problems for the water system.
FACILITY	CATEGORY	FINDINGS
TP003 - WELL #3	Treatment	The chain holding the chlorine bottles appears to have corroded. Replace the chain or the latch in order to ensure the bottles are secure.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the inspection, it was noted several large trees capable of causing major damage to system components are present inside and immediately outside the fencing at the site. Remove the trees from the area to reduce the risk of potential damage to system equipment and property.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	At the time of the inspection, it was noted water was standing between the 2 ground storage tanks. It was reported this was due to recent construction where the ground had settled and was not draining correctly. Add dirt to fill in the affected area to prevent standing water next to the ground storage tanks.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND	Finished Water Storage	At the time of the inspection, it was noted water was standing between the 2 ground storage tanks. It was reported this was due to recent construction where the ground had settled and was not draining correctly. Add dirt to fill in the affected area to prevent standing water next to the ground storage tanks.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. "An Equal Opportunity Employer"

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
SP001 - STAND PIPE	Finished Water Storage	The screen on the overflow piping was not 24 mesh and an appropriate screen needs to be installed. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. Openings or vents shall face downward and shall be not less than 2 feet above the floor of a pump room, the roof or cover of a tank, the ground surface or the surface of other water supply structures.
FACILITY	CATEGORY	FINDINGS
1111008-003 - WELL #3, CHELSEA LANE	Source	At the time of inspection, there was erosion around the well slab from the use of the well discharge piping. The ground around the well needs to be filled in to maintain a level grading away from the well. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1111008-005 - WELL #5 PITTMAN ROAD SOUTH	Source	At the time of inspection, there was erosion around the well slab from the use of the well discharge piping. The ground around the well needs to be filled in to maintain a level grading away from the well. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well

		slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
--	--	--

### Deficiencies

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK @ CHELSEA SITE	Finished Water Storage	The area around the storage tank is excessively eroded. This area must be well drained to facilitate the rapid removal of water within a 50' radius of the storage tank. The ponding water presents a potential source of contamination and potentially compromise the integrity of the structure.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE TANK @ PITTMAN SITE	Finished Water Storage	The area around the storage tank is excessively eroded. This area must be well drained to facilitate the rapid removal of water within a 50' radius of the storage tank. The ponding water presents a potential source of contamination and potentially compromise the integrity of the structure.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The pressure gauge for the elevated storage tank is broken. The pressure gauge shall be repaired/replaced and brought back to working order, unless the water system implements another way of monitoring the water pressure in this structure.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

Re: Class I Sanitary Survey  
Marion Water System Public Water System  
PWS ID LA1111011  
Union Parish

Dear Mr. Franklin:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 6, 2018 sanitary survey inspection of the public water supply system for Marion Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

##### **Name**

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

"An Equal Opportunity Employer"

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, the water system had adopted a Cross Connection Control Program (CCCP) but is not enforcing the CCCP with all of its customers. All customers with backflow prevention devices should provide yearly testing documentation for review. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers, and current annual test reports for all customers with backflow preventers.
FACILITY	CATEGORY	FINDINGS
EL003 - ELEVATED	Finished Water Storage	The elevated tank is equipped with a threaded nozzle tap. The tap must be smooth nozzle type or be equipped with an atmospheric vacuum breaker. Please remove or replace the threaded tap with a smooth nozzle type or equip it with a vacuum breaker.
FACILITY	CATEGORY	FINDINGS
1111011-004 - WELL #4	Source	In addition to the smooth nozzle sampling tap, the well is equipped with a threaded tap. The tap must be smooth nozzle type or be equipped with an atmospheric vacuum breaker. Please remove or replace the threaded tap with a smooth nozzle type or equip it with a vacuum breaker.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
1111011-003 - WELL #3	Source	At the time of inspection, small access holes on the well pump wiring box at Well #3 were open to the atmosphere. Please cover these holes with silicone or other material to prevent the possible entrance of foreign substances, insects, or organisms that could lead to bacteriological contamination.
FACILITY	CATEGORY	FINDINGS
1111011-004 - WELL #4	Source	At the time of inspection, small access holes on the well pump wiring box at Well #4 were open to the atmosphere. Please cover these holes with silicone or other material to prevent the possible entrance of foreign substances, insects, or organisms that could lead to bacteriological contamination.
FACILITY	CATEGORY	FINDINGS
1111011-003 - WELL #3	Source	At the time of inspection, the check valve on Well #3 was not working properly. A properly functioning check valve must be provided. Please have the check valve inspected and/or replaced.
FACILITY	CATEGORY	FINDINGS
1111011-004 - WELL #4	Source	At the time of inspection, the check valve on Well #4 was not working properly. A properly functioning check valve must be provided. Please have the check valve inspected and/or replaced.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

The water system stated that the elevated tank (EL002) on Kennedy Street has been decommissioned since October of 2016. Until the elevated tank is properly deconstructed or abandoned, please consult with an engineer to determine the adequate water loading to insure the structural integrity of the tank during periods of inclement weather.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services

SALEM WATER SYSTEM  
P O Box 276  
Farmerville, LA 71241

Re: Class I Sanitary Survey  
SALEM WATER SYSTEM Public Water System  
PWS ID LA1111014  
UNION Parish

Dear Mr. Taylor:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the February 1, 2018 sanitary survey inspection of the public water supply system for SALEM WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

<b>Name</b>	<b>Organization</b>
Matthew Page	Ldh Oph Engineering Services
Lee Hicks	Salem Water System
Gary W Taylor	Salem Water System

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

No observations were recorded in this category.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - WELL 1 & 3 BLEND	Treatment	At the time of the inspection the vent fan did not appear to be working. Repair or replace the vent fan to allow for chlorine gas to be pushed out of the room in case of a leak.
FACILITY	CATEGORY	FINDINGS
1111014-003 - WELL #3	Source	A 24 mesh screen needs to be placed over the vent to prevent any animal from entering through the open vent.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is recommended that all storage tanks be inspected, repaired, repainted, or replaced every 3-5 years or as needed. Having tanks inspected every 3-5 can address problems before they become major issues for the water system.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL 1 & 3 BLEND	Treatment	The chlorine bottles need to be secured to prevent falling over. Add a chain or rope to secure the bottles to not allow the possibility of a bottle falling and damaging something.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Tyler Lollis	LDH/OPH Engineering Region 8
Robert M. Grier	Grier Plumbing

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	The fencing surrounding the Bear Creek Rd. well site has been compromised by the overflow from the ground storage tank. The sections of the fence that are intact have significant gaps near the ground that leave the water system facilities exposed. A continuous fence, capable of being locked, must be constructed to prevent trespassing, vandalism, and sabotage of the water system facilities. Please submit labeled photographic documentation of completed repairs.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The system did not provide evidence during the sanitary survey that it has performed a cross connection survey or is enforcing a cross connection control program. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.
FACILITY	CATEGORY	FINDINGS
1111015-003 - WELL #3	Source	The well is currently inactive and has not been plugged and abandoned. All wells that are not being used as a source of water must be properly plugged and abandoned in accordance with all of Louisiana's applicable standards, rules and regulations. Upon completion, provide written documentation to LDH stating that the well has been properly plugged and abandoned.
FACILITY	CATEGORY	FINDINGS
1111015-002 - WELL #2	Source	The wells casing vent is not covered by a 24 mesh corrosion resistant screen. The wells casing vent must be covered by a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1111015-004 - WELL #4	Source	The wells casing vent screen is broken. The wells casing vent must be covered by a 24 mesh corrosion resistant screen.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The elevated storage tank shows signs of corrosion. The tank should be inspected, cleaned, and if needed, repaired and painted. All tanks should be cleaned and inspected on a 3 year cycle.
FACILITY	CATEGORY	FINDINGS

GR001 - GROUND STORAGE TANK	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with twenty-four mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1	Treatment	The light is currently not operational, either the bulb is burned or there is an electrical issue. The chlorine room must be equipped with a working light.
FACILITY	CATEGORY	FINDINGS
TP002 - WELL #2	Treatment	The light is currently not operational, either the bulb is burned or there is an electrical issue. The chlorine room must be equipped with a working light.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1	Treatment	The ventilating fan is currently not operational. Either the fan is broken or there is an electrical issue. The chlorine room must be equipped with a working ventilating fan.
FACILITY	CATEGORY	FINDINGS
TP002 - WELL #2	Treatment	The ventilating fan is currently not operational. Either the fan is broken or there is an electrical issue. The chlorine room must be equipped with a working ventilating fan.
FACILITY	CATEGORY	FINDINGS
1111015-004 - WELL #4	Source	Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. The pressure gauge is currently installed downstream of the check valve. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1111015-004 - WELL #4	Source	The air release-vacuum relief valve piping is not covered by a 24 mesh corrosion resistant screen. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1111015-002 - WELL #2	Source	The well discharge piping is not equipped with a pressure gauge, a check valve, a means of measuring flow, and a gate valve immediately downstream of the wellhead. A pressure gauge, a check valve, a means of measuring flow, and a gate valve must be provided.
FACILITY	CATEGORY	FINDINGS
1111015-001 - WELL #1	Source	The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination
FACILITY	CATEGORY	FINDINGS
1111015-001 - WELL #1	Source	The well is not equipped with a casing vent. The well must be equipped with a downturned casing vent with appropriate non-corrodible 24 mesh screening, a minimum of height of 12 above grade or floor, and a minimum diameter of 1 inch.
FACILITY	CATEGORY	FINDINGS
1111015-001 - WELL #1	Source	The well is not equipped with a gate valve, a pressure gauge, and a means of measuring flow located at a point where positive pressure is maintained. A gate valve, a pressure gauge, and a

		means of measuring flow must be provided.
FACILITY	CATEGORY	FINDINGS
1111015-004 - WELL #4	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1	Treatment	The chlorine gas cylinders are not properly secured. Full and empty cylinders of chlorine gas must be restrained in position individually at all times to prevent upset. Properly secure all chlorine gas cylinders individually.
FACILITY	CATEGORY	FINDINGS
TP002 - WELL #2	Treatment	The chlorine gas cylinders are not properly secured. Full and empty cylinders of chlorine gas must be restrained individually in position at all times to prevent upset. Properly secure all chlorine gas cylinders individually.

PWS ID LA1111016  
UNION Parish

Dear Mr. Smith:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the January 25, 2018 sanitary survey inspection of the public water supply system for WARDS CHAPEL WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

Wards Chapel Water System

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

No observations were recorded in this category.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
1111016-003 - WELL #3	Source	The pressure gauge located at Well #3 appears to be broken. Replace the pressure gauge with a working gauge in order to have accurate pressure readings from well.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is recommended that all storage tanks be inspected, repaired, repainted, or replaced, every 3-5 years or as needed. Having tanks inspected every 3-5 years can address problems before they become major issues for the system.
FACILITY	CATEGORY	FINDINGS
TP003 - WELL #3	Treatment	It is recommended that the chlorine bottles houses at well #3 have a cover that eliminates the bottles from being exposed to direct sunlight.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the survey, no cross connection control program was in place. Complete a cross connection survey to identify any potential threats to the system. Once a system is completed, those potential threats shall install and annually test a backflow device to protect the system from a backflow situation.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
1111021-001 - WELL #1 (EAST)	Source	It appears the well vent was plugged on well 1. Add a well vent to the well.
FACILITY	CATEGORY	FINDINGS
1111021-001 - WELL #1 (EAST)	Source	Scrape and paint any rusty areas located on the casing and the upper well terminal for well 1 (east well) with a paint that meets NSF 61 standards.
FACILITY	CATEGORY	FINDINGS
1111021-001 - WELL #1 (EAST)	Source	The well needs a working pressure gauge and flow meter. Add ensure that the well has these working gauges to accurately detect any problems with the well.
FACILITY	CATEGORY	FINDINGS
1111021-001 - WELL #1 (EAST)	Source	There were small cracks beginning to form in the slab. At this time these cracks do no present a problem, but if left unattended could spread or grow and cause a potential pathway for contamination. Fix or seal the crack to prevent furthur cracking and eliminate the possibility of a contamination hazard.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is recommended that all storage tanks be inspected, cleaned, repainted, repaired, or replaced every 3-5 years or as needed.

"An Equal Opportunity Employer"

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of survey, the Litroe Water System did not provide any records for review. LDH made repeated attempts after the survey to get in contact with the record-keeper with no success. The system shall ensure that records and reports are satisfactorily maintained and retrievable upon request.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1 & #2	Treatment	The chlorine feed room door is broken off of the hinges. The chlorine room door shall be installed properly to the building.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1 & #2	Treatment	The light is currently not operational, either the bulb is burned or there is an electrical issue. The chlorine room must be equipped with a working light.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1 & #2	Treatment	There is no automatic switch-over mechanism for the chlorine gas cylinders, which presents the possibility of interrupted disinfection. The switchover mechanism must be properly installed to assure continuous disinfection.
FACILITY	CATEGORY	FINDINGS
1111025-001 - WELL #1	Source	The well discharge piping is not equipped with a flow measuring device. A means for measuring flow must be provided. Install a device used to measure flow (or monitoring methods) from the well to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1111025-002 - WELL #2	Source	The well discharge piping is not equipped with a working pressure gauge or a flow measuring device. A pressure gauge and a means for measuring flow must be provided. Install a device used to measure flow (or monitoring methods) from the well and replace the pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1111025-001 - WELL #1	Source	The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
1111025-002 - WELL #2	Source	The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to

correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1 & #2	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

PWS ID LA1113001  
VERMILION Parish

Dear Mr. Piazza:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the September 11, 2017 sanitary survey inspection of the public water supply system for CITY of ABBEVILLE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

#### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	A cross connection control ordinance has been adopted by the water system. However during the survey LDH found several customers that had not completed their annual test. The list of customers requiring a backflow preventer provided by the water system during the survey had not been updated since 2012. The water system must demonstrate that there is a working cross connection program. Please send this office an updated list of customers requiring backflow preventers, updated annual test reports for all customers on the list and records to demonstrate that the water system has exhausted efforts to obtain test reports from non-compliant customers.

#### **Minor Deficiencies**

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Kyle Champagne,  
825 Kaliste Saloom Road  
Brandywine 3, Suite 100  
Lafayette, LA 70508

The following compliance history is provided for your information

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

Sample ID	Type	Date	Comment	Chlorine Residual	
				Free	Total

Office of Public Health

CERTIFIED MAIL: 7014 2870 0001 8149 3346

March 13, 2018

Pam Blakely  
TOWN of DELCAMBRE WATER SYSTEM  
107 N Railroad  
Delcambre, LA 70528

Re: Class I Sanitary Survey  
TOWN of DELCAMBRE WATER SYSTEM Public Water System  
PWS ID LA1113004  
VERMILION Parish

Dear Mayor Blakely:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 8, 2018 sanitary survey inspection of the public water supply system for TOWN of DELCAMBRE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Kyle Champagne	LDH Region IV Engineering
Kristen Hungerford	LDH Region IV - District 3
Hayden Keigley	LDH Region IV Engineering
Homer Stelly	Town Of Delcambre
Shirley Wyles	Town Of Delcambre Water System

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been enforcing the CCCP and there were no current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological test and chemical test results reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, the test results were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website.

		A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website at the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	The elevated tower is not equipped with a pressure gauge or another way to monitor the water level in the tank. A pressure gauge or another way of monitoring the water level in this structure must be installed.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	The elevated tower is not equipped with a smooth-nosed sampling tap. The elevated tower must be equipped with a smooth-nosed sampling tap to facilitate bacteriological and chemical analyses, when needed.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK #1	Finished Water Storage	The level gauge for the ground storage tank is broken. The level gauge shall be repaired and brought back to working order, unless the water system implements another way of monitoring the water level in this structure.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE TANK #2	Finished Water Storage	The level gauge for the ground storage tank is broken. The level gauge shall be repaired and brought back to working order, unless the water system implements another way of monitoring the water level in this structure.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK #1	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with 24 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	There is not a receiving basin capable of receiving accidental spill or overflows in the area where potassium permanganate is fed. A floor drain near the potassium permanganate feed tank will not allow accidental discharges to be contained for proper clean up. A receiving basin capable of receiving accidental spill or overflows without uncontrolled discharges is needed.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to

correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Kyle Champagne,  
825 Kaliste Saloom Road

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological test and chemical test results reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, some test results were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website at the

		following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE #2	Finished Water Storage	
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	The overflow for the elevated storage tank does not discharge over a splash plate or drainage inlet structure. The discharge must discharge over a splash plate or drainage inlet structure to prevent erosion around the foundation of the tower that could comprise the structural integrity of the tower.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE #1	Finished Water Storage	The overflow piping for the ground storage tank terminates too close to the drain. The discharge outlet must be installed at an elevation between 12 and 24 above a drainage inlet structure or a splash plate. Modify the existing overflow piping to maintain an adequate elevation above the drainage inlet structure.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE #2	Finished Water Storage	The screen for the ground storage overflow pipe is damaged. The overflow pipe must be screened with a twenty-four mesh, non-corrodible screen. Replace the damaged screen to provide sanitary protection at all times.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The brine and potassium permanganate tanks are not properly labeled. The chemical feed tanks must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer each of the chemical feed tanks.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The water system has only one (1) chlorine injection pump installed. Systems that require chlorination to protect the water supply must have a sufficiently sized replacement pump on standby. Provide documentation stating that a replacement pump has been provided onsite for chlorine injection and continuous disinfection.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	There is no secondary containment provided for the potassium permanganate used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment for the potassium permanganate storage tank with a sufficient containment volume.
FACILITY	CATEGORY	FINDINGS
1113005-002 - WELL	Source	Pressure gauges are installed on the discharge piping

#4		upstream of check valves as a means to measure actual operating head conditions. The pressure gauge is currently installed downstream of the check valve. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1113005-003 - WELL #5	Source	Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. The pressure gauge is currently installed downstream of the check valve. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1113005-003 - WELL #5	Source	The wells discharge piping discharges into a storm drain pipe that does not have a proper air gap. An air gap of 2 times the diameter of the pipe is required to protect against the possibility of contamination.
FACILITY	CATEGORY	FINDINGS
1113005-002 - WELL #4	Source	The wells discharge piping discharges into a storm drain pipe that does not have a proper air gap. An air gap of 2 times the diameter of the pipe is required to protect against the possibility of contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
06/22/2016	07/25/2016	Sanitary Survey, Finished	Minor	M&R and Data Verification	Management
<b>Comments:</b> Chlorine residuals must be monitored monthly at the ACR (additional chlorine residual) site. These points were established during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. The water system must begin measuring and recording the residuals at the ACR location on a monthly basis, and submit proof of recordkeeping to this office.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
06/22/2016	07/25/2016	Sanitary Survey, Finished	Minor	M&R and Data Verification	Management
<b>Comments:</b> The water system was not able to retrieve records to provide evidence of sufficient maintenance or breadth of record keeping. Disinfectant Residual Monitoring records could not be produced at the time of survey. These records shall be maintained on forms approved by the state health officer and shall be retained as prescribed in the national primary drinking water regulations, and shall be made available for review upon request by the state health officer. The water system must provide documentation for the last two (2) years of Disinfectant Residual Monitoring for the Point of Entry (POE) and Maximum Residence Time (MRT) to this office.					

**Significant Deficiencies**

No observations were recorded in this category.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	The current monitoring plan for the water system will need to be updated. During the survey, it was noted that the map for the water system's monitoring plan will need to be updated to reflect the addition of an approved location for the point of entry (POE) sampling site. This task can be accomplished by logging into the Monitoring Plan Portal (MPP) at the following link: <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a> . The monitoring plan will be returned for the addition of an approved POE location by the water system. For assistance, please feel free to call me at (337) 262-5634.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	The water system elected to switch its method of disinfection from chlorination to chloramination due to the high concentrations of naturally occurring Ammonia in the groundwater sources. As a result, a Nitrification Control Plan (NCP) was adopted by the water system in December of 2017 to meet the minimum monitoring criteria and industry standards as specified in the Disinfection Rule (LAC 51:XII.367.G-H). Upon review, some of the monitoring site designations and locations in the NCP are incorrect. Please revise part IV of the NCP and submit it to the District Office for review and approval. It can be submitted to Steven Joubert via email at <a href="mailto:Steven.Joubert@la.gov">Steven.Joubert@la.gov</a> or by mailing it to the following address: Steven R. Joubert, P.E. 707-A East Prien Lake Road Lake Charles, LA 70601
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	There is no receiving basin capable of receiving accidental spill or overflows in the area where potassium permanganate is fed. A floor drain near the potassium permanganate feed tank will not allow accidental discharges to be contained for proper clean up. A receiving basin capable of receiving accidental spills or overflows without uncontrolled discharges is needed.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1113006-002 Well #3 Southwest Well	Source	The air release-vacuum relief valve piping is not screened. The air release-vacuum relief valve piping must be covered with a 24 mesh, corrosion resistant screen. Install a 24 mesh, non-corrodible screen on the relief piping to protect against potential entrance of contaminants.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1113006-002 Well #3 Southwest Well	Source	The well's outer casing, casing vent piping, discharge piping, and the steel members used to support the pump are showing signs of rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and the steel support members must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel support members to eliminate sources of potential contamination and structural failure.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	Currently, the point of entry (POE) sampling tap is located prior to the elevated tower. The POE site needs to be relocated for proper sampling. The tap must be located after all treatment processes, pumps, and water storage facilities and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. This task must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	No weighing scales are provided for the chlorine gas cylinders. Weighing scales shall be provided where chlorine gas is utilized. The water system currently uses automatic switch over between 2 - 150 lb. gas cylinders to guarantee continuous disinfection.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Hayden K. Keigley, P.E.  
825 Kaliste Saloom Road  
Brandywine 3, Suite 100  
Lafayette, LA 70508

The following compliance history is provided for your information:

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

Sample ID	Type	Date	Comment	Chlorine Residual	
				Free	Total
A1718355-001	Routine	12/12/2017		0.210	8.600

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

Violation No.	Violation Date	Violation Type	Compliance Period
4002118	04/05/2018	Inadequate Minimum Chlorine Residual (GW&SW)	04/01/2018 - 04/30/2018
4002117	03/13/2018	Inadequate Minimum Chlorine Residual (GW&SW)	03/01/2018 - 03/31/2018
4002116	01/10/2018	Inadequate Minimum Chlorine Residual (GW&SW)	01/01/2018 - 01/31/2018
4002115	12/13/2017	Inadequate Minimum Chlorine Residual (GW&SW)	12/01/2017 - 12/31/2017

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at (337) 262-5634.

Department of Health  
Office of Public Health

CERTIFIED MAIL: 7014 2870 0001 8149 4961

September 21, 2018

Mr. Kirk Champagne  
CITY of KAPLAN WATER SYSTEM  
701 N. Cushing Avenue  
Kaplan, LA 70548

Re: Class I Sanitary Survey  
CITY of KAPLAN WATER SYSTEM Public Water System  
PWS ID LA1113009  
VERMILION Parish

Dear Mr. Champagne:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 23, 2018 sanitary survey inspection of the public water supply system for CITY of KAPLAN WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Ebenezer Omojola	LDH OPH Region IV Engineering
Kristen Hungerford	LDH OPH Region IV Engineering
Marcus Richard	City Of Kaplan

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The distribution portion of the water system is not under the control and supervision of a duly certified operator. The distribution system, per population and system design at the time of the survey, must be placed under the supervision and control of a certified operator holding at least a Level 3 certification in the Water Distribution category. The operator certification office can be reached by phone at (225) 342-7508. The operator certification website is located on LDHs website using the following link: <a href="http://www.dhh.louisiana.gov/index.cfm/page/416">http://www.dhh.louisiana.gov/index.cfm/page/416</a> .
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been enforcing the CCCP and there were no current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological test and chemical test results reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, the Lead & Copper test results for 2014 and 2017 were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH.

"An Equal Opportunity Employer"

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin recording residuals on the updated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT FOR WELLS #3 & #4	Treatment	The chlorine gas room must be constructed with an air intake located near the ceiling. Install a screened air intake louver or openings near the ceiling to properly ventilate the chlorine gas room. Air movement should be through screened louvers or openings near the ceiling. Every square foot of space requires at least 1 square inch of effective opening for proper ventilation.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT FOR WELLS #3 & #4	Treatment	The ventilating fan in the chlorine room must take suction near the floor, as far as practical from the door and air inlet. The existing fan must be relocated to meet this requirement.
FACILITY	CATEGORY	FINDINGS
1113009-001 - WELL #4	Source	The well's pressure gauge is broken. The well's discharge piping must be equipped with a working pressure gauge.
FACILITY	CATEGORY	FINDINGS
1113009-002 - WELL #3	Source	There is no pressure gauge installed on the discharge piping of the well. A pressure gauge must be installed on the discharge piping upstream of the check valve as a means to measure the actual operating head conditions. Install a pressure gauge on the well discharge piping to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to

See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

**No observations were recorded in this category.**

**Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR001 Ground Storage Tank	Finished Water Storage	From review, the ground storage tank should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the ground storage tank's interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facility could benefit from an inspection.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1113019-002 Well #2 (South Well)	Source	A pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1113019-001 Well #1 (North Well)	Source	A pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1113019-002 Well #2 (South Well)	Source	The screening on the air release-vacuum relief valve is damaged. The air release-vacuum relief valve must be covered with a 24 mesh, corrosion resistant screen. Replace the air relief valve screen to prevent the entrance of contaminants.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1113019-001 Well #1 (North Well)	Source	The screening on the air release-vacuum relief valve is damaged. The air release-vacuum relief valve must be covered with a 24 mesh, corrosion resistant screen. Replace the air relief valve screen to prevent the entrance of contaminants.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1113019-001 Well #1 (North Well)	Source	The well's outer casing, casing vent piping and discharge piping are showing signs of rust, corrosion and flaking paint. The well's outer casing, casing vent piping and discharge piping must be maintained to avoid further corrosion and deterioration. Clean, treat and paint the well's outer casing, casing vent piping and discharge piping to prevent sources of potential contamination.

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1113029-002 - WELL #2- NORTH WELL	Source	The well's outer casing is showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat, and paint the well's outer casing to prevent sources of potential contamination.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	During the survey, it was apparent that the procedures being used by the water system to check daily chlorine residuals were being performed incorrectly. Personnel should review the correct methods for the equipment that is being used to sample for chlorine residuals.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system's total coliform monitoring plan is outdated and will be returned for updating. Each TCR monitoring site must have a valid address and a brief description of the physical location of the sample tap. The water system can update the required monitoring sites worksheet by logging into the Monitoring Plan Portal at <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a> . OPH Region 4 engineering staff can be reached by phone @ 337-262-5746 to discuss the review and approval of the monitoring plan.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE	Finished Water Storage	The screen for the ground storage overflow pipe is damaged. The overflow pipe must be screened with a twenty-four mesh, non-corrodible screen. Replace the damaged screen to provide sanitary protection at all times.
FACILITY	CATEGORY	FINDINGS
1113029-001 - WELL #1- SOUTH WELL	Source	The well is equipped with a check valve that appears to be malfunctioning. The well must be equipped with a working check valve.

December 19, 2018

Mr. Clint Dugas  
SOUTHEAST WW DISTRICT NO 2  
Abbeville, LA 70510

Re: Class I Sanitary Survey  
SOUTHEAST WW DISTRICT NO 2 Public Water System  
PWS ID LA1113031  
VERMILION Parish

Dear Mr. Dugas:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the November 29, 2018 sanitary survey inspection of the public water supply system for SOUTHEAST WW DISTRICT NO 2 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Ebenezer Omojola	LDH OPH Region IV Engineering
Tony Richard	Southeast WWD 2
Jeremy Touchet	Southeast WWD 2

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

**No observations were recorded in this category.**

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Continue measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> .
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system's total coliform monitoring plan is outdated and will be returned for updating. Each TCR monitoring site must have a valid address and a brief description of the physical location of the sample tap. The water system can update the required monitoring sites worksheet by logging into the Monitoring Plan Portal at <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a> . OPH Region 4 engineering staff can be reached by phone @ 337-262-5746 to discuss the review and approval of the monitoring plan.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE #1 - SOUTH	Finished Water Storage	From review, the ground storage tank should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the interior or exterior conditions of the ground storage tank. In addition to exterior cleaning and/or painting, the interior surfaces of the ground storage tank could benefit from an inspection.

FACILITY	CATEGORY	FINDINGS
GR003 - GROUND STORAGE #3 - NORTH	Finished Water Storage	From review, the ground storage tank should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the interior or exterior conditions of the ground storage tank. In addition to exterior cleaning and/or painting, the interior surfaces of the ground storage tank could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE #2 - MIDDLE	Finished Water Storage	From review, the ground storage tank should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the interior or exterior conditions of the ground storage tank. In addition to exterior cleaning and/or painting, the interior surfaces of the ground storage tank could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
HD001 - PRESSURE TANK	Finished Water Storage	From review, the hydropneumatic storage tank should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the interior or exterior conditions of the hydropneumatic tank. In addition to exterior cleaning and/or painting, the interior surfaces of the hydropneumatic tank could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
1113031- 001 - WELL #1 - SOUTH WELL	Source	The well's casing vent piping, discharge piping, and air release-vacuum relief valve piping are showing signs of heavy rusting, corrosion, and flaking paint. The well's casing vent piping, discharge piping, and air release-vacuum relief valve piping must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat, and paint the well's casing vent piping, discharge piping, and air release-vacuum relief valve piping to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1113031- 002 - WELL #2 - NORTH WELL	Source	The well's casing vent piping, discharge piping, and air release-vacuum relief valve piping are showing signs of heavy rusting, corrosion, and flaking paint. The well's casing vent piping, discharge piping, and air release-vacuum relief valve piping must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat, and paint the well's casing vent piping, discharge piping, and air release-vacuum relief valve piping to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

Office of Public Health • Acadian Region IV

825 Kaliste Saloom Rd • Brandywine 3 • Ste. 100 • Lafayette, Louisiana 70508  
Phone #: 337-262-5311 • Fax #: 337-262-5638 • [www.ldh.la.gov](http://www.ldh.la.gov)

"An Equal Opportunity Employer"

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap must be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. The pipe leading to the distribution system from the hydropneumatic tank and the high-speed service pumps will be exposed and a smooth nosed sample tap will be installed. This task must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers. OPH Region 4 engineering staff can be reached by phone @ 337-262-5746 to discuss requirements for the new POE sample tap.

#### **Written Response Required**

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water system was unable to provide the chemical analyses for the chosen method of treatment (list methods). All public water systems must use an approved chemical laboratory to perform all required chemical analyses using approved laboratory methodologies. Review the required instruction at <a href="http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf">http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf</a> and complete the required form located at <a href="http://ldh.la.gov/index.cfm/page/963">http://ldh.la.gov/index.cfm/page/963</a> under the heading Approved Laboratory Form (Instructions).

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE #1	Finished Water Storage	From review, the finished water storage facility should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR003 - GROUND STORAGE #3	Finished Water Storage	From review, the finished water storage facility should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE #2	Finished Water Storage	From review, the finished water storage facility should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE #2	Finished Water Storage	The screen for the ground storage tank overflow pipe is not adequate. The overflow pipe for the ground storage

		tank must be screened with twenty-four mesh, non-corrodible screen. Install a twenty-four mesh, non-corrodible screen on the ground storage tank overflow pipe to provide sanitary protection at all times.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE #1	Finished Water Storage	The screen for the ground storage tank overflow pipe is not adequate. The overflow pipe for the ground storage tank must be screened with twenty-four mesh, non-corrodible screen. Install a twenty-four mesh, non-corrodible screen on the ground storage tank overflow pipe to provide sanitary protection at all times.
FACILITY	CATEGORY	FINDINGS
GR003 - GROUND STORAGE #3	Finished Water Storage	The screen for the ground storage tank overflow pipe is not adequate. The overflow pipe for the ground storage tank must be screened with twenty-four mesh, non-corrodible screen. Install a twenty-four mesh, non-corrodible screen on the ground storage tank overflow pipe to provide sanitary protection at all times.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	There is no secondary containment provided for the chemical being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment for the Potassium Permanganate tank with a sufficient containment volume.
FACILITY	CATEGORY	FINDINGS
1113032-002 - WELL #2	Source	There is currently no pressure gauge installed on the discharge piping of the well. A pressure gauge must be installed on the discharge piping upstream of the check valve as a means to measure the actual operating head conditions. Install a pressure gauge on the well discharge piping to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1113032-003 - WELL #3 - SOUTHERNMOST WELL	Source	There is currently no pressure gauge installed on the discharge piping of the well. A pressure gauge must be installed on the discharge piping upstream of the check valve as a means to measure the actual operating head conditions. Install a pressure gauge on the well discharge piping to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. ### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	On 5/31/2018, LDH conducted a site visit to confirm that the significant deficiencies cited in a previous survey had been corrected. During the visit, a leak was noted on the discharge piping near a shut off valve in between the first

		and second storage tanks. Water systems that provide potable water to its customers must prevent any leakage within the distribution system by keeping it properly maintained at all times. It is imperative that these leaks be repaired immediately with minimum interruption of service to the customers.
--	--	--

June 6, 2018

Mr. Keith Lewing  
Village of Anacoco  
PO Box 280  
Anacoco, LA 71403

Re: Class I Sanitary Survey  
Village of Anacoco, Public Water System  
PWS ID LA1115001  
Vernon Parish

Dear Mr. Lewing:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 8, 2018 sanitary survey inspection of the public water supply system for Village of Anacoco (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

Name	Organization
Henri Hammond	LDH Region 6 Engineering Services
Jody Browning	Hornbeck Water System
Susan Robbins	Louisiana Rural Water Association

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There is a Cross Connection Control Ordinance and Backflow Prevention Program in place, but no records present identifying installed BFP devices, annual inspections, maintenance and testing. Water systems shall implement and enforce licensed installation, annual inspection & testing, repair and/or replacement of Backflow Prevention Devices to insure protection and safety of the potable water produced and distributed.
FACILITY	CATEGORY	FINDINGS
1115001-001 - WELL 1 SOUTH	Source	Signs of erosion were evident underneath and around the perimeter of Well #1 South. Site grading shall be maintained to correct and prevent erosion and eliminate pathways for well contamination.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Village of Anacoco has not validated the colorimeter. The water system shall obtain appropriate validation standards, measure and record validation checks at no more than 90-day intervals and retain these records. See Attachment #1
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND AT NORTH SITE	Finished Water Storage	Erosion was noted at the overflow pipe. The area surrounding the ground storage tank must be properly graded and maintained to prevent damage to the tank. See Attachment #2

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
PF001 - INLINE BOOSTER STATION	Pump/pumping facility and control	The pump was leaking considerably at the gland seal. The seal must be repaired or replaced. See Attachment #4 and #5
FACILITY	CATEGORY	FINDINGS
1115001-001 -	Source	The Well #1 has been OUT OF SERVICE since

WELL 1 SOUTH		02/01/2018 with decisions pending on whether or not servicing will be performed to restore the well. In the event the well will not be restored, Well #1 shall be plugged and abandoned by a licensed contractor to perform said work, per Louisiana Water Well Rules, Regulations and Standards. See Attachment #7 and #8
--------------	--	--

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Central Region VI  
Attn: Henri J. Hammond, E.I.  
5604-B Coliseum Blvd.  
Alexandria, Louisiana 71303

The following compliance history is provided for your information

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

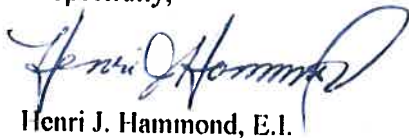

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at (318) 484-2163, [Henri.Hammond@LA.GOV](mailto:Henri.Hammond@LA.GOV).

Respectfully,

Henri J. Hammond, E.I.

Office of Public Health

CERTIFIED MAIL: 4016 2710 0000 4927 5593

October 16, 2018

Clarence Beebe  
Town of Hornbeck Water System  
PO Box 129  
Hornbeck, LA 71439

Re: Class I Sanitary Survey  
Town of Hornbeck Water System Public Water System  
PWS ID LA1115016  
Vernon Parish

Dear Mr. Beebe:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 4, 2018 sanitary survey inspection of the public water supply system for TOWN of HORNBECK WATER SYSTEM. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Rachael Bruce	LDH Engineering Region 6
Clarence Beebe	Town of Hornbeck
James Browning	Town of Hornbeck

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1085056-001 - PLAINVIEW WELL 1 PLAINVIEW ROAD	Source	The wells casing vent is not covered by a 24 mesh corrosion resistant screen. The well's casing vent must be covered by a 24 mesh corrosion resistant screen. See <b>Attachment #2</b>

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
GR002 - GROUND TANK AT PLAINVIEW PLANT	Finished Water Storage	The area around the storage tank is excessively wet. This area must be well drained to facilitate the rapid removal of water within a 50' radius of the storage tank. The ponding water presents a potential source of contamination and potentially compromise the integrity of the structure. See <b>Attachment #1</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The Ground Storage Tank at Plainview Plant is due for an inspection.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
10/04/2012	09/20/2012	Sanitary Survey, Finished	Significant	Finished Water Storage	EL001-EST @ H.M. STEVENS BLVD
<b>Comments:</b> The overflow pipe on the Stephens Blvd elevated tank is to have a screen over the end.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	The protective fencing surrounding the Well at Berry Street, the Well at 1st Street, and the Elevated Storage Tank at Stevens Blvd. was compromised. The sections of the fence that are intact have significant gaps near the ground that leave the water system facilities exposed. A continuous fence, capable of being locked, must be constructed to prevent trespassing, vandalism, and sabotage of the water system facilities. Please submit labeled photographic documentation of completed repairs.
FACILITY	CATEGORY	FINDINGS
Management	Security	The security fence surrounding the water system facilities (Wells located at Berry Street and 1st Street) was missing barbed wire. The fence shall be resistant to climbing and at least 6 feet high. Please make necessary adjustments to the security fence to prevent unauthorized access to the facility and submit labeled photographic documentation of completed modifications.
FACILITY	CATEGORY	FINDINGS
EL001 - EST @ H.M. STEVENS BLVD	Finished Water Storage	The security fence surrounding the water system facilities was missing barbed wire. The fence shall be resistant to climbing and at least 6 feet high. Please make necessary adjustments to the security fence to prevent unauthorized access to the facility and submit labeled photographic documentation of completed modifications.
FACILITY	CATEGORY	FINDINGS
EL002 - EST @ INDUSTRIAL PARK	Finished Water Storage	The security fence surrounding the water system facilities was missing barbed wire. The fence shall be resistant to climbing and at least 6 feet high. Please make necessary adjustments to the security fence to prevent unauthorized access to the facility and submit labeled photographic documentation of completed modifications.
FACILITY	CATEGORY	FINDINGS
1115019-005 - WELL #15 - BERRY STREET	Source	Holes in the casing seal have void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the casing seal to prevent bacteriological contamination.
FACILITY	CATEGORY	FINDINGS
1115019-003 - WELL #13 - 1ST STREET	Source	Soil is eroded at the well site. The holes must be filled with dirt and graded to drain away from the facility to prevent ponding of water and further erosion. The area around the well must be well drained and facilitate the rapid removal of water within a 50' radius of the well. The ponding water presents a potential source of

		contamination.
FACILITY	CATEGORY	FINDINGS
1115019-004 - WELL #14 - PUBLIC WORKS BUILDING	Source	The area around the well is excessively wet. The area around the well must be well drained and facilitate the rapid removal of water within a 50' radius of the well. The ponding water presents a potential source of contamination.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
GR002 - GST @ SOUTH PLANT	Finished Water Storage	The existing Point of Entry (POE) sample tap is not a smooth nozzle tap located after treatment and storage facilities, but prior to the first customer. The sample tap must be the smooth nozzle type.
FACILITY	CATEGORY	FINDINGS
EL002 - EST @ INDUSTRIAL PARK	Finished Water Storage	From review the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
EL001 - EST @ H.M. STEVENS BLVD	Finished Water Storage	From review the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - GST @ SOUTH PLANT	Finished Water Storage	From review the finished water storage facilities (ground storage tank) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - GST @ SOUTH PLANT	Finished Water Storage	Soil is eroded at the Ground Storage overflow splash pad. The hole must be filled with dirt and graded to drain away from the facility to prevent ponding of water and further erosion.
FACILITY	CATEGORY	FINDINGS
EL001 - EST @ H.M. STEVENS BLVD	Finished Water Storage	The elevated tower is not equipped with an acceptable smooth-nosed sampling tap. The elevated tower must be equipped with a smooth-nosed sampling tap to facilitate bacteriological and chemical analyses, when needed.

FACILITY	CATEGORY	FINDINGS
EL002 - EST @ INDUSTRIAL PARK	Finished Water Storage	The elevated tower is not equipped with an acceptable smooth-nosed sampling tap. The elevated tower must be equipped with a smooth-nosed sampling tap to facilitate bacteriological and chemical analyses, when needed.
FACILITY	CATEGORY	FINDINGS
GR002 - GST @ SOUTH PLANT	Finished Water Storage	The Ground Storage Tank did not have an overflow pipe. All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.
FACILITY	CATEGORY	FINDINGS
EL001 - EST @ H.M. STEVENS BLVD	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with a 4 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
1115019-004 - WELL #14 - PUBLIC WORKS BUILDING	Source	The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
1115019-004 - WELL #14 - PUBLIC WORKS BUILDING	Source	The well is not equipped with a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained. A check valve, a pressure gauge, a means of measuring flow, and smooth nosed sampling tap must be provided.
FACILITY	CATEGORY	FINDINGS
1115019-006 - WELL #16 - MECHANIC STREET	Source	The well's base plate supporting the pump, and the motor cage are showing signs of rust, corrosion and flaking paint. The pieces must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP004 - SOUTH PLANT @ SARTOR STREET	Treatment	Chlorine cylinders were restrained with a single chain. It is recommended to chain each cylinder individually to prevent upset.
FACILITY	CATEGORY	FINDINGS
TP001 - NORTH PLANT @ 1ST STREET	Treatment	Chlorine cylinders were restrained with a single chain. It is recommended to chain each cylinder individually to prevent upset.
FACILITY	CATEGORY	FINDINGS
TP001 - NORTH PLANT @ 1ST STREET	Treatment	The chlorine gas cylinders are not properly secured. Full and empty cylinders of chlorine gas must be restrained in position at all times to prevent upset. Properly secure all chlorine gas cylinders.
FACILITY	CATEGORY	FINDINGS
TP004 - SOUTH PLANT @ SARTOR STREET	Treatment	The chlorine gas cylinders are not properly secured. Full and empty cylinders of chlorine gas must be restrained in position at all times to prevent upset. Properly secure all chlorine gas cylinders.

Dear Mrs. Duvalle:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 10, 2018 sanitary survey inspection of the public water supply system for TOWN of ROSEPINE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

**Name**

Danny Mortimer  
Mike Numbers

**Organization**

OPH Region VII Engineering  
Town Of Rosepine Water System

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	THE VINES AND TREES IN THE FENCING OF ALL PARTS OF THE SYSTEM NEED TO BE CLEARED AND REMOVED TO PROTECT THE INTEGRITY OF THE FENCE.
FACILITY	CATEGORY	FINDINGS
1115028-005 - WELL 5 - LEWIS ROAD	Source	THE HOLE FROM PREVIOUS WORK AROUND THE WELL NEEDS TO BE FILLED AND GRADED TO PREVENT POSSIBLE CONTAMINATION.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
1115028-001 - WELL 1 - EAST FIRST ST	Source	WELL #1 NEEDS A PRESSUE GAUGE AND A FLOW METER.
FACILITY	CATEGORY	FINDINGS
1115028-003 - WELL 3 - RUTH ST	Source	WELL #3 NEEDS A WORKING PRESSURE GAUGE.
FACILITY	CATEGORY	FINDINGS
1115028-004 - WELL 4 - RUTH ST	Source	WELL #4 NEEDS A PRESSURE GAUGE AND A FLOW METER.
FACILITY	CATEGORY	FINDINGS
1115028-005 - WELL 5 - LEWIS ROAD	Source	WELL #5 NEEDS A WORKING PRESSURE GAUGE.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK #1	Finished Water Storage	THE LADDER AT GROUND SORAGE TANK #1 NEEDS A LADDER GUARD.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE TANK #2	Finished Water Storage	THE LADDER AT GROUND SORAGE TANK #2 NEEDS A LADDER GUARD.

LDH recommends that all storage facilities are inspected, cleaned, and painted every 5 years.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
VILLAGE of SIMPSON WATER SYSTEM Public Water System  
PWS ID LA1115032  
VERNON Parish

Dear Mr. Brinkley:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 29, 2018 sanitary survey inspection of the public water supply system for VILLAGE of SIMPSON WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - DISINFECTION	Treatment	Chlorine bottles should have separate storage chains in use and for storage.

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	<p>All finished water storage tanks shall be tightly covered and of watertight construction and made of concrete, steel or other materials approved for this purpose by the state health officer. When located wholly or partly below ground, such storage basins shall be of corrosion resistant materials.</p> <p>The Ground storage tank has a ½ inch opening on the roof of the tank. The system must have the tank cleaned, inspected, repaired, and painted.</p> <p><b>See Attachment #4</b></p>
FACILITY	CATEGORY	FINDINGS
1115047-002 - WELL BY PUMP HOUSE (WEST)	Source	<p>The well has an existing uneven concrete slab due to erosion. The well shall be provided with a watertight cover constructed of concrete at least 4 inches thick and 2.5 feet in all directions. The cover must be graded to drain away from casing.</p> <p><b>See Attachment #2 and #1</b></p>
FACILITY	CATEGORY	FINDINGS
1115047-003 - WELL BY FIRE STATION (EAST)	Source	<p>The well has an existing uneven concrete slab due to erosion. The well shall be provided with a watertight cover constructed of concrete at least 4 inches thick and 2.5 feet in all directions. The cover must be graded to drain away from casing.</p> <p><b>See Attachment #3</b></p>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	<p>Lab results for 2/17-2/18 were not on file at the system. Bacteriological test and chemical test results reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, the test results were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH</p>
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	<p>The water system did not have the calibration standards to properly validate the bench top colorimeter. A low and high range set of calibration standards should be obtained.</p>
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	<p>The water system has no records of validation for the bench top colorimeter. A validation log shall be created and made available for review during inspections and sanitary surveys of the public</p>

		water system performed by LDH.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	TCR-005. TCR-006, ACR-007 are not suitable sample taps which draw water directly from the mains or the service lines. The sample taps are threaded faucets located on the outside of residences. The water supply must replace all threaded taps with smooth nozzle taps which draw water directly from the mains or the service lines. <b>See Attachment #7 and #6</b>
FACILITY	CATEGORY	FINDINGS
TP001 - DISINFECTION	Treatment	There is no secondary containment provided for the liquid chemical being used for water treatment. Secondary containment prevents spillage or accidental drainage of chemicals due to equipment and primary containment failure. The system shall provide secondary containment for the liquid chemical being used for water treatment. <b>See Attachment #5</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	From review the finished water storage facilities (elevated towers, ground storage tanks, and hydro pneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces

		of finished water storage facilities could benefit from an inspection.

Re: Class I Sanitary Survey  
Fort Polk North Housing Water System Public Water System  
PWS ID LA1115087  
Vernon Parish

Dear Mr. Raisor:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 20, 2018 sanitary survey inspection of the public water supply system for Fort Polk North Housing Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

<b>Name</b>	<b>Organization</b>
Henri Hammond	LDH Region 6 Engineering Services
Rachael Bruce	LDH Region 6 Engineering Services
Brad Day	American Water Military Group
Anthony Harper	American Water Military Group
Noah Belcher	American Water Military Group
Justin Perkins	American Water Military Group

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
1115087-001 - WELL 15D V 515 SOUTH	Source	The well pad showed signs of erosion. Corrective action must be taken to prevent further erosion. See Attachment #1

### Deficiencies

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP002 - TREATMENT PLANT	Treatment	<p>There was an exposed opening in the chemical storage tank. The opening must be covered or screened to prevent deterioration of the product or entry of undesired matter.</p> <p>The chemical feed pump was not properly secured to the tank. The chemical feed pump must be secured to the tank to prevent damage to the pump. See Attachment #2</p>

### Written Response Required

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Central Region VI  
Attn: Henri Hammond, E.I.  
5604-B Coliseum Blvd.  
Alexandria, Louisiana 71303

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

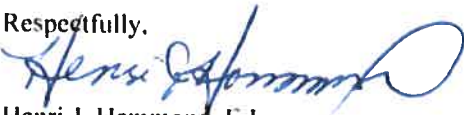

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at (318) 484-2163, [Henri.Hammond@LA.GOV](mailto:Henri.Hammond@LA.GOV).

Respectfully,

Henri J. Hammond, E.I.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

There are no unresolved significant deficiencies discovered from previous surveys.

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	The injector pump for the poly phosphate is not secured. The injector pump should be secured to prevent equipment and/or dosing failure.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water system is not equipped with a source of dedicated standby power. The water system should explore every effort to obtain dedicated standby power.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The high service pumps and piping are showing signs of rust, corrosion and flaking paint. The pumps and piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	Excessive vegetation is growing on the fence. Please trim vegetation to reduce hazard to security fence and maintain to prevent future growth.

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was noted during the sanitary survey that the water system did not keep a customer complaint log. Effective August 1, 2018, community water systems are required by Act 292 to establish and maintain records of customer complaints. The aspects of the log include time and date of the complaint, location, the name of the customer or user, a brief description, and the corrective actions implemented to resolve the complaint. These records must be maintained by the water system for a minimum of 5 years and must be made available for review by LDH upon request. These records can be vital to identify problem areas in your distribution system. They can also support efforts to seek funding for various issues that may plague the water system.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	From review the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water

		storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
TP001 - DISINFECTION WELL 1	Treatment	The ventilating fan is not operational when the well is not running. The chlorine room must be equipped with a working ventilating fan at all times.
FACILITY	CATEGORY	FINDINGS
TP002 - AQUA MAG	Treatment	There is no secondary containment provided for the poly phosphate being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment for the phosphate storage tank with a sufficient containment volume.
FACILITY	CATEGORY	FINDINGS
1115090-001 - WELL 1	Source	The air release-vacuum relief valve is not covered by a 24 mesh corrosion resistant screen. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1115090-001 - WELL 1	Source	The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
1115090-001 - WELL 1	Source	The well is not equipped with a check valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained. A check valve, a pressure gauge, a means of measuring flow, and smooth nosed sampling tap must be provided.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management	It was discovered upon inspection that recent chlorine dosing has doubled in volume in order to meet disinfectant residual demand. It is

	and Operation	recommended that the system purchase equipment (Hach DR900 or SL1000) to test and evaluate raw water changes.

Slagle, LA 71475

Re: Class I Sanitary Survey  
East Central Vernon Water System  
PWS ID LA1115117  
Vernon Parish

Dear Mr. Lewis:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 17, 2018 sanitary survey inspection of the public water supply system for East Central Vernon Water System (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### **Parties Present**

<b>Name</b>	<b>Organization</b>
James Soileau	LDH-OPH Region 7 Engineering Services
Kyle Marker	East Central Vernon Water

#### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
10/06/2015	10/16/2015	Sanitary Survey, Finished	Minor	Finished Water Storage	GR001-GROUND TANK LACAMP SITE
<b>Comments:</b> The overflow of the ground storage tank at the La Camp booster station does not have a screen. The overflow pipe is to be screened with twenty-four mesh non-corrodible screen.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
10/06/2015	10/16/2015	Sanitary Survey, Finished	Minor	Finished Water Storage	GR002-GROUND TANK COLD SPRINGS SITE
<b>Comments:</b> The overflow of the ground storage tank at the Cold Springs booster station does not have a screen. The overflow pipe is to be screened with twenty-four mesh non-corrodible screen.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
10/06/2015	10/16/2015	Sanitary Survey, Finished	Minor	Source	1115117-001-WELL AT HICKS HWY 121
<b>Comments:</b> The lens on the pressure gauge on the Hicks well is too clouded with sediment to read the gauge. The lens is to be replaced.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
10/06/2015	10/16/2015	Sanitary Survey, Finished	Minor	Source	1115117-002-WELL AT SLAGLE HWY 8
<b>Comments:</b> The pressure gauge on the Slagle well is not working. The pressure gauge is to be repaired or replaced.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked. The La Camp booster station had a sizeable hole under the fence that a person could crawl under. The hole should be filled to prevent unauthorized access into the booster station.

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system did not have a formal cross connection control program in place. The water system shall implement a formal cross connection control program. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1115117-003 - WELL AT KURTHWOOD HWY 117	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. The top of the well casing was separated from the side portion and should be sealed. The air release valve on the discharge piping did not have the proper sized screen on it. A 24-mesh screen should be added. These could provide a pathway for contamination into the well and the discharge piping.
FACILITY	CATEGORY	FINDINGS
1115117-001 - WELL AT HICKS HWY 121	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. The well casing was chipped and the top of the casing was pushed up a significant amount. The screen on the air vent was not 24 mesh. The screen should be replaced with a 24 mesh screen and the top of the casing should be made flush to the side of the casing.
FACILITY	CATEGORY	FINDINGS
1115117-002 - WELL AT SLAGLE HWY 8	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. The well top well top was raised above name casing, creating a gap. The space between the well top and the casing should be sealed. The screen was not 24-mesh and should be replaced with the appropriate size. These could provide a pathway for contamination into the well.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	General site cleanup is recommended at the Cold Springs Booster Station, as there is excess parts by the storage tank. The wells at the Kurthwood, Slagle, and Hicks site all had mud dobber nests under the metal support plate for the pumps, and should be cleaned off.
FACILITY	CATEGORY	FINDINGS
PF002 - VFD AT COLD SPRINGS BOOSTER STATION	Pump/pumping facility and control	The light was out in the pump control room. The light should be replaced. Pump stations shall be adequately lighted throughout.
FACILITY	CATEGORY	FINDINGS
PF001 - VFD AT LACAMP BOOSTER STATION	Pump/pumping facility and control	The light was out in the pump control room. The light should be replaced. Pump stations shall be adequately lighted throughout.

Re: Class I Sanitary Survey  
ENON QUICK SHOP LLC Public Water System  
PWS ID LA2117093  
WASHINGTON Parish

Dear Mr. Hennick, Sr.:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 21, 2018 sanitary survey inspection of the public water supply system for ENON QUICK SHOP LLC (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

Office of Public Health • Southeast Region IX

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There was 1 hose bib connection in the well house at the time of inspection. The tap shall be replaced with a smooth type one or a vacuum type one. <b>See Attachment #1</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	Electronic wirings at the well site were not in a conduit at the time of inspection. All electrical wiring needs to be properly protected in a conduit where applicable. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	The condition of the interior of the pressure tank was unknown, however, severe signs of rust were shown on the exterior of the tank. The tank should be evaluated and then repainted or replaced if necessary. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT #1	Treatment	There was no secondary containment for the sodium hypochlorite storage at the time of inspection. A receiving basin capable of receiving accidental spills or overflows must be provided. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
2117125-001 - PRIMARY WELL	Source	There was no flow meter on the well discharge pipe at the time of inspection. A flow meter is required for the well discharge pipe.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above,

**written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT #1	Treatment	The tap before the second storage tank was threaded type at the time of inspection. Please replace the threaded tap with a smooth-nosed tap or install a vacuum breaker. <b>See Attachment #3</b>

A high chlorine residual around 4 ppm was recorded on the chlorine residual report at the time of inspection. It is highly recommended the operator be familiar with dosage calculation and maintain a chlorine residual more than 0.5 ppm daily and less than 4 ppm on annual average.

The well house was filled with stuff at the time of inspection. It is highly recommended that the well house is kept clean to provide easy access of operation and maintenance.

**Written Response Required**

WASHINGTON Parish

Dear Ms. Bathla:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 14, 2018 sanitary survey inspection of the public water supply system for S AND P TRUCK STOP (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

Name	Organization
Brian Suberbielle	LDH/OPH Region II Engineer
Mary Adams	Varnado Water Works

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
02/26/2014	02/26/2014	Formal Enforcement	Significant	System Management and Operation	Management
<b>Comments:</b> No chlorine records are available. Daily chlorine residuals shall be taken and recorded on the DHH approved sheets and records maintained for ten years per Emergency Rule dated November 6, 2013.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
02/26/2014	02/26/2014	Formal Enforcement	Significant	Source	2117181-001-K & T SPUR #3 WELL
<b>Comments:</b> There is no raw water sample tap nor POE sample tap on the finished water. Smooth Sample taps shall be provided for the sampling of raw water and finished water and located at sufficient height above finish grade so as to prevent water from splashing onto the sample taps.					
Visit Date	Notify Date	Reason	Severity	Category	Facility

**Comments:** Daily chlorine residual test results will be maintained on site. Copies of the DHH form were provided.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The S & P Truck Stop Water System is not being operated by a person whose competency has been duly certified by the state health officer for the type of facility and the population it serves. All water systems are required to have a certified operator to conduct the daily duties to maintain the system; e.g.: adjusting chemical feed rates based on demand, operating chemical feed pumps, and exercising valves.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system did not have a cross connection control ordinance. A formal cross connection control plan is required. Each water utility shall have a program conforming to state requirements to detect and eliminate cross connections. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. An adopted and

		signed cross connection control plan shall be provided to this office.
--	--	--

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of the survey the facility could not produce the daily chlorine residual results, bacteriological results, chemical records, lead & copper reports and Consumer confidence reports for all of the required time frame that records are required to be kept. The chlorine residuals were not recorded every day. Chlorine residuals shall be taken daily and records maintained on the form approved by the state health officer and maintained for a period of three years. The chlorine residual should be taken at the entry point of the distribution system and point of maximum residence time.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the inspection, the Point of Entry sample tap at the well site included a two tap configuration consisting of two taps sharing a T connection. The water system must provide a single smooth nosed tap at the Point of Entry on a dedicated connection. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT #1	Treatment	During the inspection, the chlorine solution tank was not labeled. Tanks shall be clearly labeled with the name of the chemical contained. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT #1	Treatment	No secondary spill protection was provided for the chlorine solution tank. Solution tanks shall be located and protective curbing provided so that chemicals from equipment

		failure, spillage or accidental drainage shall not enter the water in conduits, treatment or storage basins. See Attachment #1
FACILITY	CATEGORY	FINDINGS
2117181-001 - K & T SPUR #3 WELL	Source	At the time of the survey, it was noted that the well did not have a pressure gauge or a flow meter. The discharge piping shall be equipped with a pressure gauge and a means of measuring flow. See Attachment #3
FACILITY	CATEGORY	FINDINGS
2117181-001 - K & T SPUR #3 WELL	Source	It was observed that the well did not have a vent. All potable water well casings shall be vented to the atmosphere. The open end of the vent must be screened and must terminate in the downward position at a minimum height of 24 inches above the ground/slab.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is strongly recommended that the water system develop and implement a written flushing program. The water distribution system should be flushed as necessary to reduce stagnant water and sediment build-up.

		Unidirectional and directional flushing are more effective than spot flushing.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Security	The water well, disinfection system and storage tank were found located in a shaded open area at the time of inspection. All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked and areas shall be locked when unattended. The fence shall be resistant to climbing and at least 6 feet high. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There was 1 threaded tap installed downstream the storage tank which was slightly leaking at the time of inspection. The leak shall be repaired and the tap shall be replaced with a smooth type one or vacuum type one. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
TP001 - LIL LANDERS BAR	Treatment	The sodium hypochlorite storage tank was not labeled to identify its contents at the time of inspection. A label shall be added. <b>See Attachment #5</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
BL001 - STORAGE	Finished Water Storage	The condition of the interior of the pressure tank was unknown, however, severe signs of rust were shown on the exterior of the tank. The tank should be evaluated and then repainted or replaced if necessary. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
TP001 - LIL LANDERS BAR	Treatment	There was no secondary containment for the sodium hypochlorite storage at the time of inspection. A receiving basin capable of receiving accidental spills or overflows must be provided. <b>See Attachment #5</b>
FACILITY	CATEGORY	FINDINGS
2117184-001 - LIL LANDERS BAR WELL #1	Source	There was no flow meter on the well discharge pipe at the time of inspection. A flow meter is required for the well discharge pipe. <b>See Attachment #2</b>

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - LIL LANDERS BAR	Treatment	The Stenner chemical feeder pump was operating at 100% of its range at the time of inspection, which appeared to be undersized. It is recommended to replace the pump if budget allows.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Dear Mr. Pigott:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 3, 2018 sanitary survey inspection of the public water supply system for WARNERTON QUICK STOP (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

Dear Mayor Alexander:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 22, 2018 sanitary survey inspection of the public water supply system for COTTON VALLEY WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## Parties Present

### **Name**

Autumn Permenter  
George Shaw Jr.

### **Organization**

LDH-OPH Engineering District 4  
Cotton Valley Water System

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
1119004-002 - WELL #02, NORTH WELL @ NORTH PLANT	Source	The existing flow meter is not functioning properly. The well must be equipped with a means of measuring flow.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	A caution/warning sign should be installed on the outside of the chlorine building. The existing sign on the fence is faded and may not appropriately caution against the presence of chlorine.  The vegetation at the plant site was overgrown. Area should be mowed and maintained on an appropriate schedule.

FACILITY	CATEGORY	FINDINGS
EL001 - EST #01, MAIN STREET	Finished Water Storage	Ladder guards and safely located entrance hatches shall be provided where applicable.
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN STREET PLANT	Treatment	Chlorine cylinders were restrained with a single chain. It is recommended to chain each cylinder individually to prevent upset.

Dear Ms. Hawkins:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 21, 2018 sanitary survey inspection of the public water supply system for GILARK WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	High Service Pumps and check valves are showing signs of corrosion, rust, and flaky paint. Pumps and check valves should be cleaned and coated to prevent further deterioration which may lead to contamination of the water supply or failure of the pump.

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1119012-001 - WELL #1	Source	The pipe used to support the well discharge piping and valves is resting on a rotting, deteriorating piece of wood. The well discharge piping must be adequately supported to prevent physical damage. Install a new pipe support at the location of the existing base plate and concrete foundation.
FACILITY	CATEGORY	FINDINGS
1119012-003 - WELL #3	Source	Holes in the back of the electrical box create a void and are not properly sealed. The current electrical box has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the electrical box to prevent bacteriological contamination.
FACILITY	CATEGORY	FINDINGS
1119012-004 - WELL #4	Source	Holes in the back of the electrical box create a void and are not properly sealed. The current electrical box has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the electrical box to prevent bacteriological contamination.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND TANK	Finished Water Storage	The finished water storage facility should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND TANK	Finished Water Storage	The overflow pipe and tank drain pipes are not screened. The overflow pipe and tank drain must be screened with 24 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
TP002 - NEW MAIN PLANT 2007	Treatment	Chemical feed pump for Potassium Permanganate is not secured. Pump should be secured to reduce hazard of chemical spill and equipment failure. The suction line for Potassium Permanganate is not sealed. The

		suction line should be sealed to avoid entrance of foreign chemicals or objects which could contaminate the chemical supply.
FACILITY	CATEGORY	FINDINGS
1119012-003 - WELL #3	Source	The well pressure gauge is not functional. The well discharge piping must be equipped with a working pressure gauge.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP002 - NEW MAIN PLANT 2007	Treatment	Chlorine cylinders were restrained with a single chain. It is recommended to chain each cylinder individually to prevent upset.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

No unresolved observations were recorded in this category.

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	The security fence surrounding the water system facilities was missing barbed wire at the Treatment Plant site and the Ball Park Well site. The fence shall be resistant to climbing and at least 6 feet high. Please make necessary adjustments to the security fence to prevent unauthorized access to the facility and submit labeled photographic documentation of completed modifications.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1119013-002 - WELL #2 (BALL FIELD)	Source	<p>Holes in the back of the electrical box create a void and are not properly sealed. The current electrical box has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the electrical box to prevent bacteriological contamination.</p> <p>The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.</p>
FACILITY	CATEGORY	FINDINGS
1119013-003 - WELL #3 (NEW WELL @ PLANT)	Source	The wells casing vent is not covered by a 24 mesh corrosion resistant screen. The wells casing vent must be covered by a 24 mesh corrosion resistant screen.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TANK	Finished Water Storage	Soil is eroded at the overflow outlet for the Elevated Tank. The hole must be filled with dirt and graded to drain away from the riser to prevent ponding of water and further erosion which may compromise the structural integrity of the Elevated Tank.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TANK	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with a 4 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
1119013-003 - WELL #3 (NEW)	Source	The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated

WELL @ PLANT)		and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
------------------	--	---

Re: Class I Sanitary Survey  
SALT WORKS WATER SYSTEM Public Water System  
PWS ID LA1119024  
WEBSTER Parish

Dear Mr. Lott:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the September 21, 2018 sanitary survey inspection of the public water supply system for SALT WORKS WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### **Parties Present**

<b>Name</b>	<b>Organization</b>
Autumn Permenter	LDH-OPH Engineering District 4
Ken Lott	Representative

### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The current Monitoring Plan for the water system needs to be updated. The Point of Entry sample location is currently shown at the Well site (416 Buttonwood Road) and should be shown at the treatment plant site after treatment and storage facilities, but prior to the first customer. All public water systems must have a monitoring plan that includes all required routine compliance samples to be collected for the monitoring period. Every sampling site must have the correct address and description of the location. Update and re-submit the Monitoring Plan for LDH review and approval. The Monitoring Plan Portal for the public water system can be found on LDHs website at: <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a>
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The Point of Entry sample tap located within the distribution system pipe gallery is not equipped with an approved sample tap. The point of entry tap must be a smooth nozzle tap located after treatment and storage facilities, but prior to the first customer. The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap.
FACILITY	CATEGORY	FINDINGS
Management	Other	At the Well Site, the plank of wood securing the junction box for the electrical wiring is rotting and deteriorating. Junction box should be properly secured to prevent failure of electrical service to well.
FACILITY	CATEGORY	FINDINGS
Management	Security	Excessive vegetation is growing on the fence. Please trim vegetation to reduce hazard to security fence and maintain to prevent future growth.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	In the piping gallery, the High Service Pumps and piping are showing signs of corrosion, rust, and flaky paint. Pump motors and piping should be cleaned and coated to prevent further deterioration which may lead to contamination of the water supply or failure of the pump.
FACILITY	CATEGORY	FINDINGS
1119024-001 - WELL #1	Source	A conduit pipe of unknown origin in the ground at the Well Pad is a conduit for storm water runoff and potential contaminates from site. Pipe must be properly plugged and abandoned or removed. The wiring entering the casing seal creates a void. The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the casing seal to prevent bacteriological contamination.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND TANK	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with 24 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT HWY 371	Treatment	The chlorine building did not have ventilation. Where chlorine gas is used, the room shall be constructed to provide the following: each room shall have a ventilating fan with capacity which provides one complete air change per minute when the room is occupied.
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT HWY 371	Treatment	The chlorine gas room did not have switches for a fan or light. The chlorine gas room must have separate switches for the fan and lights located outside of the chlorine room. The light in the chlorine room is currently not operational. Install separate switches outside of the chlorine room to control the lighting and ventilating fan.
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT HWY 371	Treatment	The chlorine gas cylinders does not have an automatic switch-over mechanism, which presents the possibility of interrupted disinfection. The switchover mechanism must be properly installed to assure continuous disinfection. Please provide labeled photographic documentation of completed modifications.
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT HWY 371	Treatment	The current enclosure for chlorine room does not have an air intake or exhaust louvers. The chlorine gas room must be constructed to provide louvers for air intake and exhaust which facilitate airtight closure. Air intake louvers must be installed near the ceiling.
FACILITY	CATEGORY	FINDINGS
1119024- 001 - WELL #1	Source	The well casing and discharging piping was wrapped with loose well pump wires. Additionally, it was reported that sand entering the bottom of the well casing during a pump repair is preventing the well pump from being returned to its original operating depth within the casing. The well casing and interior screening should be evaluated and repaired to return the well pump to original operating depth or consideration and efforts should be made to pursue a new well site. Additionally, the loose well pump wires should be secured or removed to prevent physical damage of the pump or well piping.
FACILITY	CATEGORY	FINDINGS
1119024- 001 - WELL #1	Source	<p>The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.</p> <p>The insulation and wrapping covering a portion of the well discharge piping is deteriorating and should be replaced to prevent corrosion and molding that could lead to a potential source of contamination on the piping.</p>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	<p>The chlorine room does not display proper warning signs on the outside of the structure. Consideration must be given to the safety of water plant personnel and visitors. Please install appropriate warning signs for chlorine gas.</p> <p>The chlorine feed room is not equipped with an inspection window. A shatter resistant inspection window is required where chlorine gas is fed.</p>
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT HWY 371	Treatment	Chlorine cylinders were restrained with a single chain. It is recommended to chain each cylinder individually to prevent upset.
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT HWY 371	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	The fence at the 219 Thomas Street site is falling and unsecured at the Well #2 site. Fence should be repaired and area secured.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	The bolts on the Ground Storage Tank (GST) are showing signs of rust and corrosion. The GST must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
1119025-001 - WELL #1, OFFICE	Source	<p>The well casing vent is not covered by a 24 mesh corrosion resistant screen. The well casing vent must be covered by a 24 mesh corrosion resistant screen.</p> <p>The wiring entering the casing seal creates a void. The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the casing seal to prevent bacteriological contamination.</p> <p>Vegetation is growing on well casing and should be removed to prevent bacteriological contamination into the well source.</p>
FACILITY	CATEGORY	FINDINGS
1119025-003 - WELL #3, THOMAS AND HWY	Source	The well is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve. The sample tap must be the smooth nozzle type.
FACILITY	CATEGORY	FINDINGS
1119025-003 - WELL #3, THOMAS AND HWY	Source	<p>The wiring entering the casing seal creates a void. The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the casing seal to prevent bacteriological contamination.</p>
FACILITY	CATEGORY	FINDINGS
1119025-002 - WELL #2, ELEVATED TANK	Source	<p>There is a hole in the screen of the well casing vent. The well casing vent must be covered by a 24 mesh corrosion resistant screen.</p> <p>The well has an existing cracked slab. The well shall be provided with a watertight cover constructed of concrete at least 4 inches thick and 2.5 feet in all directions. The cover must be graded to drain away</p>

		<p>from casing. Repair the cracked concrete slab to prevent any potential contamination into the well.</p> <p>Pipe of unknown origin in the ground at the well is a conduit for storm water runoff and potential contaminates from site. Pipe must be properly plugged and abandoned.</p>
--	--	---

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	<p>At Well Site #3, the plank of wood securing the junction box for the electrical wiring is rotting and deteriorating. Junction box should be properly secured to prevent failure of electrical service to well.</p> <p>The electrical box at Well Site #1 is corroded and rusted. Please make necessary repairs/replacement.</p> <p>There was significant vegetation growth at the Elevated Tank plant site. Trim vegetation inside the fence and perform regular maintenance of the area.</p>
FACILITY	CATEGORY	FINDINGS
PF001 - PUMP FACILITY	Pump/pumping facility and control	Pumps and check valves are showing signs of corrosion, rust, and flaky paint. Pumps and check valves should be cleaned and coated to prevent further deterioration which may lead to contamination of the water supply or failure of the pump.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TANK	Finished Water Storage	<p>The elevated tank is showing signs of rust, corrosion, and flaky painting. The tank must be cleaned, treated, and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.</p> <p>The finished water storage facility should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.</p>
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	The finished water storage facility should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE	Finished Water Storage	The overflow for the elevated storage tank does not discharge over an appropriate splash plate or drainage inlet structure. The overflow must discharge to an appropriately sized splash plate or

TANK		drainage inlet structure to prevent further erosion around the foundation of the tower that could compromise the structural integrity.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	The overflow pipe and tank drain pipes are not screened. The overflow pipe and tank drain must be screened with 24 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
1119025-002 - WELL #2, ELEVATED TANK	Source	The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. #### Deficiencies

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND TANK	Finished Water Storage	The finished water storage facility should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND TANK	Finished Water Storage	The overflow pipe terminates at the top of the Ground Storage Tank. The overflow pipe should be extended to an elevation between 12 and 24 inches above the ground surface and discharge over a drainage inlet structure or splash pad.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND TANK	Finished Water Storage	The tank drain pipes are not screened. The tank drain must be screened with 24 mesh non-corrodible screen and installed to provide protection at all times.

FACILITY	CATEGORY	FINDINGS
1119030-001 - WELL #2, WEST WELL	Source	The well is not equipped with a means of measuring flow. A flow meter or alternate means of measuring flow shall be provided.
FACILITY	CATEGORY	FINDINGS
1119030-002 - WELL #1, EAST WELL	Source	The well is not equipped with a means of measuring flow. A flow meter or alternate means of measuring flow shall be provided.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND TANK	Finished Water Storage	Ladder guards and safely located entrance hatches shall be provided where applicable.
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT THOMASVILLE RD	Treatment	<p>The chlorine gas cylinders are not properly secured. Full and empty cylinders of chlorine gas must be restrained in position at all times to prevent upset. Properly secure all chlorine gas cylinders. Chlorine gas cylinders should be chained to wall individually.</p> <p>The chlorine feed room is not equipped with an inspection window. A shatter resistant inspection window is required where chlorine gas is fed.</p> <p>The chlorine room does not contain a ventilating fan. The chlorine room must be equipped with a working ventilating fan to ensure worker safety.</p> <p>A caution/warning sign should be installed on the outside of the</p>

		chlorine building to appropriately caution against the presence of chlorine.

WEBSTER Parish

Dear Mr. Desoto:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 29, 2018 sanitary survey inspection of the public water supply system for UNION GROVE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### **Parties Present**

<b>Name</b>	<b>Organization</b>
Autumn Permenter	LDH-OPH Engineering District 4
Laverlan Desoto	Union Grove Water System
Archie Robinson	Union Grove Water System

### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1119031-003 - WELL #3 MAIN PLANT	Source	<p>The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.</p> <p>Holes in the back of the electrical box create a void and are not properly sealed. The current electrical box has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the electrical box to prevent bacteriological contamination.</p>
FACILITY	CATEGORY	FINDINGS
1119031-004 - WELL NO 4 GEORGIA DR	Source	<p>The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.</p> <p>Holes in the back of the electrical box create a void and are not properly sealed. The current electrical box has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the electrical box to prevent bacteriological contamination.</p> <p>The pipe used to support the well discharge piping and valves is twisting out of place and no longer providing appropriate support. The well discharge piping must be adequately supported to prevent physical damage. Please repair or replace the pipe support at the location of the existing base plate and concrete foundation.</p>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written

**confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	<p>The chlorine building does not have a warning sign installed and does not appropriately caution against the presence of chlorine. A caution/warning sign should be installed on the outside of the chlorine building.</p> <p>The chlorine feed room is not equipped with an inspection window. A shatter resistant inspection window is required where chlorine gas is fed.</p>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	Piping within the pipe gallery is showing signs of rust, corrosion and flaking paint. The piping must be cleaned, treated and painted to resist further corrosion.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII  
Attn: Autumn Permenter, PE  
1525 Fairfield Ave. Room 569  
Shreveport, Louisiana 71101

The following compliance history is provided for your information

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

Violation Number	Violation Date	Analyte	Compliance Period
7005705	05/25/2017	LEAD & COPPER RULE	01/01/2014 - 12/31/2016

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

Violation Number	Violation Date	Violation Type	Compliance Period
7005706	05/25/2017	OCCT/SOWT RECOMMENDATION/STUDY (LCR)	01/01/2014 - 12/31/2016

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at (318) 676-7477 or Autumn.Permenter@la.gov.

Respectfully,

Autumn Permenter, P.E.  
District Engineer – District IV

<b>Comments:</b> The air release valve was not screened. There should be a screen.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of inspection of the Treatment Plant at the Hunters Run Well site, the chlorine pump was not working and the resulting rotameters feed rate was reading zero pounds/24 hours of chlorine gas. This reading was taken as the well was pumping water. A chlorine residual was taken at POE and it registered a 0.01 mg/L.
FACILITY	CATEGORY	FINDINGS
Management	Other	During the survey, it was observed that the flushing assembly located at the Sunrise Well site was eroding the surrounding area. It is recommended that measures should be taken to remedy the eroded area and prevent future erosion. <b>See Attachment #15</b>
FACILITY	CATEGORY	FINDINGS
Management	Other	The altitude valve at the Poplar Grove Elevated Tank was observed to have a significant leak. All potable water systems shall be designed, constructed

		and maintained to prevent the leakage of water due to defective materials, improper jointing, corrosion, settling, impacts, freezing, or other causes. The water system shall replace the altitude valve. See <b>Attachment #16</b>
FACILITY	CATEGORY	FINDINGS
EL001 - WBR PUBLIC ELEVATED 001 POPLAR GROVE	Finished Water Storage	The Poplar Grove Elevated Storage Tank overflow pipe flapper was missing. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. The flapper on the overflow pipe shall be installed on the overflow pipe. See <b>Attachment #11</b>
FACILITY	CATEGORY	FINDINGS
1121008-006 - OURSO WELL-HWY 1 NORTH	Source	The Ourso Well raw water sample tap was observed to have a T connection shared with a threaded hose bibb. There shall be no pathway for contamination into the well casing and/or discharge piping. The threaded hose bibb and the T configuration shall be removed and the sample tap replaced with a single designated connection. See <b>Attachment #5</b>

#### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of the survey the facility could not produce the chlorine residual records for all of the time frame that records are required to be kept. The chlorine residuals were not recorded every day. Chlorine residuals shall be taken daily

		and records maintained on the form approved by the state health officer and maintained for a period of three years. The chlorine residual should be taken at the entry point of the distribution system and point of maximum residence time.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	During the inspection, the POE sample tap, located at the Ourso well site was observed to have a T connection shared with the flushing assembly. The water system shall relocate the Point of Entry sample tap on the water main with an approved dedicated connection. See <b>Attachment #9</b>
FACILITY	CATEGORY	FINDINGS
EL001 - WBR PUBLIC ELEVATED 001 POPLAR GROVE	Finished Water Storage	The exterior surfaces of the Poplar Grove Elevated Tower and appurtenances are showing signs of significant paint flaking and corrosion. Proper protection shall be given to metal surfaces by paints or other protective coatings, by cathodic protective devices, or by both. See <b>Attachment #12 and #13</b>
FACILITY	CATEGORY	FINDINGS
EL001 - WBR PUBLIC ELEVATED 001 POPLAR GROVE	Finished Water Storage	The overflow splash plate at the Poplar Grove Elevated Tower is not adequate. At the time of the inspection, the soil surrounding the overflow splash pad had been badly eroded. The eroded area around the splash pad and the base of the footing of the leg of the elevated tank must be corrected and measures must be taken to prevent erosion from occurring in the future. See <b>Attachment #10</b>
FACILITY	CATEGORY	FINDINGS
1121008-005 - WELL WBR PUBLIC UTILITIES HUNTER RUN	Source	At the time of inspection, the Hunters Run well vent screen was not the correct mesh size. The discharge piping shall be equipped with air relief piping

		covered with a 24 mesh corrosion resistant screen. The water system shall install a 24 mesh corrosion resistant screen on the air relief pipe at the Hunters Run Well. See <b>Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
1121008-006 - OURSO WELL-HWY 1 NORTH	Source	During the site visit of the Ourso Well, the exhaust piping was approximately 3-inches above the ground. The discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen. The exhaust piping on the discharge pipe air relief valve shall be repositioned in such a manner that is at least 18-inches above the ground. See <b>Attachment #6</b>
FACILITY	CATEGORY	FINDINGS
1121008-005 - WELL WBR PUBLIC UTILITIES HUNTER RUN	Source	The Hunters Run well casing and discharge pipe are heavily corroded which can cause leaks, if unaddressed. The water pipe should be cleaned and treated to prevent further corrosion or replaced if cleaning and treatment is not possible due to excessive corrosion. See <b>Attachment #3, #1 and #2</b>
FACILITY	CATEGORY	FINDINGS
1121008-006 - OURSO WELL-HWY 1 NORTH	Source	The Ourso well casing and discharge pipe are heavily corroded which can cause leaks, if unaddressed. The water pipe should be cleaned and treated to prevent further corrosion or replaced if cleaning and treatment is not possible due to excessive corrosion. See <b>Attachment #7 and #8</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	At the time of inspection, the Hunters Run squirrel cage on the wells rotating pump shaft was in a state of disrepair, presenting a risk to employee safety. It is recommended the squirrel cages be installed around the rotating shaft on the Hunters Run well. See Attachment #14

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Capitol Region II  
Attn: Brian Suberbielle,  
P. O. Box 4489, Bin #10, Bienville Bldg.  
Baton Rouge, Louisiana 70821-4489

The following compliance history is provided for your information

### **Bacteriological Sampling History**

#### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at (225) 342-7511.

Respectfully,

A handwritten signature in blue ink that reads "Brian Suberbielle". The signature is written in a cursive, flowing style.

Re: Class I Sanitary Survey  
WEST BATON ROUGE WATER WORKS DISTRICT 2 Public Water System  
PWS ID LA1121018  
WEST BATON ROUGE Parish

Dear Ms. Keowen:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 3, 2018 sanitary survey inspection of the public water supply system for WEST BATON ROUGE WATER WORKS DISTRICT 2 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

Name	Organization
Brian Suberbielle	LDH/OPH Engineering
Jacob Haffner	LDH/OPH District II Engineer
Pam Keowen	WBR Parish Public Utilities
Brad Martin	WBR Parish Public Utilities
Neal Traweck	LDH/OPH Engineering Services

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	Upon arrival at the Addis Elevated Storage Tower on 5/3/18, one of the security gates was noted to be unlocked and open. All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked and areas shall be locked when unattended. See <b>Attachment #9</b>
FACILITY	CATEGORY	FINDINGS
EL002 - ADDIS ELEVATED TOWER	Finished Water Storage	During the inspection, it was observed that the screen on the overflow pipe of the Addis Elevated Storage Tower was not the correct mesh size. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. The overflow pipe shall be screened with a 24 mesh, non-corrodible screen to prevent the intrusion of insects and other small pests. See <b>Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
1121018-003 - WBR WWKS DIST #2 NORTHLINE ROAD WELL	Source	There shall be no pathway for contamination into the well casing. The digital chlorine analyzer at the Northline Well was directly connected to a drain, creating a cross connection. All well appurtenances shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. Some type of backflow prevention device must be installed on the chlorine analyzer to eliminate

		the cross connection. See Attachment #4
--	--	---

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	At the time of inspection, there was no sampling tap on the Brusly Elevated Tower. A smooth-nosed sampling tap(s) shall be provided to facilitate collection of water samples for both bacteriological and chemical analyses.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	During the inspection, it was observed that the splash pad at the Brusly Elevated Tower was not preventing erosion at the base of the footing of the leg of the elevated tank. The splash pad at the Brusly Elevated Tower shall be repaired to prevent any future erosion and the eroded area shall be rebuilt. See Attachment #2
FACILITY	CATEGORY	FINDINGS
EL002 - ADDIS ELEVATED TOWER	Finished Water Storage	The overflow splash plate at the Addis Storage Tower is not adequate. At the time of the inspection, the soil under and surrounding the overflow splash pad had been badly eroded. The eroded area around the splash pad and the base of the footing of the leg of the elevated tank must be corrected and measures must be taken to prevent erosion from occurring in the future. See Attachment #10
FACILITY	CATEGORY	FINDINGS
TP002 - WESTGATE TREATMENT PLANT	Treatment	At the time of the inspection, the Westgate Treatment Plant chlorine gas storage room did not have air inlets near the ceiling. Where chlorine gas is used, the room shall be constructed to provide the following: air inlets should be through louvers near the ceiling

		and exhaust fans near the floor.
FACILITY	CATEGORY	FINDINGS
1121018-003 - WBR WWKS DIST #2 NORTHLINE ROAD WELL	Source	During the inspection, the Northline Well did not have a working flow meter. Each well is required to have a means of measuring flow. Fix or replace the flow meter at the Northline Well. See Attachment #3

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of inspection, the water system had difficulty locating all of the records required by LDH. Developing a filing system is recommended in order to maintain all chlorine residual reports, chemical and bacteriological records, drinking water records, official LDH communications, public notices, Consumer Confidence Reports, cross connection ordinance with a list of customers and testing results that are chronologically organized by type, kept current and readily accessible at all times.
FACILITY	CATEGORY	FINDINGS

Management	Other	During the inspection, the sanitary seal on the Westgate Well appeared to be showing signs of degradation. This office recommends that the well casing seal on the Westgate Well be inspected and if necessary, repaired or replaced during the next maintenance period.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	System Management and Operation	At the time of inspection, the Westgate and Northline wells rotating pump shafts and couplings were exposed, presenting a risk to employee safety. Rigid guards, shields, or squirrel cages were not provided. It is recommended the squirrel cages be installed around the rotating shafts on the Westgate and Northline wells. <b>See Attachment #8 and #7</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>

### Attachment #1

**Severity:** Significant

**Facility ID:** ADDIS ELEVATED TOWER

**Category:** Finished Water Storage

**Attachment Comments:** During the inspection, it was observed that the screen on the overflow pipe of the Addis Elevated Storage Tower was not the correct mesh size. Any vent, overflow, or water level control gauge provided on tanks for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. The overflow pipe shall be screened with a 24 mesh, non-corrodible screen to prevent the intrusion of insects and other small pests.

**Attachment #2**

**Severity:** Minor

**Facility ID:** ELEVATED

**Category:** Finished Water Storage

**Attachment Comments:** During the inspection, it was observed that the splash pad at the Brusly Elevated Tower was not preventing erosion at the base of the footing of the leg of the elevated tank. The splash pad at the Brusly Elevated Tower shall be repaired to prevent any future erosion and the eroded area shall be rebuilt.

**Attachment #3**

**Severity:** Minor

**Facility ID:** WBR WWKS DIST #2 NORTHLINE ROAD WELL

**Category:** Source

**Attachment Comments:** During the inspection, the Northline Well did not have a working flow meter. Each well is required to have a means of measuring flow. Fix or replace the flow meter at the Northline Well.

**Attachment #4**

**Severity:** Significant

**Facility ID:** WBR WWKS DIST #2 NORTHLINE ROAD WELL

**Category:** Source

**Attachment Comments:** The digital chlorine analyzer at the Northline Well was directly connected to a drain, creating a cross connection. There shall be no pathway for contamination into the well casing. A backflow prevention device must be installed on the chlorine analyzer to eliminate the cross connection.

**Attachment #5**

**Severity:** Recommendations

**Facility ID:** WBR WWKS DIST #2 NORTHLINE ROAD WELL

**Category:** Treatment

**Attachment Comments:** The 1-ton chlorine and 150 pound gas cylinders at the Northline Treatment Plant are stored in direct sunlight. Full and empty cylinders of chlorine gas should be stored in areas not in direct sunlight or exposed to excessive heat.

**Attachment #6**

**Severity:** Recommendations

**Facility ID:** WESTGATE TREATMENT PLANT

**Category:** Treatment

**Attachment Comments:** The 1-ton chlorine gas cylinder at the Westgate Treatment Plant is stored in direct sunlight. Full and empty cylinders of chlorine gas should be stored in areas not in direct sunlight or exposed to excessive heat.

**Attachment #7**

**Severity:** Recommendations

**Category:** System Management and Operation

**Attachment Comments:** At the time of inspection, the Westgate well's rotating pump shafts and couplings were exposed, presenting a risk to employee safety. Rigid guards, shields, or squirrel cages were not provided. It is recommended the squirrel cages be installed around the rotating shafts on the Westgate well.

#### **Attachment #8**

**Severity:** Recommendations

**Category:** System Management and Operation

**Attachment Comments:** At the time of inspection, the Northline well's rotating pump shafts and couplings were exposed, presenting a risk to employee safety. Rigid guards, shields, or squirrel cages were not provided. It is recommended the squirrel cages be installed around the rotating shafts on the Northline well.

**Attachment #9**

**Severity:** Significant

**Category:** Security

**Attachment Comments:** Upon arrival at the Addis Elevated Storage Tower on 5/3/18, one of the security gates was noted to be unlocked and open. All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked and areas shall be locked when unattended.

**Attachment #10**

**Severity:** Minor

**Facility ID:** ADDIS ELEVATED TOWER

**Category:** Finished Water Storage

**Attachment Comments:** The overflow splash plate at the Addis Storage Tower is not adequate. At the time of the inspection, the soil under and surrounding the overflow splash pad had been badly eroded. The eroded area around the splash pad and the base of the footing of the leg of the elevated tank must be corrected and measures must be taken to prevent erosion from occurring in the future.

Dear Mr. Baker:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 17, 2018 sanitary survey inspection of the public water supply system for TOKAI CARBON CB (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

**No observations were recorded in this category.**

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	An entry point sample tap is not provided between the hydro pneumatic tank and entry point to distribution system. Smooth-nosed sampling tap(s) shall be provided to facilitate collection of water samples for both bacteriological and chemical analyses.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	Excessive corrosion noted on sample tap piping. See <b>Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
TP001 - TP - N&S COMBINED	Treatment	The chlorination day tank is not properly labeled. See <b>Attachment #3</b>
FACILITY	CATEGORY	FINDINGS

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	The fence at well 003 was in a state of disrepair at the time of the survey. The fence shall be at least six feet tall and resistant to climbing. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
1125006-006 - REPLACEMENT FOR WELL #4	Source	During the survey, it was noted that there was no smooth nosed sample tap upstream of the discharge check valve from which to take raw water samples from. All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction.

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of the survey, there were gaps in the records of daily chlorine residual monitoring. A public water system (PWS) shall measure the residual disinfectant concentration within the distribution system at least once per day.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of the survey, there were sanitary survey letters that were not able to be produced by the water system. Copies of any written reports, summaries or communications relating to sanitary surveys of the system conducted by the system itself, by a private consultant, or by

		any local, State, or Federal agency, shall be kept for a period not less than 10 years after completion of the sanitary survey involved.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL #3 (PARKER STREET)	Treatment	At the time of the survey, there was no ventilating fan in the room with the chlorine cylinders that were currently in use. Where chlorine gas is used, the room shall be constructed to provide the following: each room shall have a ventilating fan with capacity which provides one complete air change per minute when the room is occupied.
FACILITY	CATEGORY	FINDINGS
TP002 - WELL #4 (PROSPERITY STREET)	Treatment	At the time of the survey, there was no ventilating fan in the room with the chlorine cylinders that were currently in use. Where chlorine gas is used, the room shall be constructed to provide the following: each room shall have a ventilating fan with capacity which provides one complete air change per minute when the room is occupied.
FACILITY	CATEGORY	FINDINGS
TP003 - WELL #5 (AT HARDWOOD)	Treatment	At the time of the survey, there was no ventilating fan in the room with the chlorine cylinders that were currently in use. Where chlorine gas is used, the room shall be constructed to provide the following: each room shall have a ventilating fan with capacity which provides one complete air change per minute when the room is occupied.
FACILITY	CATEGORY	FINDINGS
1125006-006 - REPLACEMENT FOR WELL #4	Source	At the time of the survey, the casing of the well did not appear to have a vent. All potable water well casings shall be vented to atmosphere. See <b>Attachment #5</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the survey, the packing on well 005 was leaking excessively. The packing should be repaired or replaced in order to prevent damage to the well shaft. See <b>Attachment #7</b>
FACILITY	CATEGORY	FINDINGS
Management	Other	During the survey, it was noted that the ground around the well slab at well 003 was starting to show signs of erosion. The ground that was washed away should be replaced in order to protect the integrity of the slab. See <b>Attachment #6</b>
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	At the time of the survey, there were two spinning shafts at well 006, as well as one at well 005, that were not in a protective enclosure. Both the motor shaft from the generator and the spindles on the wells should be enclosed in such a way that would prevent hair or clothing from becoming entangled. See <b>Attachment #3 and #2</b>

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Capitol Region II  
Attn: Clark Broussard,  
P. O. Box 4489, Bin #10, Bienville Bldg  
Baton Rouge, Louisiana 70821-4489

The following compliance history is provided for your information

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 225-342-7301.

Respectfully,

A handwritten signature in blue ink, appearing to read 'Clark Broussard', is written over a faint, larger signature.

Re: Class I Sanitary Survey  
VILLAGE of CALVIN WATER SYSTEM Public Water System  
PWS ID LA1127002  
WINN Parish

Dear Mr. Canerday:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 10, 2018 sanitary survey inspection of the public water supply system for VILLAGE of CALVIN WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Matthew Page	Ldh Oph Engineering Services
Marlan Hodges	Village Of Calvin
William Martin	Village Of Calvin

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

No observations were recorded in this category.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
1127002-001 - WELL 1	Source	At the time of inspection Well #1 did not have a flow meter. A means of measuring flow must be provided for each well.
FACILITY	CATEGORY	FINDINGS
1127002-002 - WELL 2	Source	At the time of inspection Well #2 did not have a flow meter. A means of measuring flow must be provided for each well.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is the recommendation of the Department of Health that all storage facilities be inspected, cleaned, repaired, repainted, or replaced every 3-5 years or as needed.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

#### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
06/07/2012	10/26/2012	Sanitary Survey, Finished	Significant	System Management and Operation	Management
<b>Comments:</b> A secondary power source is needed to operate one or more wells and the disinfection equipment.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
06/07/2012	10/26/2012	Sample collection	Significant	System Management and Operation	Management
<b>Comments:</b> A secondary power source is needed to operate one or more wells and the disinfection equipment.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - Distribution System	Distribution System	The water system did not have a formal cross connection control program in place. The water system shall implement a formal cross connection control program. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods
FACILITY	CATEGORY	FINDINGS
1127005-002 - Well 2	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. There were holes in the back of the electrical box that could allow the entrance of insects into the well casing. The holes shall be sealed.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
TP002 - Disinfection Well 2	Treatment	Where chlorine gas is used, the room shall be constructed to provide the following: separate switches for the fan and lights shall be located outside of the chlorine room and at the inspection window. Outside switches shall be protected from vandalism. A signal light indicating fan operation shall be provided at each entrance when the fan can be controlled from more than one point. There was a hole where the switches should be located for the treatment plant. This in turn made the light and ventilation fan inoperable. Switches should be installed and then light and ventilation fan should be brought to working order.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP003 - Disinfection Well 3	Treatment	Adequate housing must be provided for the chlorination equipment and for storing the chlorine. The light was not working in the feed room and the storage room of the treatment plant. The light bulbs should be replaced.
FACILITY	CATEGORY	FINDINGS
TP003 - Disinfection Well 3	Treatment	Full and empty cylinders of chlorine gas should be isolated from operating areas, restrained in position to prevent upset, stored in rooms separate from ammonia storage, and stored in areas not in direct sunlight or exposed to excessive heat. There were chlorine cylinders chained outside of the treatment plant in direct sunlight. These cylinders should be stored in a place where sunlight cannot directly reach them.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.

# Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The MRT sampling location recorded in the daily chlorine residual reports was not the proper sampling location from their MPP. The ACR was not being monitored at least once per month. The water system did not have records of daily chlorine residuals from December 2015 to March 2017. The water system shall monitor and maintain the MRT daily and the ACR monthly at the proper sampling locations,
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system did not have all bacteriological sample results available since the last sanitary survey in December 2015.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system did not have the calibration standards to properly validate the bench top colorimeter. A low and high range set of calibration standards shall be obtained.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND AT WELL 2	Finished Water Storage	The GST was not properly screened with a twenty four mesh non-corrodible screen. The water system shall install a twenty four mesh non-corrodible screen on the overflow pipe of the GST. See <b>Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
TP001 - DISINFECTION WELL 1	Treatment	The ventilating fan was not in working order in the left chlorine building. The water system shall repair or replace the ventilating fan. See <b>Attachment #6</b>
FACILITY	CATEGORY	FINDINGS
1127010-002 - WELL 2 - FIRE STATION	Source	The pressure gauge on Well 2 was not in working order. The water system will repair/replace existing pressure gauge. See <b>Attachment #1</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The gate behind the GST at Well 2 was not secured. The water system should secure the gate with a chain to prevent unauthorized access.
FACILITY	CATEGORY	FINDINGS
TP002 - TP @ FIRE STATION (GR002)	Treatment	Full and empty cylinders of chlorine gas are not restrained individually. The water system should restrain the chlorine cylinders individually to prevent upset. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
TP004 - TP @ TREATMENT PLT-GR003, GR004	Treatment	Full and empty cylinders of chlorine gas are not restrained individually. The water system should restrain the cylinders of chlorine gas individually. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
WELL 1 AND 2 AREAS	System Management and Operation	Vegetation at Well 2 at Fire Station and Well 1 was overgrown. <b>See Attachments #2,7,8, 9,10</b>

*In accordance with the provisions found in LA ACT No. 292, PWS shall maintain a record of each complaint it receives by telephone, letter, or electronic mail from customers or users. The record of each complaint shall include the date the complaint was received, the service connection to which the complaint relates, the name of the customer or user making the complaint and associated contact information, and a brief description of the complaint. The log containing the record shall also include documentation of corrective actions that PWS has implemented with respect to the matters detailed in the complaint. PWS shall retain the complaint records for at least five years, and shall make the records available to the Louisiana Department of Health upon request and without charge. Within 60 days of receipt of this survey develop and implement a complaint log.*

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

PWS ID LA1127017  
Winn Parish

Dear Mr. Atherton:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 13, 2018 sanitary survey inspection of the public water supply system for Tannehill Water System (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

Office of Public Health • Northeast Region VIII

Phone #: 318-361-7201 • Fax #: 318-362-3163 • [www.ldh.la.gov](http://www.ldh.la.gov)  
"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

No unresolved observations were recorded in this category.

### **Significant Deficiencies**

No observations were recorded in this category.

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the system personnel could not login to the Monitoring Plan Portal to review or make changes to the monitoring plan. Contact local regional staff to obtain a working username and password.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of the inspection, it was noted the colorimeters being used to measure the chlorine residuals in the systems were not being checked against known color standards to verify the colorimeters are operating properly. Color standards must be purchased that are specified by the manufacturer of the colorimeter and used weekly to test the colorimeters and this information is to be recorded. Deviations of + or - 10 percent or more shall be cause for calibration, repair, or replacement of the equipment.
FACILITY	CATEGORY	FINDINGS
TP001 - DISINFECTION TANNEHILL WELL	Treatment	At the time of inspection, a functioning light was not present in the chlorine room. Install a functioning light inside the chlorine room, with a separate switch for the fan and light located outside the chlorine room.
FACILITY	CATEGORY	FINDINGS
1127017-001 - WELL 1 AT TANNEHILL	Source	Rust was noted on the well casing and discharge piping. The well must be maintained properly and protected from the elements to prevent corrosion and pitting. Paint the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1127017-002 - WELL 2 NEAR HANNAS MILL	Source	Rust was noted on the well casing and discharge piping. The well must be maintained properly and protected from the elements to prevent corrosion and pitting. Paint the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1127017-001 - WELL 1 AT TANNEHILL	Source	Well #1 did not have a means of measuring instantaneous or total flow through the discharge piping. Install a flow meter on the discharge piping of Well #1.
FACILITY	CATEGORY	FINDINGS
1127017-002 - WELL 2 NEAR HANNAS MILL	Source	Well #2 did not have a means of measuring instantaneous or total flow through the discharge piping. Install a flow meter on the discharge piping of Well #2.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
HD001 - HYDRO- PNEUMATIC AT TANNEHILL	Finished Water Storage	At the time of inspection, the hydro-pneumatic tank appeared to be covered in mildew. The paint coating should be properly maintained and cleaned to prevent deterioration, in addition to keeping an acceptable outward appearance. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services  
Northeast Region VIII  
Attn: Tyler Lollis,  
1650 Desiard St., 2<sup>nd</sup> Floor  
Monroe, Louisiana 71201

The following compliance history is provided for your information:

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
12/17/2015	02/22/2016	Sanitary Survey, Finished	Minor	Source	1127019-001-WELL 1
<b>Comments:</b> A flow meter is required for Well 1.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
12/17/2015	02/22/2016	Sanitary Survey, Finished	Minor	Source	1127019-002-WELL 2
<b>Comments:</b> A flow meter is required for Well 2.					

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The system has not adopted and is not enforcing a Cross Connection Control Program (CCCP). A survey of the water system must be completed to compile an up-to-date customer listing showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, such as restaurants, hospitals, schools, funeral homes, jails, churches, farms, customers with swimming pools, private wells, fountains, animal watering troughs, and others., are properly protected by an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement.
FACILITY	CATEGORY	FINDINGS
1127019-001 - WELL 1	Source	At the time of inspection, it appeared that there was a gap in between the well casing and well seal. The gap presents the opportunity for contamination to enter into the well casing and discharge piping. Fix the gap in the well seal.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the system personnel could not login to the Monitoring Plan Portal to review or make changes to the monitoring plan. Contact local regional staff to obtain a working username and password.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of the inspection, it was noted the colorimeters being used to measure the chlorine residuals in the systems were not being checked against known color standards to verify the colorimeters are operating properly. Color standards must be purchased that are specified by the manufacturer of the colorimeter and used weekly to test the colorimeters and this information is to be recorded. Deviations of + or - 10 percent or more shall be cause for calibration, repair, or replacement of the equipment.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system was monitoring the chlorine residual daily at the proper points, however the readings were being documented improperly with the forms being mixed up. Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Please send the Region 8 office a copy of the next three (3) months of properly recorded chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	The overflow screen on the ground storage tank was ripped down the center. Ground storage tank overflows must be covered by a 24 mesh non-corrodible screen. Replace the broken overflow screen with a 24 mesh non-corrodible screen.
FACILITY	CATEGORY	FINDINGS
1127019-002 - WELL 2	Source	Heavy rust was noted on the well casing and discharge piping. The well must be maintained properly and protected from the elements to prevent corrosion and pitting. Paint the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1127019-001 - WELL 1	Source	Heavy rust was noted on the well casing and discharge piping. The well must be maintained properly and protected from the elements to prevent corrosion and pitting. Paint the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1127019-002 - WELL 2	Source	The well vent was not downturned. The well vent must terminate in a downward direction and be covered by a 24 mesh corrosion resistant screen. Fix the well vent to terminate in a downturned direction.

FACILITY	CATEGORY	FINDINGS
1127019-001 - WELL 1	Source	Well #1 did not have a working pressure gauge and a means of measuring flow. Replace the pressure gauge and install a means of measuring flow on the well discharge piping.
FACILITY	CATEGORY	FINDINGS
1127019-002 - WELL 2	Source	Well #2 did not have a working pressure gauge and a means of measuring flow. Replace the pressure gauge and install a means of measuring flow on the well discharge piping.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The pump(s) and piping at the treatment plant site are showing signs of corrosion, which can result in leaks if not treated. Clean and paint the pump(s) and piping.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was noted during the sanitary survey that the water system did not routinely compare monthly water production to water sold to estimate monthly water loss. Analysis of water loss is important to quantify leaks in the distribution system or other inferences.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was noted during the sanitary survey that the water system did not keep a customer complaint log. Effective August 1, 2018, community water systems are required by Act 292 to establish and maintain records of customer complaints. The aspects of the log include time and date of the complaint, location, the name of the customer or user, a brief description, and the corrective actions implemented to resolve the complaint. These records must be maintained by the water system for a minimum of 5 years and must be made available for review by LDH upon request. These records can be vital to identify problem areas in your distribution system and can also support efforts to seek funding for various issues that may plague the water system.

### 7.1 Financial Question Set

01/31/2017

PWS Name:	Wheeling Water System Inc		
PWS ID:	LA 1127019	Date:	12/11/18

1. Are individual customers charged for water usage either through a metered or flat rate? Yes metered
2. Has the system raised water rates in the past five years? No
3. Is the water system's income sufficient to cover all operating costs? No
4. Does the water system have an annual operating budget? Yes
5. Is there a reserve fund to draw upon for emergencies and major equipment replacement in regard to the water system? No
6. Does the water system have an annual capital improvements budget? No
7. Is there a separate set of accounting records which record the financial activities of the water system (revenues collected, expenses paid, assets and liabilities)? Yes
8. Does the system routinely track water loss? No
9. Does the system know the quantities of water produced and sold on a daily basis? Yes

Use additional sheets and/or documentation as necessary. Within 60 days of the survey's completion, FAX or email the completed form along with any supporting documentation to the DWRLF.
