Re: Class I Sanitary Survey  
Town of Church Point Water System  
PWS ID #: LA1001001  
Acadia Parish

Dear Mayor Stelly:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 21, 2018 sanitary survey inspection of the public water supply system for Town of Church Point Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

Name	Organization
Hayden K. Keigley	LDH/OPH Region 4 Engineering
Jonathan Murphy	Town of Church Point Water System

#### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

#### Unresolved Observations

No unresolved observations were recorded in this category.

**Significant Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 Distribution System	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been enforcing the CCCP and there were no current files for review during the sanitary survey. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1001001-004 Well #4 (Northeast Well)	Source	The area around the well is wet due to excessive discharge from the well. The ponding water presents a potential source of contamination. The discharge from the well needs to be addressed.

**Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	Due to an increase in the number of service connections, the water system must install an additional TCR sampling point. The monitoring plan will be returned for updating. Please consult with LDH about the location of the additional TCR sampling point.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL001 Elevated Tower	Finished Water Storage	The finished water storage facility is not equipped with an approved sample tap. The elevated tower must be equipped with a smooth-nosed sampling tap. Install an approved tap on the elevated tower in a downturned direction to facilitate the collection of water samples for bacteriological and chemical analyses, when needed.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1001001-002 Well #2 (Southwest Well)	Source	The pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1001001-004 Well #4 (Northeast Well)	Source	The pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. The tap must be installed on a horizontal section of the common header after the service pumps and prior to distribution. This task must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Hayden K. Keigley, P.E.  
825 Kaliste Saloom Road  
Brandywine 3, Suite 100  
Lafayette, LA 70508

The following compliance history is provided for your information:

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

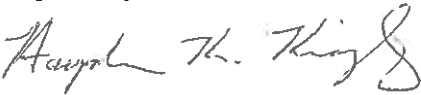

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at (337) 262-5634.

Respectfully,

Hayden K. Keigley, P.E.  
Engineer 4

CROWLEY WATER SYSTEM (LAWCO) Public Water System  
PWS ID LA1001002  
ACADIA Parish

Dear Mr. Edrington III:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 17, 2018 sanitary survey inspection of the public water supply system for CROWLEY WATER SYSTEM (LAWCO) (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## Parties Present

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

No unresolved observations were recorded in this category.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There are a few hose bib locations at the production facility where atmospheric vacuum breakers are not installed. Install atmospheric vacuum breakers on the hose bibs and refrain from flow control devices at the end of washdown hoses.
FACILITY	CATEGORY	FINDINGS
1001002-001 - WELL #5	Source	The well is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve and shall terminate in a downward direction. The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap. A minimum clearance of 12 inches must be provided underneath the raw water sample tap.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with a four mesh non-corrodible screen and installed to provide protection at all times. The screening must be independent of the flapper.
FACILITY	CATEGORY	FINDINGS
1001002-001 - WELL #5	Source	1. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. The pressure gauge is currently installed downstream of the check valve. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions. 2. The well is not equipped with a means of measuring flow. A means of measuring flow must be provided.

FACILITY	CATEGORY	FINDINGS
1001002-005 - WELL #9	Source	The area where the casing vent piping joins the well's outer casing is showing signs of heavy corrosion. The area where the casing vent piping joins the well's outer casing is must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint this area to prevent a source of potential contamination.
FACILITY	CATEGORY	FINDINGS
1001002-001 - WELL #5	Source	The control valve is leaking and covered in organic growth. The control valve needs to be repaired or replaced to eliminate the potential for contamination.
FACILITY	CATEGORY	FINDINGS
1001002-005 - WELL #9	Source	The screening on the air release-vacuum relief valve is broken. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screen to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1001002-001 - WELL #5	Source	The well does not currently have an air release valve installed. Where applicable, the discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh, corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1001002-003 - WELL #7	Source	The well is not equipped with a casing vent. The well must be equipped with a downturned casing vent with appropriate non-corrodible, 24 mesh screening. It must be installed at a minimum height of 12 inches above the grade or floor and must have a minimum diameter of 1 inches.
FACILITY	CATEGORY	FINDINGS
1001002-004 - WELL #8	Source	The well is not equipped with a means of measuring flow. A means of measuring flow must be provided.
FACILITY	CATEGORY	FINDINGS
1001002-002 - WELL #6	Source	The well is not equipped with a means of measuring flow. A means of measuring flow must be provided.
FACILITY	CATEGORY	FINDINGS
1001002-002 - WELL #6	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

FACILITY	CATEGORY	FINDINGS
1001002-003 - WELL #7	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Survey Notes:**

The water system is planning a major pipe and valve replacement project in the filter gallery area. The parts are onsite awaiting installation. The water system has given great thought about how to isolate and properly maintain water production and service during this project. There could be a short shutdown period, but continuous service is anticipated.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Steven R. Joubert, P.E.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3214.

Respectfully,

Steven R. Joubert, P.E.

"An Equal Opportunity Employer"

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water system was unable to provide the chemical analyses for the chosen method of treatment (potassium permanganate). All public water systems must use an approved chemical laboratory to perform all required chemical analyses using approved laboratory methodologies. Review the required instruction at <a href="http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf">http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf</a> and complete the required application form located at <a href="http://ldh.la.gov/index.cfm/page/963">http://ldh.la.gov/index.cfm/page/963</a> under the heading Approved Laboratory Form (Instructions).
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The chemical (potassium permanganate) solution tank(s) do not demonstrate proper protection against backflow events. The chemical solution tank(s) shall be properly protected from backflow as required by the reviewing authority. Install an atmospheric vacuum breaker on the hose bib supplying the water to the solution tank and maintain an approved air gap between the water supply hose and the rim of the solution tank.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system; however, the water system has not been enforcing the CCCP, and there were no current files for review during the sanitary survey. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. All commercial customers should be assessed for proper backflow prevention devices. An updated customer listing must be compiled showing the critical customers within the distribution system. The water system must demonstrate implementation of the CCCP by providing documentation of correspondences notifying relevant customers of the backflow preventer installation/testing requirements and the associated penalties for non-compliance. Please send this office a copy of all such communications and a record of customer responses. Please feel free to call this office to discuss the required protection for any customer on the water system.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological test and chemical test results reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, the Stage 2 Disinfection Byproducts and Lead & Copper test results were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made once a month at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. On various dates, the chlorine residual was not recorded for the MRT site. Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms. The "LDH Approved Chlorine Residual Forms" can be found on LDH's website at the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> .
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	From review, the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	The existing screen for the elevated towers overflow pipe is damaged. The overflow piping must be screened with a four mesh, non-corrodible screen. Replace the damaged screen with a new four mesh, non-corrodible screen to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
1001004-003 - WELL #3 - NEAR CLARIFIER & BACKWASH PIT	Source	The well discharge piping is not equipped with a means for measuring flow. A device or method must be employed to measure the quantity of water being produced daily. Please submit labeled photographic documentation of completed modifications.
FACILITY	CATEGORY	FINDINGS
1001004-001 - WELL #1 - NEAR GROUND STORAGE TANK	Source	The well discharge piping is not equipped with a means for measuring flow. A device or method must be employed to measure the quantity of water being produced daily. Please submit labeled photographic documentation of completed modifications.
FACILITY	CATEGORY	FINDINGS
1001004-002 - WELL #2	Source	The well discharge piping is not equipped with a means for measuring flow. A device or method must be employed to measure the quantity of water being produced daily. Please submit labeled photographic documentation of completed modifications.
FACILITY	CATEGORY	FINDINGS
1001004-001 - WELL #1 - NEAR GROUND STORAGE TANK	Source	The well's outer casing, casing vent piping, discharge piping, and the steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

Dear Mayor Thibodeaux:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the January 11, 2018 sanitary survey inspection of the public water supply system for Village of Morse Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

<b>Name</b>	<b>Organization</b>
Hayden Keigley	LDH Region IV Engineering
Renee Carlson	Village of Morse
Kyle Champagne	LDH Region IV Engineering
Ebenezer Omojola	LDH Region IV Engineering

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 Distribution System	Distribution System	An ordinance for a cross connection control program for the water system was adopted in 2008. However, there is no customer list with backflow devices being managed by the water system. A customer listing should be compiled showing customers and applicable devices. All commercial customers should be assessed for proper backflow prevention devices. The water system should have a procedure for addressing existing customers that do not currently have the required protection device. Feel free to call Kyle Champagne at (337) 262-5316 to discuss the required protection for any customer on the water system.

### Minor Deficiencies

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	All bacteriological and chemical test result reports from the laboratory must be kept on file and retained for not less than ten (10) years. During the sanitary survey, some of the test result reports were not available for review. All such records must be made available for review during inspections and sanitary surveys of the public water system performed by LDH.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL001 Elevated Tower	Finished Water Storage	From review during the sanitary survey, the elevated tower should be inspected. Finished water storage facilities are generally inspected and maintained on a routine basis. An inspection period of 3 to 5 years is typically recommended. The water system does not have any recent inspection reports to support the overall integrity of the elevated tower's exterior conditions. An inspection and preventative maintenance should be performed on the exterior of the elevated tower to prevent any future corrosion issues.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	The chemical feed tank for the potassium permanganate is not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	The light in the chlorine gas feed room is not operational. Either the bulb is burned or there is an electrical issue. The chlorine gas feed room must be equipped with a working light.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	The ventilating fan in the chlorine gas feed room is currently not operational. This room must be equipped with a working ventilating fan. Repair or replace the fan in the chlorine gas feed room for proper ventilation.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	There is not a receiving basin capable of receiving accidental spill or overflows in the area where potassium permanganate is feed. A floor drain near the potassium permanganate feed tank will not allow accidental discharges to be contained for proper clean up. A receiving basin capable of receiving accidental spill or overflows without uncontrolled discharges is needed.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Hayden K. Keigley, P.E.  
825 Kaliste Saloom, Brandywine 3, Suite 100

Rayne, LA 70578

Re: Class I Sanitary Survey  
CITY of RAYNE WATER SYSTEM Public Water System  
PWS ID LA1001007  
ACADIA Parish

Dear Mayor Robichaux:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 3, 2018 sanitary survey inspection of the public water supply system for CITY of RAYNE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Kyle Champagne	LDH Region IV Engineering
Lee Hebert	City Of Rayne
Mike Judice	City Of Rayne
Ebenezer Omojola	LDH Region IV Engineering

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

No observations were recorded in this category.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website at the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Due to an increase in the number of service connections, the water system must install an additional TCR sampling point. The monitoring plan will be returned for updating. Please consult with LDH about the location of the additional TCR sampling point.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	From review, the elevated tower should be inspected. Finished water storage facilities are maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system's last inspection on the elevated storage tank was in 2011. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE TANK #2	Finished Water Storage	From review, the ground storage tank should be inspected. Finished water storage facilities are

		generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK #1	Finished Water Storage	From review, the ground storage tank should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	The existing screen for the elevated towers overflow pipe is damaged. The overflow piping must be screened with a four mesh, non-corrodible screen. Replace the damaged screen with a new four mesh, non-corrodible screen to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	The overflow piping for the elevated storage tank terminates too close to the natural ground surface. A splash plate must be provided for the overflow piping to prevent erosion of the foundation. The discharge outlet must be installed at an elevation between 12 and 24 inches above a splash plate. Install a splash plate to receive the discharge from the outlet and modify the existing overflow piping to maintain an adequate elevation above the splash plate.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK #1	Finished Water Storage	The screen for the ground storage overflow pipe is damaged. The overflow pipe must be screened with a twenty-four mesh, non-corrodible screen. Replace the damaged screen to provide sanitary protection at all times.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELLS 7, 8 ,& 9	Treatment	The chlorine gas room currently does not have an air intake louver. The chlorine gas room must be constructed with an air intake located near the ceiling. Install a screened air intake louver or openings near the ceiling to properly ventilate the chlorine gas room. Air movement should be through screened louvers or openings near the

		ceiling. Every square foot of space requires at least 1 square inch of effective opening for proper ventilation.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELLS 7, 8, & 9	Treatment	The water system currently uses Tetrapotassium Pyrophosphate (TMB-460) as an inhibitor for corrosion control. All public water systems that use phosphates for treatment must have test equipment capable of monitoring and measuring total phosphate. The total phosphate applied shall not exceed 10 mg/L measured as PO <sub>4</sub> . Obtain adequate testing equipment and begin monitoring the dosage to insure that the total phosphate does not exceed this limit.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELLS 7, 8, & 9	Treatment	There is no secondary containment provided for the chemical being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment for the TMB-901 storage tank with a sufficient containment volume.
FACILITY	CATEGORY	FINDINGS
1001007-003 - WELL #7	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1001007-005 - WELL #9	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1001007-004 - WELL #8	Source	The well's outer steel base plate used to support the pump is showing signs of heavy rusting,

		corrosion, and flaking paint. The well's steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's steel base plate to prevent sources of potential contamination.
--	--	---

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELLS 7, 8, & 9	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELLS 7, 8, & 9	Treatment	The chlorine feed room does not have a door equipped with panic hardware and the door does not open outward to the building exterior. The chlorine feed room shall be provided with a door that is equipped with panic hardware and a shadow resistant window that opens outward only to the building exterior to assure a ready means of exit.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELLS 7, 8, & 9	Treatment	The chlorine gas cylinders are not properly secured. Full and empty cylinders of chlorine gas must be restrained in position at all times to prevent upset. Properly secure all chlorine gas cylinders.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

ALLEN Parish

Dear Mr. Reeves:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 18, 2018 sanitary survey inspection of the public water supply system for WEST ALLEN PARISH WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Nathan M Booher	West Allen Parish Water System
Amy Mateme	West Allen Parish Water System

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

#### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

#### **Significant Deficiencies**

**No observations were recorded in this category.**

#### **Deficiencies**

**No observations were recorded in this category.**

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

**Both wells are equipped with air relief mechanisms on the casing vent. It is not clear if the present of these devices allows the true function of a casing vent. The vent should allow the free flow of air with a protective screen to keep out pests and insects. The presence of the air relief valve is unique. There is no objection to the presence of this device, if the function of the casing vent is unchanged by its presence. Please provide some feedback on this aspect.**

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Steven R. Joubert, P.E.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

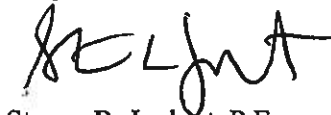

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3214.

Respectfully,

Steven R. Joubert, P.E.  
District Engineer

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Significant Deficiencies

No observations were recorded in this category.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
GR005 - BOOSTER #1 WEST	Finished Water Storage	The area around the storage tank, near the splash pad, has evidence of ponding water. This area around the tank within 50 feet must be well drained and graded to facilitate the rapid removal away from the storage tank. The ponding water presents a potential source of contamination and could potentially compromise the integrity of the structure.
FACILITY	CATEGORY	FINDINGS
1003009-002 - WELL #2	Source	1. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination. 2. The air relief valve is leaking. The air relief valve needs to be repaired or replaced to eliminate the potential for contamination from the questionable quality water being retained in the air relief valve after start up.
FACILITY	CATEGORY	FINDINGS
1003009-003 - WELL #3	Source	The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1003009-004 - WELL #4	Source	The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

FACILITY	CATEGORY	FINDINGS
1003009-004 - WELL #4	Source	The well's pressure gauge is broken. The wells discharge piping must be equipped with a working pressure gauge.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #2, #3 - E GROUND STORAGE	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized. The water system currently uses automatic switch over between 2 - 150 lb. gas cylinders to guarantee continuous disinfection.
FACILITY	CATEGORY	FINDINGS
TP002 - TP FOR WELL #5	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized. The water system currently uses automatic switch over between 2 - 150 lb. gas cylinders to guarantee continuous disinfection.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
SOUTH OAKDALE WATER SYSTEM Public Water System  
PWS ID LA1003008  
ALLEN Parish

Dear Mr. Manuel:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 20, 2018 sanitary survey inspection of the public water supply system for SOUTH OAKDALE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Robert Soileau	South Oakdale Water System
Dwayne Paul	South Oakdale Water System

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

No unresolved observations were recorded in this category.

### Significant Deficiencies

No observations were recorded in this category.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A POE monitoring plan needs to be established near the consecutive connection, where the water system can receive water from the City of Oakdale. Residuals must be measured at the established POE when water is being received from the City of Oakdale.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND #2 - NORTH	Finished Water Storage	The level gauge for the ground storage tank is broken. The level gauge shall be repaired and brought back to working order, unless the water system implements another way of monitoring the water level in this structure.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND #1 - SOUTH	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with twenty-four mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1, #2	Treatment	The water system has only one chlorine gas cylinder installed for each well site. Systems that require chlorination to protect the water supply must have secondary gas cylinder installed for each well. Install a second chlorine gas cylinder for each well to provide for continuous chlorine injection and continuous disinfection. (Currently, the water system's operator has a process to change cylinders ahead of their expiration, based on the scale readings.)
FACILITY	CATEGORY	FINDINGS
1003008-001 - WELL #1 - LA HWY 165 S	Source	The well does not currently have an air release valve installed. The discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh, corrosion resistant screen.

FACILITY	CATEGORY	FINDINGS
1003008-002 - WELL #2 - WARD ROAD	Source	The well is equipped with a broken flow-measuring device. A working flowmeter or an alternate means for measuring flow must be provided. Install a device used to measure flow (or monitoring methods) from the well.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1, #2	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. The tap will be placed near the exterior on the pump room on the south side of the building. This task must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers. Additional guidance has been provided by email.

#### Written Response Required

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Steven R. Joubert, P.E.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

Re: Class I Sanitary Survey  
TOWN of OBERLIN WATER SYSTEM Public Water System  
PWS ID LA1003007  
ALLEN Parish

Dear Mayor Manuel:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the November 5, 2018 sanitary survey inspection of the public water supply system for TOWN of OBERLIN WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Kathy Bailey	Town Of Oberlin Water System
Joseph "Moochie" Manuel	Town Of Oberlin Water System
Robert Smith	Town Of Oberlin Water System

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

Visit Date	Notify Date	Reason	Severity	Category	Facility
11/28/2016	11/29/2016	Sanitary Survey, Finished	Minor	Finished Water Storage	EL001-ELEVATED
<b>Comments:</b> The overflow for the elevated storage tank does not discharge over a splash plate or drainage inlet structure. The discharge must discharge over a splash plate or drainage inlet structure to prevent erosion around the foundation of the tower that could comprise the structural integrity of the tower.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
11/28/2016	11/29/2016	Sanitary Survey, Finished	Minor	Finished Water Storage	EL001-ELEVATED
<b>Comments:</b> The overflow pipe is not screened. It appears the pipe was screened previously and the screen has deteriorated. The overflow pipe must be screened with 4 mesh non-corrodible screen.					

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	In ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has no current files for review during the sanitary survey to support continued compliance. Testing reports for the existing cross connection control devices could not be confirmed. All cross connection control devices must be tested annually by a certified tester.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The vent for the elevated water tower is missing. The vent for the elevated water tower must be replaced. Until the elevated tower has been returned to a condition, where it can support a barrier for contamination for finished water storage, the Town of Oberlin will be placed under a continuous boil advisory.
FACILITY	CATEGORY	FINDINGS
1003007-002 - WELL #3 - WEST	Source	1.) The screening for the well's casing vent is broken. The well casing vent must be covered with a 24 mesh corrosion resistant screen. Replace the well casing vent screen to prevent the entrance of contaminants. 2.) The area around the well is excessively wet. The area around the well must be well-drained and facilitate the rapid removal of water within a 50 foot radius of the well. The ponding water presents a potential source of contamination.

FACILITY	CATEGORY	FINDINGS
1003007-003 - WELL #4 - EAST	Source	The area around the well is excessively wet. The area around the well must be well-drained and facilitate the rapid removal of water within a 50 foot radius of the well. The ponding water presents a potential source of contamination.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 5 Office a copy of the next three (3) months of properly recorded, chlorine residual forms. (There was no visible data for the ACR locations. The chlorine residual values reported for the MRT were higher, on most days, than the POE.)
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The records for the water system were in one combined file that also included data from the wastewater treatment plant. Separate files are needed to cover each aspect of the water system's records. Chemical results must be stored independently. Bacteriological results must be stored independently. Additional space should be appropriated for correspondence between LDH and the water system.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	From review, the finished water storage facility (elevated tower) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facility could benefit from an inspection.

FACILITY	CATEGORY	FINDINGS
1003007-003 - WELL #4 - EAST	Source	The condition of the well's discharge piping, outer casing, and casing seal are unknown due to the presence of protective insulation wrapping. The system must remove the wrapping to assess and photographically document the condition of these components. If necessary, perform maintenance to prevent corrosion, deterioration and/or potential structural failure. If necessary, clean, treat and paint the well's outer casing, casing vent piping, and discharge piping to prevent sources of potential contamination. If necessary, make repairs to, or replace, the casing seal.
FACILITY	CATEGORY	FINDINGS
1003007-002 - WELL #3 - WEST	Source	The condition of the well's discharge piping, outer casing, and casing seal are unknown due to the presence of protective insulation wrapping. The system must remove the wrapping to assess and photographically document the condition of these components. If necessary, perform maintenance to prevent corrosion, deterioration and/or potential structural failure. If necessary, clean, treat and paint the well's outer casing, casing vent piping, and discharge piping to prevent sources of potential contamination. If necessary, make repairs to, or replace, the casing seal.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Steven R. Joubert, P.E.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

Violation Number	Violation Date	Violation Type	Compliance Period
5002052	06/11/2018	INADEQUATE MIN CHLORINE RESIDUAL(GW&SW)	06/01/2018 - 06/30/2018
5002050	12/01/2017	CCR ADEQUACY/AVAILABILITY/CONTENT	

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3214.

Respectfully,

Re: Class I Sanitary Survey  
CITY of OAKDALE WATER SYSTEM Public Water System  
PWS ID LA1003006  
ALLEN Parish

Dear Mayor Paul:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 30, 2018 sanitary survey inspection of the public water supply system for CITY of OAKDALE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

**Name**

Steven R. Joubert  
Robert Stachle

OPH-Region V Engineering  
City Of Oakdale

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	EL002 - Dunn Street. The elevated storage tank has a water leak. The leak at the elevated storage tank must be repaired.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been enforcing the CCCP and there were no current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.
FACILITY	CATEGORY	FINDINGS
1003006-001 - WELL #1 - BECK ST.	Source	The area around the well is excessively wet due to excessive discharge from the well. The discharge from the well needs to be addressed. The area around the well must be well-drained and facilitate the rapid removal of water within a 50' radius of the well.
FACILITY	CATEGORY	FINDINGS
1003006-002 - WELL #2 - SOUTH WELL	Source	The area around the well is excessively wet due to excessive discharge from the well. The discharge from the well needs to be addressed. The area around the well must be well-drained and facilitate the rapid removal of water within a 50' radius of the well. This issue was previously noted on the sanitary survey dated October 13, 2015.
FACILITY	CATEGORY	FINDINGS
1003006-003 - WELL #3 - NORTH WELL	Source	The conduit for the wiring is cracked and deteriorating. The cracked conduit provides for the possible entrance of foreign substances, insects, or organisms that could lead to bacteriological contamination. Replace the cracked conduit to prevent bacteriological contamination.

FACILITY	CATEGORY	FINDINGS
1003006-001 - WELL #1 - BECK ST.	Source	The well is equipped with a smooth nosed sampling tap that has a broken control valve. The well must be equipped with a working smooth nosed sampling tap to facilitate the collection of water samples.
FACILITY	CATEGORY	FINDINGS
1003006-003 - WELL #3 - NORTH WELL	Source	The well is equipped with a smooth nosed sampling tap. The tap is painted and in poor condition. The current condition of the tap could interfere with the quality of water sampled at this well. Install a smooth nosed sampling tap to facilitate the collection of water samples.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website at the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 5 office a copy of the next three (3) months of properly recorded, chlorine residual forms. There are no readings at ACR-015 (Bradley Drive).
FACILITY	CATEGORY	FINDINGS
PF001 - PUMPS - RIVER RD.	Pump/pumping facility and control	The pump house floor is wet. It appears that the pump house floor drains area surrounding the building and routes the flow across the floor to a drain inlet near the door. Water is ponding in areas of the building. The pump room floor is not properly drained. The excessive drainage from the prelube for the pump near the door needs to be minimized and/or safely directed away. The excessive water on the pump house floor makes for unsafe working conditions and possible damage to vital facilities. This issue was previously noted on the sanitary survey dated October 13, 2015.

FACILITY	CATEGORY	FINDINGS
EL002 - DUNN ST. ELE TANK	Finished Water Storage	From review, the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
EL001 - HUDSON RD ELE TANK	Finished Water Storage	From review, the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - CITY BARN GST EAST	Finished Water Storage	From review, the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection. The exterior of the tank is in very poor condition and there are several visible places that could mark possible integrity issues. The roof vents and access hatch need to be inspected.
FACILITY	CATEGORY	FINDINGS
GR001 - CITY BARN GST WEST	Finished Water Storage	From review, the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection. The exterior of the tank is in very poor condition and there are several visible places that could mark possible integrity issues. The roof vents and access hatch need to be inspected.

FACILITY	CATEGORY	FINDINGS
EL002 - DUNN ST. ELE TANK	Finished Water Storage	The overflow piping is not directed downward. The piping discharges to an area near the base of the elevated tower that is wet and heavily vegetated. The discharge must be directed over a drainage inlet structure or a splash plate to prevent possible issues with structural integrity. The overflow piping needs to be screened with a 4 mesh non-corrodible screen and directed downward to this existing paved area near the base of the tank or the vegetated area must be modified to receive the elevated tank's overflow discharge. This issue was previously noted on the sanitary survey dated October 13, 2015.
FACILITY	CATEGORY	FINDINGS
GR001 - CITY BARN GST WEST	Finished Water Storage	The screen for the ground storage overflow pipe is damaged. The overflow pipe must be screened with a twenty-four mesh, non-corrodible screen. Replace the damaged screen to provide sanitary protection at all times. This issue was previously noted on the sanitary survey dated October 13, 2015.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1, #2, #3 - CITY BARN	Treatment	The ventilating fan is currently not operational. Either the fan is broken or there is an electrical issue. The chlorine room must be equipped with a working ventilating fan.
FACILITY	CATEGORY	FINDINGS
1003006-001 - WELL #1 - BECK ST.	Source	The air release-vacuum relief valve piping is not covered by a 24 mesh corrosion resistant screen. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1003006-003 - WELL #3 - NORTH WELL	Source	The air release-vacuum relief valve piping is not covered by a 24 mesh corrosion resistant screen. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1003006-001 - WELL #1 - BECK ST.	Source	The flowmeter for this well site is inoperable. The well must be equipped with a means of measuring flow, so the flowmeter must be repaired or replaced. This issue was previously noted on the sanitary survey dated October 13, 2015.
FACILITY	CATEGORY	FINDINGS
1003006-002 - WELL #2 - SOUTH WELL	Source	The flowmeter for this well site is inoperable. The well must be equipped with a means of measuring flow, so the flowmeter must be repaired or replaced. This issue was previously noted on the sanitary survey dated October 13, 2015.
FACILITY	CATEGORY	FINDINGS
1003006-003 - WELL #3 - NORTH WELL	Source	The flowmeter for this well site is inoperable. The well must be equipped with a means of measuring flow, so the flowmeter must be repaired or replaced. This issue was previously noted on the sanitary survey dated October 13, 2015.

FACILITY	CATEGORY	FINDINGS
1003006-002 - WELL #2 - SOUTH WELL	Source	The well does not currently have an air release valve installed. The discharge piping shall where applicable, be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh, corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1003006-001 - WELL #1 - BECK ST.	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination. The condition was previously noted in the sanitary survey dated October 13, 2015.
FACILITY	CATEGORY	FINDINGS
1003006-002 - WELL #2 - SOUTH WELL	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, flaking paint, and organic build up due to excessive and poorly drained pre-lube discharge. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat, and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1, #2, #3 - CITY BARN	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. The tap will be placed near the exterior on the pump room on the south side of the building. The pipe leading to the distribution system on the south side will be exposed and a smooth nosed sample tap will be placed. This task must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers.

#### **Water Plant at 17<sup>th</sup> Street:**

All water facilities at the 17<sup>th</sup> Street water plant location have been inactivated. From discussion with Mr. Robert Stachle, the water facilities at this location will not be brought back online without major changes or improvements. These improvements must be approved in writing prior to construction. At any point if these water facilities are activated and intended for public use, notice must be given to LDH. Activation of facilities after extended periods of inaction may require sampling by the water system and/or LDH.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made once a month at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Currently, not all locations are monitored. LDH Approved Chlorine Residual Forms can be found through the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 5 office copies of the next three (3) months of properly recorded, chlorine residual records.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #2, #3	Treatment	There is no secondary containment provided for the chemical being used for water treatment at Poplar Street. Well #3. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment for the phosphate storage tank with a sufficient containment volume.
FACILITY	CATEGORY	FINDINGS
1003002-002 - WELL #2 - MAIN STREET	Source	The air release-vacuum relief valve is not screened and not equipped with relief piping in the proper orientation. The air release-vacuum relief valve must be equipped with exhaust/relief piping terminating in a down-turned position at least 18 inches above floor level and covered with a 24 mesh corrosion resistant screen.

FACILITY	CATEGORY	FINDINGS
1003002-003 - WELL #3 - POPLAR STREET	Source	The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
1003002-002 - WELL #2 - MAIN STREET		

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Solomon Angwafo, E.I.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

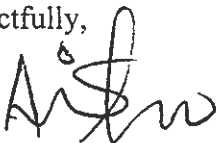

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

Re: Class I Sanitary Survey  
ALLEN PARISH WW DISTRICT NO 1 Public Water System  
PWS ID LA1003001  
ALLEN Parish

Dear Mr. Harper:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 24, 2018 sanitary survey inspection of the public water supply system for ALLEN PARISH WW DISTRICT NO 1 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Grady Strothers	Allen Parish Water District #1

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

No unresolved observations were recorded in this category.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	1. The valve pit for the elevated tower is flooded with water of a questionable quality. The valve pit for the elevated tower must be drained on a routine basis. Devices may be installed to keep the pit dry and free from possible sources of contamination and corrosion. 2. The remaining piping from the hydropneumatic tank at the Water Plant is filled with questionable quality water. The piping must be properly abandoned to eliminate any possible sources of contamination.
FACILITY	CATEGORY	FINDINGS
1003001-001 - WELL #1 - EAST	Source	The conduit for the wiring is cracked and deteriorating. Please view the area where the wiring contacts the well casing seal flange. The cracked conduit provides for the possible entrance of foreign substances, insects, or organisms that could lead to bacteriological contamination. Replace the cracked conduit to prevent bacteriological contamination.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A POE monitoring point needs to be established near the consecutive connection, where the water system will receive water from the City of Oakdale. Residuals must be measured at the established POE when water is being received from the City of Oakdale.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED STORAGE - LA HWY 1153	Finished Water Storage	The level gauge for the elevated storage tank is broken. The level gauge shall be repaired and brought back to working order.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED STORAGE - LA HWY 1153	Finished Water Storage	The overflow for the elevated storage tank does not discharge over a splash plate or drainage inlet structure. The discharge must discharge over a splash plate or drainage inlet structure to prevent erosion around the foundation of the tower that could compromise the structural integrity of the tower.

FACILITY	CATEGORY	FINDINGS
1003001-001 - WELL #1 - EAST	Source	The well discharge piping, outside and within the pump room, is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
1003001-002 - WELL #2 - WEST	Source	The well does not currently have an air release valve installed. The discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh, corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1003001-001 - WELL #1 - EAST	Source	The well does not currently have an air release valve installed. The discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh, corrosion resistant screen.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1, #2	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. The tap will be placed near the exterior of the pump room on the south side of the building. This task

		must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers. Additional guidance has been provided by email.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

No observations were recorded in this category.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC 001	Finished Water Storage	An entry point sample tap is not provided between the hydro pneumatic tank and entry point to distribution system. Smooth-nosed sampling tap(s) shall be provided to facilitate collection of water samples for both bacteriological and chemical analyses.
FACILITY	CATEGORY	FINDINGS
TP002 - WELL 002 TREATMENT PLANT-BE	Treatment	Test equipment for accurately measuring phosphates is not provided. Public water supplies which feed poly and/or orthophosphates shall have test equipment capable of accurately measuring phosphates from 0.1 to 20 milligrams per liter.
FACILITY	CATEGORY	FINDINGS
1005005-002 - BAYOU ESTATES WELL 002	Source	Minor corrosion noted on well air vent piping. The water pipes are to be cleaned and treated to prevent further corrosion.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

Visit Date	Notify Date	Reason	Severity	Category	Facility
03/09/2016	03/24/2016	Formal Enforcement	Minor	Finished Water Storage	GR001-GROUND STORAGE
<b>Comments:</b> The overflow for a ground-level storage reservoir shall open downward and be screened with twenty-four mesh non-corrodible screen. The screen shall be installed within the overflow pipe at a location least susceptible to damage by vandalism. If a flapper valve is used, a screen shall be provided inside the valve. The screen is not installed within the overflow pipe.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
03/09/2016	03/24/2016	Formal Enforcement	Minor	Treatment	TP001-SURFACE WATER TREATMENT PLANT
<b>Comments:</b> For appurtenances the following shall be provided for every filter: 1. influent and effluent sampling taps. 2. an indicating loss of head gauge. 3. an indicating rate of flow meter. A modified rate controller which limits the rate of filtration to a maximum rate may be used. However, equipment that simply maintains a constant water level on the filters is not acceptable, unless the rate of flow onto the filter is properly controlled. A pump or a flow meter in each filter effluent line may be used as the limiting device for the rate of filtration only after consultation with the reviewing authority. 4. where used for surface water, provisions for filtering to waste with appropriate measures for backflow prevention. The filters shall contain functioning flow meters.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
03/09/2016	03/24/2016	Formal Enforcement	Minor	Treatment	TP001-SURFACE WATER TREATMENT PLANT
<b>Comments:</b> Leak detection systems shall be fitted in all areas through which ammonia is piped. The leak detection analyzer did not appear to be operational at the time of the site visit.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
02/06/2015	02/09/2015	Formal Enforcement	Significant	System Management and Operation	Management
<b>Comments:</b> The method of piping to the combined filter effluent turbidity meter by split piping from each of the individual filter effluent turbidity meters does not ensure proper measurement of the combined filter effluent turbidity. Provide a single pipe/tube from the combined filter effluent water					

line to the combined filter effluent turbidity meter.

Visit Date	Notify Date	Reason	Severity	Category	Facility
02/06/2015	02/09/2015	Formal Enforcement	Minor	Treatment	TP001-SURFACE WATER TREATMENT PLANT

**Comments:** Anhydrous ammonia and storage feed systems (including heater where required) should be enclosed and separated from other works areas and constructed of corrosion resistant materials.

Visit Date	Notify Date	Reason	Severity	Category	Facility
12/18/2013	04/15/2014	Sanitary Survey, Finished	Significant	Distribution System	DS0950-DISTRIBUTION SYSTEM

**Comments:** The records provided by the water system do not include verification that the required backflow preventions devices (i.e. reduced pressure principle backflow prevention assemblies) are provided and being tested annually at CF Industries (chemical processing plant) and Ourso Funeral Home. Field testing reports shall be provided for the required backflow prevention devices at CF Industries and Ourso Funeral Home.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE	Finished Water Storage	At the time of the survey, the screen for the ground storage overflow was loose, not fully attached, and full of debris. The vent shall, on ground storage tanks, open downward with the opening at least 24 inches above the finished grade of the surrounding ground and be covered with twenty-four mesh non-corrodible screen. The screen shall be installed within the pipe at a location least susceptible to vandalism. <b>See Attachment #1</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	During the survey, it was observed that the elevated storage tank overflow was eroding the surrounding area. It is recommended that measures should be taken to remedy the eroded area and prevent future erosion. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE	Finished Water Storage	During the survey, it was observed that the ground storage tank overflow was eroding the surrounding area. It is recommended that measures should be taken to remedy the eroded area and prevent future erosion.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	Anhydrous Ammonia cylinders were stored free standing with a single tie down chain used to secure multiple cylinders. It is recommended that the cylinders are secured individually. See Attachment #3
FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	At the time of the survey, the screen present on the chemical storage vent was severely corroded. Overflow pipes and vents should be turned downward, with the end screened, have a free fall discharge, and be located where noticeable. See Attachment #4

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, the water system could not provide a list of customers that were required to have backflow prevention devices or a list of customers with backflow prevention devices and was unable to provide evidence that containment practices and maintenance/field testing requirements prescribed in LAC 51:XII.344 were being achieved. The water system shall provide a list of all customers required to have backflow prevention devices, indicate the type of backflow prevention device provided, and provide evidence that the backflow prevention devices are being tested annually.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	During the inspection, a PVC flushing line was observed extending below the surface of the water in the flushing drain at the Palo Alto and McCall elevated storage tank facilities. There shall be no physical connection between a public water supply and any other water supply which is not of equal sanitary quality and under an equal degree of official supervision and there shall be no connection or arrangement by which unsafe water may enter a public water supply system. An air gap shall be provided between the PVC flushing line and surface of the water in the flushing drain at the Palo Alto and McCall elevated storage tank facilities. See <b>Attachment #1 and #2</b>
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER - MCCALL	Finished Water Storage	During the inspection, it was observed that the screen on the overflow pipe of the McCall

		storage tank was not secure. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. The overflow pipe shall be screened with a 24 mesh, non-corrodible screen to prevent the intrusion of insects and other small pests. <b>See Attachment #5</b>
--	--	---

### Deficiencies

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	Palo Alto elevated tower booster chlorine station is attempting to dose the excess free ammonia that is contained in the chloraminated purchased water, delivered to the POE, with free chlorine. This is extremely difficult and requires a considerable monitoring effort to ensure that it is done

		properly. Dosage calculations were performed at the subject booster station using a calibration column. The results indicated that 4 ppm of free chlorine was being applied to water containing around 3 ppm of monochloramine (measure at the POE). Testing performed after dosage indicated that the monochloramine residual was unaffected after the addition of free chlorine, and may have even improved slightly. Free chlorine and monochloramine exert a demand on one another, one destroying the other, which makes the above scenario impossible. This discrepancy between calculated dose and observed dose should be investigated.
FACILITY	CATEGORY	FINDINGS
Management	Other	It is strongly recommended that the water system develop and implement a written flushing program. The water distribution system and storage tanks should be flushed as necessary to reduce stagnant water and sediment build-up. Unidirectional and directional flushing are more effective than spot flushing.
FACILITY	CATEGORY	FINDINGS
Management	Other	It is strongly recommended that the water system redesign the existing database for consumer complaints. This file should be able to easily access and export all data associated with a particular complaint. Pertinent information should contain the name of the person with the complaint, date, nature of the complaint, date of investigation and results or actions taken to correct any problems.
FACILITY	CATEGORY	FINDINGS
Management	Other	Sodium hypochlorite storage should be arranged to minimize

		the slow natural decomposition process by exposure to ultra violet light. Presently sodium hypochlorite is stored under a blue tarp. It is recommended that the sodium hypochlorite tanks at the Palo Alto Treatment plant be stored in a more protective and permanent enclosure, to minimize the decomposition of the bleach via UV and heat. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED STORAGE TANK -PALO ALTO	Finished Water Storage	At the time of the survey, the bottom section of the ladder at the Palo Alto storage tank was not secured. Ladders and ladder guards shall be provided where applicable. To prevent unauthorized users accessing the top of the elevated storage tank, the ladder at the Palo Alto storage tank shall be locked and/or secured. <b>See Attachment #4</b>

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Capitol Region II

Re: Class I Sanitary Survey  
JIMMY BABIN APARTMENTS Public Water System  
PWS ID LA1005046  
ASCENSION Parish

Dear Mr. Babin:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 2, 2018 sanitary survey inspection of the public water supply system for JIMMY BABIN APARTMENTS (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### **Parties Present**

<b>Name</b>	<b>Organization</b>
Teresa Benton	LDH District II Engineering
Jamie Allen	Jimmy Babin, LLC

#### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

Office of Public Health • Capitol Region II

P.O. Box 4489 • Baton Rouge, Louisiana 70821

Phone #: 225-342-7499 • Fax #: 225-342-7607 • [www.ldh.la.gov](http://www.ldh.la.gov)

"An Equal Opportunity Employer"

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	No public water supply shall be hereafter constructed, operated or modified to the extent that the capacity, hydraulic conditions, functioning of treatment processes, or the quality of finished water is affected, without, and except in accordance with the plans and specifications for the installation which have been approved, in advance, as part of a permit submitted by the person having responsible charge of a municipality owned public water supply or by the owner of a privately owned public water supply. The permit shall be issued by the state health officer prior to the start of such construction or modification. At the time of the inspection the emergency well pump was not located at the well. Both wells should have their own pump.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	40 CFR 141.403 and LAC 51:XII.903.B - The water supply must provide suitable taps which draw water directly from the mains or the service lines. Such taps provide for samples which are most representative of the quality of water provided without "interference" which may be caused by plumbing problems within residences or other structures. Use of such taps decreases the chance of "bad samples" resulting in a coliform maximum contaminant level (MCL) violation which requires public notification by the public water supply and an administrative enforcement action by the EPA/DHH against the public water supply. At the time of the inspection the sample tap did not have a smooth-nose.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	40 CFR 141.403 and TSS 7.2.4 - Each tank shall have an access manhole, a drain, and control equipment consisting of a pressure gauge, water sight glass, automatic or manual air blow-off, means for adding air, and pressure operated start-stop controls for the pumps. Where practical the access manhole should be 24 inches in diameter. At the time of the inspection a sight glass wasn't attached to the hydropneumatic tank.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of the inspection TCR-004 at lot #8 was not in use. Monitoring Plan Portal will need to be updated.
FACILITY	CATEGORY	FINDINGS
Management	Other	Critical water system component is in poor condition or defective and indicative of failure or imminent failure. Component failure is expected to critically impact the quality and/or quantity of produced water. The chemical feed pump is being balanced by cinder blocks. See <b>Attachment #5</b>
FACILITY	CATEGORY	FINDINGS
Management	Other	Critical water system component is in poor condition or defective and indicative of failure or imminent failure. Component failure is expected to critically impact the quality and/or quantity of produced water. There are multiple wires exposed in the treatment building, The light and electrical box is in disrepair in the treatment building also. See <b>Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
Management	Security	40 CFR 141.403 and LAC 51:XII.315.D - All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked and areas shall be locked when unattended. The fence shall be resistant to climbing and at least 6 feet high.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the inspection there were hoses hooked up to the distribution system without any backflow prevention devices. 40 CFR 141.403 and LAC 51:XII.344 - Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or

FACILITY	CATEGORY	FINDINGS
TP001 - COUNTRYSIDE MHP WELL	Treatment	At the time of the inspection the operator conveyed that water could possibly be in the blue chemical storage barrel. 40 CFR 141.403 and LAC 51:XII.325.A - Chemicals used in the treatment of water to be used for potable purposes shall either meet the standards of the American Water Works Association or meet the guidelines for potable water applications established by the U.S. Environmental Protection Agency. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
1005119-001 - COUNTRYSIDE MHP WELL	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. At the time of the inspection, the well did not have a concrete slab. <b>See Attachment #1</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of survey the facility could not produce the daily chlorine residual results, bacteriological results, chemical records, lead & copper reports and Consumer confidence reports for all of the required time frame that records are required to be kept.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the inspections several sample taps used for total coliform monitoring had a nozzle that terminates about 6 inches from the ground. Nozzles for all sample taps must terminate at least 12 inches above the ground, floor, or any other surface or object. The taps must allow for filling of sample containers without contaminating the container. <b>See Attachment #7</b>
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	At the time of the survey, the water sight glass inoperable. 40 CFR 141.403 and TSS 7.2.4 - Each tank shall have an access manhole, a drain,

		and control equipment consisting of a pressure gauge, water sight glass, automatic or manual air blow-off, means for adding air, and pressure operated start-stop controls for the pumps. Where practical the access manhole should be 24 inches in diameter. <b>See Attachment #6</b>
FACILITY	CATEGORY	FINDINGS
1005119-001 - COUNTRYSIDE MHP WELL	Source	At the time of the survey the well vent did not have a screen on it. 40 CFR 141.403 and LAC 51:XII.327.A.11 - All potable water well casings shall be vented to atmosphere as provided in 327.A.12 below, with the exception that no vent will be required when single-pipe jet pumps are used. <b>See Attachment #3</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
1005119-001 - COUNTRYSIDE MHP WELL	Source	Countryside Mobile Home Court does not have a secondary source of groundwater.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
WHITE ROAD MOBILE HOME PARK Public Water System  
PWS ID LA1005147  
ASCENSION Parish

Dear Mr. Landry:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 27, 2018 sanitary survey inspection of the public water supply system for WHITE ROAD MOBILE HOME PARK (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

Region II Engineering  
Representative

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

Office of Public Health • Capitol Region II

P.O. Box 4489 • Baton Rouge, Louisiana 70821

"An Equal Opportunity Employer"

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the survey a cross connection control plan was not implemented by the system. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1005147-002 - WHITE ROAD MHP WELL 002	Source	All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction. At the time of the survey there was no appropriate sample tap on the well.
FACILITY	CATEGORY	FINDINGS
1005147-002 - WHITE ROAD MHP WELL 002	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. The electrical

		wiring conduit for the submersible well shall be enclosed in such a way that will prevent the introduction of contamination into the well casing. <b>See Attachment #2</b>
--	--	--

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Daily residual readings were not available to review during the sanitary survey. Required measurements of disinfectant residual shall be kept on the approved forms and kept on file for no less than ten (10) years. The approved forms can be found at <a href="http://www.ldh.la.gov/index.cfm/page/963">http://www.ldh.la.gov/index.cfm/page/963</a> under the section titled LDH Approved Chlorine Residual Forms.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Sanitary survey letters from the previous ten (10) years were unavailable at the time of the sanitary survey. Sanitary Survey letters shall be kept for a period of not less than 10 years after the completion of the sanitary survey.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	Main switch gear electrical controls shall be located above grade, in areas not subject to flooding. All electrical work shall conform to the requirements of the National Electric code or to relevant state and/or local codes. The wiring for the submersible well pump was not encased in a conduit. The loose hanging wires present a significant hazard, and should be secured in a manner consistent with relevant safety guidelines laid out in the National Electric code or to relevant state and/or local codes. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water supply must provide suitable taps which draw water directly from the mains or the service lines. Such taps provide for samples which are most representative of the quality of water provided without "interference" which may be caused by plumbing problems within residences or other structures. At

		the time of the survey multiple taps were observed to be in violation by any of the following: non threaded tap with hose attached, sample tap not on its own dedicated service line, sample tap service line having a tee or other such joining between service lines. See Attachment #1
FACILITY	CATEGORY	FINDINGS
HD001 - WHITE ROAD MOBILE HOME PARK	Finished Water Storage	A point of entry sample tap shall be of the smooth nozzle type and shall be located on a horizontal section of the distribution system after the storage tank, but before the first customer.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	Barrel containing the bleach solution was not labeled. Tanks and tank refilling line entry points shall be clearly labeled with the name of the chemical contained.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	Chemicals shall be approved by the reviewing authority or meet the appropriate ANSI/AWWA standards and/or ANSI/NSF Standard 60. At the time of the survey there was no identifying information for the chemicals used to treat the water on the barrel, and the MSDS was not available.
FACILITY	CATEGORY	FINDINGS
1005147-002 - WHITE ROAD MHP WELL 002	Source	At the time of the survey the flow meter was inoperable. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the survey a sample from the raw water showed a non insignificant amount of free ammonia present. It is recommended that the water system assess the naturally occurring ammonia and investigate solutions as the presence of ammonia can interfere with the water system's ability to operate as a free chlorine system.
FACILITY	CATEGORY	FINDINGS
Management	Other	It is recommended that the water system develop, record, and implement a thorough flushing program. An effective flushing program reduces water age and is an efficient tool to deal with water quality issues.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	Chemical solutions shall be kept covered. At the time of the survey the barrel containing the disinfectant was not properly covered. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
1005147-002 - WHITE ROAD MHP WELL 002	Source	It is recommended that a second source of groundwater is provided as this will be a significant deficiency on any surveys conducted after August 1, 2018.

Gonzales, LA 70707

Re: Class I Sanitary Survey  
ALMATIS Public Water System  
PWS ID LA2005165  
ASCENSION Parish

Dear Ms. Duncan:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 27, 2018 sanitary survey inspection of the public water supply system for ALMATIS (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

<b>Name</b>	<b>Organization</b>
John Williams	LDH/OPH Deputy Chief Engineer – Field Operations
Jacob Haffner	LDH/OPH District II Engineer
James Richardson	LDH/OPH Region 2 Engineer Manager
Brian Suberbielle	LDH/OPH Region 2 Engineering
Derrick Hall	Almantis

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	This public water system is not being operated by a person whose competency has been duly certified by the state health officer for the type of facility and the population it serves. All water systems are required to have a certified operator to maintain the system. Almatís water system shall retain a Certified Operator.
FACILITY	CATEGORY	FINDINGS
Management	Other	Effluent from the activated carbon pressure filters is being used for combined filter effluent compliance. Pressure filters are not allowed for turbidity compliance.
FACILITY	CATEGORY	FINDINGS
Management	Other	The J-tube vent on the clear well lacked a twenty-four mesh non-corrodible screen. It was also observed during the survey that the access hatches on the clear well were not secured, presenting a potential pathway for contamination. Any vent or overflow provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of insects, dust or other contaminating material. See Attachment #3 and #4
FACILITY	CATEGORY	FINDINGS
Management	System Management and	This office has no evidence of a

	Operation	permit or permit application for the plate clarifier. No public water supply shall be hereafter constructed, operated or modified to the extent that the capacity, hydraulic conditions, functioning of treatment processes, or the quality of finished water is affected, without, and except in accordance with, a permit from the state health officer.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system did not have a Backflow protection/Cross-connection Control Plan. Almatitis is not ensuring the protection of the water supply system from potential contamination through the use of backflow containment practices.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	Turbidimeter sample flow rates were below the Hach minimum requirement of 250 mL/min.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The system lacks a means of readily determining the amount of chemicals (DADMAC and rust inhibitor) being dosed. Ideally, a draw down column should be provided and checked daily and when chemical adjustments are made to ensure that NSF max usage limits are not exceeded, and/or to confirm that the chemical feed pump is performing as expected. Scales, loss-of-weight recorders or liquid level (LLI) indicators, accurate to within five percent of the average daily change in reading, are also satisfactory. A treated water flow meter is also required.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	For each of the two (2) gravity filters, continuous individual filter turbidity monitoring is performed at the location shown in Figure 1. Systems with two filters have the option to continuously monitor the combined filter effluent instead of monitoring each individual filter. Pressure filters are not allowed for turbidity compliance. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
Management	Other	Turbidity sample points (taps in Figures 1 and 2) are located a significant distance (over 15) from turbidity monitors. Turbidimeters should be located as close to the sample point as possible to avoid delayed responses. <b>See Attachment #2</b>

### **Written Response Required**

Re: Class I Sanitary Survey  
ASCENSION CHRISTIAN SCHOOL Public Water System  
PWS ID LA2005231  
ASCENSION Parish

Dear Mr. Bledsoe:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 22, 2018 sanitary survey inspection of the public water supply system for ASCENSION CHRISTIAN SCHOOL (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### **Parties Present**

<b>Name</b>	<b>Organization</b>
Teresa Benton	LDH District II Compliance Manager
Cheryl Morales	Ascension Christian School

### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

Office of Public Health • Capitol Region II

P.O. Box 4489 • Baton Rouge, Louisiana 70821

Phone #: 225-342-7499 • Fax #: 225-342-7607 • [www.ldh.la.gov](http://www.ldh.la.gov)

"An Equal Opportunity Employer"

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the survey this system did not have a written and signed cross connection plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
TP001 - FAITH DAY SCHOOL WELL	Treatment	At the time of the inspection, the chemicals used for disinfection were stored in unapproved containers and there was no evidence to indicate that the chemicals within were compliant with NSF Standard 60. Provide documentation that shows the chemicals in use are compliant with EPA Standards. <b>See Attachment #2</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of survey the facility could not produce the daily chlorine residual results, bacteriological results, chemical records, lead & copper reports and Consumer confidence reports for all of the required time frame that records are required to be kept.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals shall be taken daily and records maintained on the form approved by the state health officer and maintained for a period of three years. The chlorine residual should be taken daily at the entry point of the distribution system (POE) and point of maximum residence time (MRT).

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The designated sample taps on this distribution system are threaded. The sample taps are to be smooth-nozzle taps. See <b>Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
2005231-001 - FAITH DAY SCHOOL WELL	Source	One of the pressure gauges is in disrepair. See <b>Attachment #3</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is strongly recommended that the water system develop and implement a written flushing program. The water distribution system should be flushed as necessary to reduce stagnant water and sediment build-up. Unidirectional and directional flushing are more effective than spot flushing.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

"An Equal Opportunity Employer"

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
2005253-001 - FISHERMAN'S ONE STOP WELL	Source	All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, shall be upstream of the well discharge line check valve and shall terminate in a downward direction. Sample tap cannot be of swivel design or of mixing water. See <b>Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
2005253-001 - FISHERMAN'S ONE STOP WELL	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. Open hole into well where silicone did not cover wiring. Casing is rusted and split. See <b>Attachment #1</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Copies of monitoring plans developed pursuant to this part shall be kept for the same period of time as the records of analyses taken under the plan are required to be kept under paragraph (a) of this section, except as specified elsewhere in this part. 40CFR 141.33(f). No records kept.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Disinfectant Residual Monitoring in Treatment Plant. A public water system (PWS) shall measure the residual disinfectant concentration within the distribution system at least once per day. Daily MRT sampling is not done.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Copies of any written reports, summaries or communications relating to sanitary surveys of the system conducted by the system itself, by a private consultant, or by any local, State, or Federal agency, shall be kept for a period not less than 10 years after completion of the sanitary survey involved. 40CFR 141.33(c). No records kept
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Records of actions taken by the system to correct violations of primary drinking water regulations shall be kept for a period not less than 3 years after the last action taken with respect to the particular violation involved. 40CFR 141.33(b). No records kept.

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Records of microbiological analyses and turbidity analyses made pursuant to this part shall be kept for not less than 5 years. Records of chemical analyses made pursuant to this part shall be kept for not less than 10 years. 40CFR 141.33(a). No records are kept on file at system.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water supply must provide suitable taps which draw water directly from the mains or the service lines. Such taps provide for samples which are most representative of the quality of water provided without "interference" which may be caused by plumbing problems within residences or other structures. Use of such taps decreases the chance of "bad samples" resulting in a coliform maximum contaminant level (MCL) violation which requires public notification by the public water supply and an administrative enforcement action by the EPA/DHH against the public water supply. Sample taps are not approved sample taps.
FACILITY	CATEGORY	FINDINGS
2005253-001 - FISHERMAN'S ONE STOP WELL	Source	The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained. System does not use a flow meter.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	Deficiencies sited in enforcement survey on 4/13/2018 were not completed
FACILITY	CATEGORY	FINDINGS
Management	Security	All public water supply wells, treatment units, tanks, etc., shall be located inside a fenced area that is capable of being locked See <b>Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	Other than surface water intakes, all critical water supply facilities for community water systems shall be protected to at least the 100-year flood elevation. Use of a levee system or flood walls are acceptable.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	No public water supply shall be hereafter constructed, operated or modified to the extent that the capacity, hydraulic conditions, functioning of treatment processes, or the quality of finished water is affected, without, and except in accordance with the plans and specifications for the installation which have been approved, in advance, as part of a permit submitted by the person having responsible charge of a municipality owned public water supply or by the owner of a privately owned public water supply. The permit shall be issued by the state health officer prior to the start of such construction or modification.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	All potable water pipes, pipe related products and materials that join or seal pipes and pipe related products shall be evaluated and listed as conforming with a national consensus product (or material) standard, ANSI/NSF Standard 61, and NSF/ANSI 372. See <b>Attachment #8</b>

FACILITY	CATEGORY	FINDINGS
HD001 - MR. C'S	Finished Water Storage	The minimum storage capacity (or equivalent capacity) for systems not providing fire protection shall be equal to the average daily consumption. At time of survey no storage capacity after treatment was located. <b>See Attachment #11</b>
FACILITY	CATEGORY	FINDINGS
2005277-001 - MAGOOS BAR WELL	Source	Every potable water well, and the immediate appurtenances thereto that comprise the well, shall be located at a safe distance from all possible sources of contamination, including but not limited to, privies, cesspools, septic tanks, subsurface tile systems, sewers, drains, barnyards, and pits below the ground surface. The horizontal distance from any such possible source of pollution shall be as great as possible, but in no case less than the following minimum distances, except as otherwise approved by the state health officer.
FACILITY	CATEGORY	FINDINGS
2005277-001 - MAGOOS BAR WELL	Source	All potable water supply wells shall be provided with a readily accessible faucet or tap on the well discharge line at the well for the collection of water samples. The faucet or tap shall be of the smooth nozzle type, Faucet was threaded. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
2005277-001 - MAGOOS BAR WELL	Source	All potable water well casings shall be vented to atmosphere
FACILITY	CATEGORY	FINDINGS
2005277-001 - MAGOOS BAR WELL	Source	No cesspool, privy or other place for the deposit or storage of human excrement shall be located within 50 feet of the high water mark of any reservoir, stream, brook, or other watercourse flowing into any reservoir, and no place of this character shall be located within 250 feet of the high water mark of any reservoir or watercourse as above mentioned, unless such receptacle is so constructed that no portion of the contents can escape or be washed into the reservoir or watercourse.
FACILITY	CATEGORY	FINDINGS
2005277-001 - MAGOOS BAR WELL	Source	Permanent casing for all groundwater sources shall project at least 12 inches above the pump house floor or concrete apron surface and at least 18 inches above final ground surface. <b>See Attachment #5</b>
FACILITY	CATEGORY	FINDINGS
2005277-001 - MAGOOS BAR WELL	Source	Protection from physical damage shall be provided as required by the reviewing authority. <b>See Attachment #7</b>
FACILITY	CATEGORY	FINDINGS
2005277-001 - MAGOOS BAR WELL	Source	The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.
FACILITY	CATEGORY	FINDINGS
2005277-001 - MAGOOS BAR WELL	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. <b>See Attachment #3</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Complete daily records of the operation of a public water system, including reports of laboratory control tests, shall be kept and retained as prescribed in the National Primary Drinking Water Regulations on forms approved by the state health officer. When specifically requested by the state health officer or required by other requirements of this Part, copies of these records shall be provided to the office designated by the state health officer within 10 days following the end of each calendar month. Additionally, all such records shall be made available for review during inspections/sanitary surveys performed by the state health officer.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Disinfectant Residual Monitoring in Treatment Plant. A public water system (PWS) shall measure the residual disinfectant concentration within the distribution system at least once per day.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	Main switch gear electrical controls shall be located above grade, in areas not subject to flooding. All electrical work shall conform to the requirements of the National Electric code or to relevant state and/or local codes. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
TP001 - MAGOOS BAR	Treatment	Sample taps shall be provided so that water samples can be obtained from appropriate locations in each unit of operation of treatment, and from the finished water. Taps shall be consistent with sampling needs and shall not be of the petcock type. Taps used for obtaining samples for bacteriological analysis shall be of the smooth-nosed type without interior or exterior threads, shall not be of the mixing type, and shall not have a screen, aerator, or other such appurtenance. <b>See Attachment #10</b>
FACILITY	CATEGORY	FINDINGS
TP001 - MAGOOS BAR	Treatment	Tanks and tank refilling line entry points shall be clearly labeled with the name of the chemical contained. <b>See Attachment #9</b>
FACILITY	CATEGORY	FINDINGS
2005277-001 - MAGOOS BAR WELL	Source	The discharge piping shall be protected against the entrance of contamination. <b>See Attachment #6</b>
FACILITY	CATEGORY	FINDINGS
2005277-001 - MAGOOS BAR WELL	Source	The discharge piping shall where applicable, be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Capitol Region II  
Attn: Ryan Farlow, R.S.  
P. O. Box 4489, Bin #10, Bienville Bldg  
Baton Rouge, Louisiana 70821-4489

The following compliance history is provided for your information

### **Bacteriological Sampling History**

#### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

### **Violation History**

#### **Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

#### **Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 225-342-9163.

Respectfully,

Bordelonville, LA 71320

Re: Class I Sanitary Survey  
AVOYELLES PARISH WATERWORKS DISTRICT 1 Public Water System  
PWS ID LA1009002  
AVOYELLES Parish

Dear Mr. Bordelon:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 11, 2018 sanitary survey inspection of the public water supply system for AVOYELLES PARISH WATERWORKS DISTRICT 1 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### **Parties Present**

<b>Name</b>	<b>Organization</b>
Matthew Page	Ldh Oph Engineering Services
Keith Mayeux	Avoyelles Waterworks Dist No 1

#### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

No observations were recorded in this category.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
GR002 - GROUND AT HAMBURG	Finished Water Storage	At the time of the inspection the overflow did not have a screen in place. Replace the missing, or add a new screen to the overflow to prevent anything from entering the tank through the overflow.
FACILITY	CATEGORY	FINDINGS
GR006 - GROUND AT REXMER # 2	Finished Water Storage	At the time of the inspection the overflow was within the 12-24 inches of the splash pad. The splash pad needs to be lowered or the overflow raised to ensure it is between 12-24 inches above the ground surface.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is the recommendation of the Department of Health that all storage facilities be inspected, cleaned, repaired, repainted, or replaced every 3-5 years or as needed.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1009003-003 - WELL 2	Source	The packing gland was leaking excessively. The packing gland needs to be tightened to prevent contamination. See Attachment #5
FACILITY	CATEGORY	FINDINGS
1009003-002 - WELL 1	Source	The packing gland was leaking excessively. The packing glade needs to be tightened to prevent contamination. See Attachment #4

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	Water pooled at sample site. The system shall provide proper water drainage for sample site. See Attachment #6
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED AT PLANT YARD	Finished Water Storage	The area around the storage tank is excessively wet. This area must be well drained to facilitate the rapid removal of water within a 50' radius of the storage tank. The ponding water presents a potential source of contamination and potentially compromise the integrity of the structure. See Attachment #1
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED AT PLANT YARD	Finished Water Storage	The pipes from the EST show corrosion. The system shall protect the surface by painting or other protective coating. See Attachment #2

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and

include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP002 - DISINFECTION WELL 1 AND 2	Treatment	The cylinders are not restrained individually. The water system shall chain all the cylinders individually. See Attachment #3

FACILITY	CATEGORY	FINDINGS
EL-002 Elevated Tank 6380 Hwy 107	Security	The vegetation needs to be cleared from the fence line. See Attachments #7 and 8

*In accordance with the provisions found in LA ACT No. 292, PWS shall maintain a record of each complaint it receives by telephone, letter, or electronic mail from customers or users. The record of each complaint shall include the date the complaint was received, the service connection to which the complaint relates, the name of the customer or user making the complaint and associated contact information, and a brief description of the complaint. The log containing the record shall also include documentation of corrective actions that PWS has implemented with respect to the matters detailed in the complaint. PWS shall retain the complaint records for at least five years, and shall make the records available to the Louisiana Department of Health upon request and without charge. Within 60 days of receipt of this survey develop and implement a complaint log.*

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The end of the overflow pipe is fitted with a flapper but not a screen. The overflow pipe must be screened with a four mesh non-corrodible screen.
FACILITY	CATEGORY	FINDINGS
1009004-003 - WELL HARPER III R1112	Source	The air release-vacuum relief valve was screened but did not terminate in a downward position. Please fix the air release-vacuum relief valve to terminate in a downward direction at least 18 inches above the floor.
FACILITY	CATEGORY	FINDINGS
1009004-001 - WELL GLASS II R1190	Source	The well discharge piping is showing signs of rust, corrosion, and flaky painting. The well discharge piping must be cleaned, treated, and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written**

**confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

The elevated and ground storage tanks should be inspected, cleaned and painted on a three to five year cycle.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services  
Northeast Region VIII Office  
Attn: Tyler Lollis,  
1650 Desiard St., 2<sup>nd</sup> Floor  
Monroe, Louisiana 71201

The following compliance history is provided for your information.

**Bacteriological Sampling History**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 318-361-7210.

Respectfully,

Re: Class I Sanitary Survey  
Fifth Ward Water System  
PWS ID #: LA 1009007  
Avoyelles Parish

Dear Mr. Brouillette:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 31, 2018 sanitary survey inspection of the public water supply system for the Fifth Ward Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Hayden K. Keigley	LDH/OPH Region 4 Engineering
Ebenezer Omojola	LDH/OPH Region 4 Engineering
Cody Gray	Fifth Ward Water System
Don Turner	Fifth Ward Water System

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

No unresolved observations were recorded in this category.

### **Significant Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 Distribution System	Distribution System	The water system does not have an up-to-date list of customers on file for its cross connection control program. Current annual test reports for the backflow prevention devices could not be confirmed. A customer listing should be compiled showing applicable customers and installed devices. All cross connection control devices must be tested annually by a certified tester. These annual test reports must be kept on file for review by LDH during sanitary surveys or site visits.

### **Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR005 Ground Storage Tank #5 (West Tank)	Finished Water Storage	From review, the ground storage tank should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storage's interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facility could benefit from an inspection.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR006 Ground Storage Tank #6 (East Tank)	Finished Water Storage	The overflow piping for the ground storage tank terminates too close to the natural ground surface. A splash plate must be provided for the overflow piping to prevent erosion of the foundation. The discharge outlet must be installed at an elevation between 12 and 24 inches above a splash plate. Install a splash plate to receive the discharge from the outlet and modify the existing overflow piping to maintain an adequate elevation above the splash plate.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL002 Elevated Tower #2 (North Tower)	Finished Water Storage	The splash plate for the elevated tower's overflow is not effective and does not allow for appropriate discharge of the tower's overflow with proper drainage away from the tower's foundation. The splash plate must be addressed with proper grading away from the tower's foundation to prevent erosion around the foundation of the tower that could compromise the structural integrity of the tower.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP006 Treatment Plant	Treatment	The chemical feed tank is not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP006 Treatment Plant	Treatment	The light in the chlorine room is currently not operational. Either the bulb is burnt or there is an electrical issue. The chlorine room must be equipped with a working light.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1009007-004 Well #4 Roy Lane (East Well)	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1009007-006 Well #6 Ed Carrol Road	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of rusting and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion and deterioration. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP006 Treatment Plant	Treatment	The chlorine feed room is not equipped with an inspection window. A shatter resistant inspection window is required where chlorine gas is fed.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Hayden K. Keigley, P.E.  
825 Kaliste Saloom Road  
Brandywine 3, Suite 100  
Lafayette, LA 70508

The following compliance history is provided for your information:

### **Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at (337) 262-5634.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals monthly at the approved ACR location using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" (Report #3) which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, ACR chlorine residual forms. Please note that one form can be used to record data points for multiple consecutive months.
FACILITY	CATEGORY	FINDINGS
EL002 - NEW ELEVATED TANK	Finished Water Storage	From review, the elevated tower should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the elevated tower's interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the elevated tower could benefit from an inspection.

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

**No observations were recorded in this category.**

**Deficiencies**

**No observations were recorded in this category.**

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

1. LDH recommends all water storage tanks be cleaned, inspected, and if needed, repaired, and painted on a 3-5 year cycle. The water system should plan for preventative maintenance. If the system has not already implemented a rotation cycle for preventative maintenance at the storage tanks, the Town must implement a plan.
2. The insulation on the piping at the elevated storage tank showed signs of wear and deterioration. In order to properly protect the piping from the elements, the insulation must be removed and new insulation utilized to replace it.
3. There was a pit near the base of the elevated tank. The pit was free of any surface water. However, it was not covered. This pit may create a hazard for water system personnel. The water system should consider grating over the pit.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

PWS ID LA1009013  
AVOYELLES Parish

Dear Mr. St Romain:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 30, 2018 sanitary survey inspection of the public water supply system for TOWN of PLAUCHEVILLE WATER SYSTM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

#### Name

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	THERE WAS A GAP UNDER THE FENCE AT THE ELEVATED TANK AT WARD 8. THE FENCE NEEDS TO BE REPAIRED TO PREVENT ENTRY TO THE TANK YARD.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	THE SYSTEM WAS NOT USING THE APPROVED FORMS FOR DAILY CHLORINE MONITORING. THE PROPER FORMS MUST BE USED AND STORED FOR VERIFICATION BY STATE HEALTH PERSONNEL.
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED BRASSETTE LN	Finished Water Storage	VENT PIPING AT ELEVATED TANK ON BRASSETTE NEEDS TO BE SCREENED.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

Act. No. 292 requires community water systems to establish and maintain records of complaint and establish a flushing program. It is imperative your system establish and maintain these records.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

#### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

#### **Significant Deficiencies**

**No observations were recorded in this category.**

### Deficiencies

FACILITY	CATEGORY	FINDINGS
GR002 - GROUND AT WELLS	Finished Water Storage	The overflow on the ground storage tank was less than 12 inches above the ground surface. Relocate the overflow to be between 12-24 inches above the ground surface.
FACILITY	CATEGORY	FINDINGS
1009015-002 - WELL 2	Source	The 24 mesh screen was missing at the time of inspection. Replace the screen on the air release-vacuum with a 24 mesh corrosion resistant screen to ensure nothing can enter the valve and possible the drinking water.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is the recommendation of the Department of Health that all storage facilities be inspected, cleaned, repaired, repainted, or replaced every 3-5 years or as needed.

### Written Response Required

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system failed to update their monitoring plan when they changed/relocated the ACR and MRT sites and added a POE at the Hwy 114 plant. The system shall update the monitoring plan to reflect the changes that have been implemented.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Records of disinfectant residual monitoring were incomplete. Several months of the daily disinfectant residual monitoring forms were missing from 2017 and 2018.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system has no records of calibrations/validations for the bench top colorimeter. A calibration/validation log shall be created and made available for review during inspections and sanitary surveys.
FACILITY	CATEGORY	FINDINGS
GR005 - GROUND AT COCOVILLE	Finished Water Storage	The overflow pipe on the GST did not have a screen. The water system shall obtain and install the proper screen for the overflow pipe. See Attachment #1

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to

correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

Dear Ms. DeSoto:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the November 7, 2018 sanitary survey inspection of the public water supply system for SPRING BAYOU WATER WORKS DISTRICT (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

Name	Organization
Jennifer Kihlken	LDH/OPH/Engineering Services
Patrick Bordelon	Spring Bayou Waterworks Dist.
Rachael Bruce	LDH/OPH/Engineering Services Region 6
William Charlot	LDH/OPH/Engineering Services Region 6

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
11/12/2015	05/16/2016	Sanitary Survey, Finished	Minor	System Management and Operation	Management
<b>Comments:</b> A public water system shall measure the residual disinfectant concentration within the distribution system at least once per day. The water system is to measure and record the chlorine reading every day.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The water system was not operated and under the control of a duly certified operator. The water system must contract with or employ an operator holding a minimum certification of Class 1 Water Distribution license.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system had attempted to prepare a cross connection control program (CCCP). However, the CCCP requires more information and oversight than was included in the proposed plan. The water system must prepare a CCCP that includes documentation of compliance with the containment practices and maintenance/field testing requirements and demonstrate implementation of the program. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, the water system shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system was not recording the chlorine residual at the Point of Entry (POE) daily. The water system must begin daily POE monitoring. All sample results must be recorded on the attached POE monthly operating report (MOR) and submitted to the Region 6 LDH OPH Engineering Office by the 10th of the following month (example: September 2018 report is submitted by October 10, 2018)
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data	The water system was not sampling the maximum

	Verification	residence time location (MRT) daily and the additional chlorine residual location (ACR) monthly. The water system must begin daily chlorine residual monitoring at the MRT and monthly chlorine residual monitoring at the ACR site. The water system must record the residuals on the attached forms and submit the reports to the Region 6 LDH OPH Engineering Office monthly by the 10th of the following month (example: Monthly reports for September 2018 would be submitted by October 10, 2018.)
--	--------------	--

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - DISINFECTION	Treatment	A single chain restrained the chlorine cylinders. The cylinders should be restrained separately to prevent possible upset.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Central Region VI  
Attn: William Charlot, E. I.  
5604-B Coliseum Blvd.  
Alexandria, Louisiana 71303

The following compliance history is provided for your information

#### **Bacteriological Sampling History**

##### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

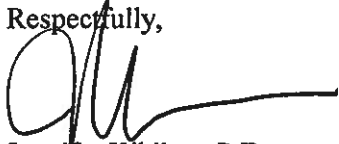

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3231.

Respectfully,

Dear Mr. Lemoine:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the November 8, 2018 sanitary survey inspection of the public water supply system for AVOYELLES WATER COMMISSION (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

**Name**

Danny Mortimer  
Michael Marcotte

**Organization**

OPH Region VII Engineering  
Avoyelles Water Commission

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.  
Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1009021-005 - WELL A 1	Source	The ground around the well slab at Well A1 exhibited signs of erosion leaving gaps under the slab. The ground around the well must be graded to prevent the possibility of contamination from under the slab.
1009021-006 - WELL B 1	Source	The ground around the well slab at Well B 1 exhibited signs of erosion leaving gaps under the slab. The ground around the well must to be graded to prevent the possibility of contamination from under the slab.

**Deficiencies**

**No observations were recorded in this category.**

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - DISINFECTION	Treatment	The chlorine cylinders were not chained to prevent upset. The cylinders need to be restrained.

Act. No. 292 requires community water systems to establish and maintain records of complaints and establish a flushing program. It is imperative your system establish and maintain these records.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII  
Attn: Danny Mortimer, R.S.  
1525 Fairfield Ave. Room 569  
Shreveport, Louisiana 71101

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 318-676-7432.

Respectfully,

Danny Mortimer

CITY of DERIDDER WATER SYSTEM Public Water System  
PWS ID LA1011001  
BEAUREGARD Parish

Dear Mayor Clanton:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the November 21, 2018 sanitary survey inspection of the public water supply system for CITY of DERIDDER WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Thomas Dearing	City Of Deridder Water System

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	Ampacet Drive Plant: 1. The chlorine injection point has a leak. The leak must be repaired to ensure proper disinfection. 2. There is a leaking control valve. The leaking control valve must be repaired to prevent possible contamination.
FACILITY	CATEGORY	FINDINGS
Management	Other	The comment is applicable to ALL plant locations. The fluoride being used in water treatment has a direct connection with the bulk storage tank and with potable water being used to dilute the chemical. Valves are being used to control the flow of water and chemical through a common pipe where water and chemical are delivered independently to the day tank. The common pipe discharges directly to the day tank without the means of an air gap. Fluoride must be handled with great care in water treatment. Safeguards must be employed to prevent the possibility of overfeeding which can be lethal. Please consult with the water system's engineer to properly modify the existing set-up to eliminate cross connections and employ proper protective measure required for feeding fluoride.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	1. There is a hose bib with an attached hose at the Ampacet Drive plant location near the fluoride bulk tank that does not have an atmospheric vacuum breaker installed. Install an atmospheric vacuum breaker on the hose bib. The hose should be removed and stored when not being used. Additionally, the placement of a control valve on the hose downstream of the atmospheric vacuum breaker can void the installed protection. 2. All hose bibs where water is supplied for plant activities must be equipped with atmospheric vacuum breakers.
FACILITY	CATEGORY	FINDINGS
1011001-001 - WELL #1 - MAIN PLANT	Source	The air release-vacuum relief valve is connected to a hose with a submerged end that rest in the receiving basin of the well's prelube discharge. The hose creates a cross connection and must be removed. Based on conversations during the survey, the hose was added to manage discharge from the air release-vacuum relief valve when the well is running. The air release-vacuum relief valve should not leak after an initial discharge during start-up. The air release-vacuum relief valve appears to be broken and in need of replacement. Replace or repair the air release-vacuum relief valve.

FACILITY	CATEGORY	FINDINGS
1011001-004 - WELL #6 - BILBO ST.	Source	The area around the well is excessively wet. The area around the well must be well-drained and facilitate the rapid removal of water within a 50 foot radius of the well. The ponding water presents a potential source of contamination. (The sample tap was observed leaking/running during the sanitary survey and may be the cause of the ponding water.) Eliminate any sources that can contribute to the negative drainage environment and make sure the area is effectively grade to promote positive drainage.
FACILITY	CATEGORY	FINDINGS
1011001-004 - WELL #6 - BILBO ST.	Source	The well is equipped with a smooth nosed sampling tap that has a broken control valve. The well must be equipped with a working smooth nosed sampling tap to facilitate the collection of water samples.
FACILITY	CATEGORY	FINDINGS
1011001-005 - WELL #7 - AMPACET DR.	Source	The well's casing vent is not covered by a 24 mesh, corrosion resistant screen. The well's casing vent must be covered by a 24 mesh, corrosion resistant screen.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. All ACR points must be checked at least once monthly and recorded on Report #3. These four sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals at the four approved locations as described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 5 Office a copy of Report #3 for the next three (3) months to support properly recorded chlorine residuals.
FACILITY	CATEGORY	FINDINGS
EL001 - EL- BILBO ST.	Finished Water Storage	The drain pipe for the elevated tower's discharge is piped to a depressed area that could allow for the pipe inlet to be submerged, if erosion continues from overland flow in this area. Add material and grade the area to allow for drainage without erosion. The overflow pipe should be directed pass the graded slope to discharge over the adjacent roadway.

FACILITY	CATEGORY	FINDINGS
GR003 - GR-AMPACET DR.	Finished Water Storage	The drainage inlet structure for the ground storage tank's overflow is not effective and does not allow for appropriate discharge of the tank's overflow without eroding the area around the tank's foundation. The eroded area near the drainage inlet structure must be properly filled and graded. Impervious material should be considered to combat future erosion. Proper management of this area around the tank's foundation is needed to prevent erosion that could compromise the structural integrity of the tank.
FACILITY	CATEGORY	FINDINGS
GR004 - GR-MAYS ST.	Finished Water Storage	The splash plate for the ground storage tank's overflow is not effective and does not allow for appropriate discharge of the tower's overflow with proper drainage away from the tower's foundation. The splash plate boundaries must be addressed. Proper grading away from the tower's foundation is needed to prevent erosion around the foundation of the tower that could compromise the structural integrity of the tower.
FACILITY	CATEGORY	FINDINGS
EL001 - EL-BILBO ST.	Finished Water Storage	The existing screen for the elevated tower overflow pipe is damaged. The overflow piping must be screened with a four mesh, non-corrodible screen. Replace the damaged screen with a new four mesh, non-corrodible screen to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
GR003 - GR-AMPACET DR.  GR004 - GR-MAYS ST.	Finished Water Storage	The screen for the ground storage overflow pipe is broken. The overflow pipe must be screened with a twenty-four mesh, non-corrodible screen. Replace the damaged screen to provide sanitary protection at all times.
FACILITY	CATEGORY	FINDINGS
EL001 - EL-BILBO ST.  EL002 - EL-MAYS ST.	Finished Water Storage	The splash plate for the elevated tower's overflow is not effective and does not allow for appropriate discharge of the tower's overflow with proper drainage away from the tower's foundation. The splash plate boundaries must be addressed. Proper grading away from the tower's foundation is needed to prevent erosion around the foundation of the tower that could compromise the structural integrity of the tower.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1 - MAIN PLANT  TP003 - TP FOR WELL #6 - BILBO	Treatment	The chemical feed tank for fluoride is not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.

TP004 - TP FOR WELL #7 - AMPACET		The chemical feed tank for fluoride is not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
TP008 - TP FOR WELL #8 - MAYS		
FACILITY	CATEGORY	FINDINGS
1011001-004 - WELL #6 - BILBO ST.	Source	The screening on the air release-vacuum relief valve is broken. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screen to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1011001-004 - WELL #6 - BILBO ST.	Source	The well is not equipped with a check valve. A check valve must be provided.
1011001-005 - WELL #7 - AMPACET DR.		
FACILITY	CATEGORY	FINDINGS
1011001-001 - WELL #1 - MAIN PLANT	Source	The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
1011001-004 - WELL #6 - BILBO ST.		
1011001-005 - WELL #7 - AMPACET DR.		

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At Main Plant: The phosphate injection point was/is leaking and has caused corrosion of the pipe flange where chemical is injected. Make sure the leak is properly addressed and clean, treat, and paint the water piping in the area of the leak to prevent further corrosion that may lead to possible sources of contamination.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1 - MAIN PLANT	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized. The water system currently uses automatic switch over between 2 - 150 lb. gas cylinders to guarantee continuous disinfection.
TP003 - TP FOR WELL #6 - BILBO		
TP004 - TP FOR WELL #7 - AMPACET		
TP008 - TP FOR WELL #8 - MAYS		
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1 - MAIN PLANT	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. The tap will be placed near the front door of the office adjacent to the building. There is a valve that appears to reflect the plant's discharge piping to the distribution system. A water main will be exposed and a smooth nosed sample tap will be established in this area. This task must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers.
FACILITY	CATEGORY	FINDINGS
TP003 - TP FOR WELL #6 - BILBO	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. The tap will be placed on the water main between the service pumps and the flowmeter. It will be aligned with the end of the slab supporting the serve pumps. The water main leading to the distribution system will be exposed and a smooth nosed sample tap will be placed. This task must be

		completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers.
FACILITY	CATEGORY	FINDINGS
TP008 - TP FOR WELL #8 - MAYS	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. The tap will be placed on the water main between the service pumps and the flowmeter. It will be aligned with the end of the slab supporting the serve pumps. The water main leading to the distribution system will be exposed and a smooth nosed sample tap will be placed. This task must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers.
FACILITY	CATEGORY	FINDINGS
TP004 - TP FOR WELL #7 - AMPACET	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. The tap will be placed on the water main between the service pumps and the flowmeter. The water main leading to the distribution system will be exposed and a smooth nosed sample tap will be placed. This task must be completed prior to the next POE sampling event by LDH. ### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

#### Unresolved Observations

Visit Date	Notify Date	Reason	Severity	Category	Facility
06/24/2016	06/24/2016	Sanitary Survey, Finished	Minor	Finished Water Storage	HD001-HYDROPNEUMATIC
<b>Comments:</b> From review the finished water storage facilities have never been inspected. Finished water storage facilities are generally inspected and maintained on a routine basis. An inspection period of 5 to 10 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior of finished water storage facilities could benefit from inspection.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
06/24/2016	06/24/2016	Sanitary Survey, Finished	Minor	Source	1011004-001-WELL #1
<b>Comments:</b> The well discharge piping is showing signs of rust, corrosion, and flaky painting. The well discharge piping must be cleaned, treated, and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
06/24/2016	06/24/2016	Sanitary Survey, Finished	Minor	Treatment	TP001-TP FOR WELL #1
<b>Comments:</b> The solution tank does not demonstrate proper protection against backflow events. Chemical solution tanks shall be properly protected from backflow as required. Provide provisions that the solution tank will be filled with water by means of an air gap and siphon/overfed control shall be provided for the chemical injection line.					

#### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	The connection from the lime hopper to the slurry tank is broken. The broken connection must be repaired to allow for proper transfer of chemicals and a clean water plant environment.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There is a hose bib with an attached hose near the phosphate tank that has an atmospheric vacuum breaker installed. The placement of the control valve on the hose downstream of the atmospheric vacuum breaker voids the installed protection. Remove the control valve and/or hose when not being used.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1	Treatment	The water system has only one chlorine gas cylinder installed. Systems that require chlorination to protect the water supply must have secondary gas cylinder installed. Install a second chlorine gas cylinder with scale to provide for continuous chlorine injection and continuous disinfection. (Currently, the water system's operator has a process to change the cylinder ahead of expiration, based on the scale readings. One bottle can last the water system for 90 days.)
FACILITY	CATEGORY	FINDINGS
1011004-001 - WELL #1	Source	There is currently no pressure gauge installed on the discharge piping of the well. A pressure gauge must be installed on the discharge piping upstream of the check valve as a means to measure the actual operating head conditions. Install a pressure gauge on the well discharge piping to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Dear Responsible Party:

The Louisiana Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 22, 2017 RTCR Level 2 Assessment of the public water supply system for Beauregard Water Works Dist. #3 Water System. The intent of this assessment, in response to multiple positive total coliform samples in a running 12 month period, is to locate sanitary defects the could infer with the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code.

**Parties Present**

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Kyle Mills	Beauregard WW Dist. #3

The RTCR Level 2 Assessment form is enclosed with this letter. Please review the findings of the assessment report. The sanitary defects listed in the table, starting on page 4 of the RTCR Level 2 Assessment Form titled "Issue Descriptions and Corrective Actions" must be corrected and a written response submitted to the department within 30 days of the RTCR Level 2 Assessment triggered on October 19, 2018. The response is due on or before November 19, 2018. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these sanitary defects, then the written response must also contain a request with specific dates when the sanitary defects will be corrected.

Re: Level 2 Assessment triggered on October 19, 2018  
Beauregard Water Works Dist. #3 Water System  
PWS ID LA1011008  
Beauregard Parish

**Written Response Required**

Send written responses and confirmation regarding findings of the RTCR Level 2 Assessment to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Steven R. Joubert, P.E.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3214.

Respectfully,

Steven R. Joubert, P.E.  
District III Engineer

**III. Assessment Questions**

**A. Source – Well**

*\*If PWS does not use a well source check here and skip to subsection B ☐*

<b>Which well sources were not used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Was a new source activated?		X		
2. Is the ground graded to prevent surface water flow towards the well?	X			
3. Does the well casing extend at least 18" above the ground?	X			
4. Is the exposed portion of the well casing in good condition?	X			
5. Does the well have a secured sanitary seal well cap?	X			
6. Is the sanitary seal well cap vented and screened?	X			
7. Is there a down turned well vent that is at least 24 inches above the ground surface?	X			
8. Are appropriate backflow prevention devices installed, maintained and tested on all cross connections?	X			
9. Does raw water quality data indicate changes to the source water quality?		X		
10. Has source yield changed?		X		
11. Are there obvious sources of contamination in the vicinity of the well?		X		
12. Was the well pump recently repaired or replaced?		X		
13. Are there signs of vandalism at the well?		X		
14. Have there been any unusual weather events that may have impacted the well?		X		
15. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the well?		X		
16. Are there any issues with well appurtenances?		X		

**Assessor Name: Steven R. Joubert, P.E.**

**B. Source – Surface Water**

*\*If PWS does not use a surface water source check here and skip to subsection C ☒*

<b>Which surface water sources were used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Is the surface water intake screened and maintained?				
2. Is the pump house protected from unauthorized personnel?				
3. Does raw water quality data indicate changes to the source water quality?				
4. Are there obvious sources of contamination within the nearby watershed?				
5. Are there signs of vandalism at the surface water intake?				
6. Have severe weather events such as heavy rainfall, rapid snowmelt, drought, or reservoir turnover occurred?				
7. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the source?

**C. Treatment Processes**

Questions:	YES	NO	N/A	Unk.
1. Have there been interruptions in any treatment processes?		X		
2. Has the treatment plant(s) or finished water pump(s) experienced any power interruptions?		X		
3. Has there been any recent installation or repair of treatment equipment?		X		
4. Have there been changes to any treatment processes?		X		
5. Does water quality data indicate inadequate/inappropriate treatment of water?		X		
6. Are all treatment processes operational and maintained?	X			
7. Is there an air gap between treatment instrumentation and waste lines?	X			
8. Were there any failures to meet required CT values?		X		
9. Did treatment plant flow rates exceed the permitted capacity?		X		
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?			X	
11. Did a review of the turbidity data reveal any anomalies?			X	
12. Did a review of chlorine residual data reveal any anomalies or deficiencies?		X		

**Assessor Name: Steven R. Joubert, P.E.**

**D. Distribution System**

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?		X		
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?			X	
3. If samples were collected from inside a building, does the site have additional water treatment installed?			X	
4. Is there evidence that the system experienced low or negative pressure?		X		
5. Was there any scheduled flushing of the distribution system?		X		
6. Are pump stations protected from unauthorized personnel?	X			
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?	X			
8. Are air relief valves maintained and operational without leaks?			X	
9. Are pump stations maintained and equipment operational?	X			
10. Are fire hydrants and blow offs maintained and operational without leaks?	X			
11. Does water quality data collected in the distribution system show results indicative of an issue?	X			
12. Have any water related customer complaints been received?		X		
13. Is there any evidence of intentional contamination in the distribution system?		X		
14. Are there any known leaks?		X

Rev. 3/2017

**E. Storage Tanks**

*\*If no storage tank check here and skip to section IV. ☐*

Questions:	YES	NO	N/A	Unk.
1. Is the pressure tank maintaining an appropriate minimum pressure?	X			
2. Are all vents and overflow pipes screened?	X			
3. Is the tank maintained and free of rust, holes and leaks?	X			
4. Are there any unsealed openings in the storage facility such as access doors, vents or joints?		X		
5. Are signs of vandalism visible?		X		
6. Are roof hatches and manhole openings tightly covered and locked?	X			
7. Do downspouts and overflow pipes drain water away from structure?	X			
8. Have all storage tanks been inspected and cleaned within the last 5 years?				X

**Assessor Name: Steven R. Joubert, P.E.**

**IV. Water Quality Data Table**

Parameter	Number of Each Sample Type Collected		
	Raw	Entry Point	Distribution
Chlorine Residual (mg/L)		POE-001 – 1.31ppm	RPUP, 1.62 ppm TCR-047, 1.20ppm RPDN, 1.41ppm
Turbidity (NTU)			
Coliform Bacteria

Office of Public Health

August 10, 2018

Earl Franks  
BEAUREGARD WATER DISTRICT #5  
3189 Hwy 389  
Merryville, LA 70653

Re: Class I Sanitary Survey  
BEAUREGARD WATER DISTRICT #5 Public Water System  
PWS ID LA1011009  
BEAUREGARD Parish

Dear Mr. Franks:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 6, 2018 sanitary survey inspection of the public water supply system for BEAUREGARD WATER DISTRICT #5 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
Dale Franks	Beauregard Water District No 5

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

No observations were recorded in this category.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #2, #3	Treatment	There is no secondary containment provided for the hypochlorite and phosphate chemicals being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment for the hypochlorite and phosphate solution tanks with sufficient containment volumes respectively.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### Written Response Required

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Solomon Angwafo, E.I.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3232.

Respectfully, 

Solomon Angwafo, E.I.  
Engineer Intern

Re: Class I Sanitary Survey  
PACKAGING CORP of AMERICA - DERIDDER Public Water System  
PWS ID LA2011002  
BEAUREGARD Parish

Dear Mr. Butaud:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 5, 2018 sanitary survey inspection of the public water supply system for PACKAGING CORP of AMERICA - DERIDDER (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
Morgan Boyette	Packaging Corporation of America
Timothy Byrd	Packaging Corporation of America

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The Reduced Pressure Zone device for Well 32 was leaking excessively at the time of the survey. This device must be repaired and tested for proper functionality.
FACILITY	CATEGORY	FINDINGS
2011002-002 - WELL #32	Source	The wiring entering the well casing creates a void. This void can provide for possible entrance of foreign substances into the well casing that could lead to bacteriological contamination. Eliminate this void on the well casing to prevent any possible bacteriological contamination.

### Minor Deficiencies

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

Deridder, LA 70634

Re: Class I Sanitary Survey  
INGEVITY SOUTH CAROLINA - DERIDDER WS Public Water System  
PWS ID LA2011029  
BEAUREGARD Parish

Dear Mr. Crain:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 5, 2018 sanitary survey inspection of the public water supply system for INGEVITY SOUTH CAROLINA - DERIDDER WS (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
Tony Brown	Ingevity South Carolina
James (Greg) Crain	Ingevity South Carolina

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
2011029-001 - WELL #5	Source	The well is missing a sanitary seal, which appears to have been left out after some maintenance. The well casing alignment is out of order with an opening through which foreign substances could introduce contamination into the well casing. The well sanitary seal must be returned to its proper position and the casing alignment must be adjusted to provide a secure well casing seal void of any openings.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on LDH Approved Report 1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on LDH Approved Report 2. An additional chlorine residual check must be made monthly at the ACR site and recorded on LDH Approved Report 3. These points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. Additional chlorine residual checks are not being performed at the required ACR location. This location must be checked monthly and has been defined on the water system's approved monitoring plan. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Please start measuring and recording the residuals at the locations described using a digital chlorine analyzer. Residuals must also be recorded on signed and dated "LDH Approved Chlorine Residual Forms", which can be found at: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send to this office a copy of the next three (3) months of properly recorded, chlorine residual forms.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

### **FORMAL CROSS CONNECTION CONTROL SURVEY**

Louisiana Revised Statute 40:4.12.b.1.c.iii requires that a formal cross connection control survey be performed by a "qualified individual". This office recommends that the formal cross connection control survey be conducted by an individual/entity formally trained in cross connection identification and control measures.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V

Re: Class I Sanitary Survey  
Arcadia Water System  
PWS ID LA1013003  
Bienville Parish

Dear Mayor Smith:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the January 26, 2018 sanitary survey inspection for Arcadia Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

Name	Organization
Zahira Tieso	LDH-OPH District IV Engineering
Joe Smith	Town of Arcadia

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

**No observations were recorded in this category.**

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL002 - EST #2, SECOND STREET	Finished Water Storage	The Second Street elevated tank is showing signs of rust on the exterior. The elevated tank needs be inspected, cleaned, repaired, and repainted.
FACILITY	CATEGORY	FINDINGS
1013003-003 - WELL #3	Source	Northeast side of the well #3 site has a small section of the fence damaged by fallen tree. The tree was removed, but the fence is still damaged. The section of the fence must be repaired or replaced.
FACILITY	CATEGORY	FINDINGS
1013003-008 - WELL #8	Source	Well #8 discharge piping is showing signs of rust, corrosion, and flaky painting. The well discharge piping must be cleaned, repaired, and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

The water system should implement a storage tank maintenance program that includes inspection, cleaning, repairs, and, if needed, painting of storage tanks on a 3-5 year cycle.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
Castor Water System  
PWS ID LA1013006  
Bienville Parish, Louisiana

Dear Mayor Pickett:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 12, 2018 sanitary survey inspection for Castor Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Zahira Tieso	LDH-OPH District IV Engineering
Roger Corley	Contract Operator

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Nitrification control plan was not available. Where a continuous chloramination method is used, a nitrification control plan must be developed and submitted to LDH/OPH Regional Office: Attn: Zahira Tieso, P.E. 1525 Fairfield Ave. Room 569 Shreveport, Louisiana 71101
FACILITY	CATEGORY	FINDINGS
1013006-002 - WELL #2	Source	The well #2 casing and discharge piping are showing signs of rust, corrosion, and flaky painting. The well casing and discharge piping must be cleaned, treated, and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	There was significant vegetation growth at the Ground Storage Tank site. Trim vegetation inside the fence and perform regular maintenance of the area.
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT HWY 4 ELEVATED TANK SITE	Treatment	The ventilating fan located in the chlorine building at the Main Plant on Hwy 4 was not working. The ventilating fan must be repaired or replaced.

### **Written Response Required**

Re: Water Treatment Plant Site Visit  
Gibsland Water System  
PWS ID LA1013008  
Bienville Parish

Dear Mayor Wilson:

The Department of Health and Hospitals would like to thank you and the site visit participants for the courtesy and assistance provided during the July 24, 2018 Water Treatment Plant inspection of the public water supply Gibsland Water System. These inspections are part of our program to ensure compliance with the EPA Code of Federal Regulations Title 40 Parts 141-142 and Title 51 of the Louisiana Administrative Code.

This letter provides a summary of items noted in previous sanitary surveys in addition to those noted during this water treatment plant survey. If significant deficiencies have been listed on the subsequent pages you are required to correct the deficiencies and provide written documentation of your corrective actions including the date(s) resolved. You may also request additional time beyond the 60 days in writing by providing a detailed plan of corrective action that includes proposed completion dates. Failure to respond to this letter in writing within 60 days of receipt may result in Enforcement Action.

Management	M&R and Data Verification	The Monthly Chorine Reports show that the disinfectant residual for the POE-001 at 3651 Franklin Rd. and the MRT-004 at 325 Bienville Parish Rd. 431 are not being recorded daily. The water system must check the chorine residuals daily at the POE-001 and MRT-004.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	Sample taps at the following locations had issues: TCR-005 at 178 Pine ST. is broken; TCR-008 at 2599 Lake Rd. was not found; MRT-004 at 325 Bienville Parish Rd. 431 is a flush hydrant. The sample taps at TCR-005, TCR-008, and MRT-004 must be installed. The water system must provide suitable taps which draw water directly from the mains.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND STORAGE TANK #2	Finished Water Storage	The overflow pipe screen of the ground storage tank located at Franklin Rd. was missing. The overflow pipe must be screened with twenty-four mesh non-corrodible screen.
FACILITY	CATEGORY	FINDINGS
1013019-002 - WELL #2, FRANKLIN ROAD	Source	The pressure gauge at well #2 located at Franklin Rd. was not working. The pressure gauge must be replaced.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to

correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

The water system should implement a storage tank maintenance program that includes inspection, cleaning, repairs, and, if needed, painting of storage tanks on a 3-5 year cycle.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII

CERTIFIED MAIL: 7015 1730 0001 9875 7313

April 13, 2018

Ms. Beverly Knotts, President  
Old Saline Community Water System  
225 Ronnie Road  
Castor, LA 71016

Re: Class I Sanitary Survey  
Old Saline Community Water System  
PWS ID LA1013020  
Bienville Parish

Dear Ms. Knotts:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 10, 2018 sanitary survey inspection for Old Saline Community Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

Name	Organization
Zahira Tieso	LDH-OPH District IV Engineering
Andy Freeman	Red River Power Solutions

**NOTICE OF VIOLATIONS**

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1013020-002 - WELL #2	Source	There was a gap between the drawdown tubing and the casing of Well #2. The gap on the casing must be sealed and the drawdown tube has to be maintained to prevent the introduction of contamination into the well casing and discharge piping.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
1013020-002 - WELL #2	Source	The well #2 that is located off Hoop Rd. did not have a vent. All potable water well casings must be vented to atmosphere. All potable water well vents must be constructed and installed in a way to prevent the entrance of contamination. All vent openings must be piped watertight to a point not less than 24 inches above the highest flood level which may have occurred in a 10-year period, but in no case less than 24 inches above the ground surface. Such vent openings cannot be less than 1/2 inch in diameter, with extension pipe firmly attached. The openings of the vent pipes must face downward and screened to prevent the entrance of foreign matter.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to

**this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

**RTCR Level 2 Assessment Form**

**Assessment Question** \_\_\_\_\_

**A. Source – Well**

*\*If PWS does not use a well source check here and skip to subsection B ☐*

<b>Which well sources were not used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Was a new source activated?		X		
2. Is the ground graded to prevent surface water flow towards the well?	X			
3. Does the well casing extend at least 18" above the ground?	X			
4. Is the exposed portion of the well casing in good condition?		X		
5. Does the well have a secured sanitary seal well cap?	X			
6. Is the sanitary seal well cap vented and screened?	X			
7. Is there a down turned well vent that is at least 24 inches above the ground surface?	X			
8. Are appropriate backflow prevention devices installed, maintained and tested on all cross connections?	X			
9. Does raw water quality data indicate changes to the source water quality?				X
10. Has source yield changed?				X
11. Are there obvious sources of contamination in the vicinity of the well?		X		
12. Was the well pump recently repaired or replaced?		X		
13. Are there signs of vandalism at the well?		X		
14. Have there been any unusual weather events that may have impacted the well?		X		
15. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the well?		X		

**Assessor Name: DANNY MORTIMER**

**B. Source – Surface Water**

*\*If PWS does not use a surface water source check here and skip to subsection C ☒*

<b>Which surface water sources were used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Is the surface water intake screened and maintained?				
2. Is the pump house protected from unauthorized personnel?				
3. Does raw water quality data indicate changes to the source water quality?				
4. Are there obvious sources of contamination within the nearby watershed?				
5. Are there signs of vandalism at the surface water intake?				
6. Have severe weather events such as heavy rainfall, rapid snowmelt, drought, or reservoir turnover occurred?				
7. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the source?

**RTCR Level 2 Assessment Form**

**C. Treatment Processes**

Questions:	YES	NO	N/A	Unk.
1. Have there been interruptions in any treatment processes?	X			
2. Has the treatment plant(s) or finished water pump(s) experienced any power interruptions?	X			
3. Has there been any recent installation or repair of treatment equipment?	X			
4. Have there been changes to any treatment processes?		X		
5. Does water quality data indicate inadequate/inappropriate treatment of water?				X
6. Are all treatment processes operational and maintained?		X		
7. Is there an air gap between treatment instrumentation and waste lines?			X	
8. Were there any failures to meet required CT values?				
9. Did treatment plant flow rates exceed the permitted capacity?				X
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?				X
11. Did a review of the turbidity data reveal any anomalies?			X	
12. Did a review of chlorine residual data reveal any anomalies or deficiencies?	X			

**Assessor Name: DANNY MORTIMER**

**D. Distribution System**

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?	X			
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?			X	
3. If samples were collected from inside a building, does the site have additional water treatment installed?			X	
4. Is there evidence that the system experienced low or negative pressure?		X		
5. Was there any scheduled flushing of the distribution system?		X		
6. Are pump stations protected from unauthorized personnel?	X			
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?	X			
8. Are air relief valves maintained and operational without leaks?	X			
9. Are pump stations maintained and equipment operational?			X	
10. Are fire hydrants and blow offs maintained and operational without leaks?	X			
11. Does water quality data collected in the distribution system show results indicative of an issue?				X
12. Have any water related customer complaints been received?		X		
13. Is there any evidence of intentional contamination in the distribution system?		X

Re: Class I Sanitary Survey  
TOWN of BENTON WATER SYSTEM Public Water System  
PWS ID LA1015002  
BOSSIER Parish

Dear Mr. Cathcart:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 4, 2018 sanitary survey inspection of the public water supply system for TOWN of BENTON WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

**Name**

Tiffany Roberson  
James Jackson

**Organization**

LDH Engineering Region 7  
Town Of Benton

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No cross connection plan was in place. All water systems shall have cross connection control plan and properly implement the plan.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED #1, INDUSTRIAL PARK	Finished Water Storage	The area under the sample tap was holding water. The area must be filled and leveled to prevent standing water.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	Recommend that system color codes pipes or label pipes to show direction of flow.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII  
Attn: Tiffany Roberson, R.S.  
1525 Fairfield Ave. Room 569  
Shreveport, Louisiana 71101

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

Sample ID	Type	Date	Comment	Chlorine Residual	
				Free	Total
S1705727-001	Routine	6/14/2017			1.920

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

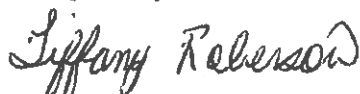

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 318-676-7867.

Respectfully,

Tiffany Roberson, R.S.  
Chemical Sanitarian

Re: Class 2 Follow-Up Sanitary Survey Site Visit  
CITY of BOSSIER CITY WATER SYSTEM Public Water System  
PWS ID LA1015004  
BOSSIER Parish

Dear Mayor Walker:

The Department of Health and Hospitals would like to thank you and the site visit participants for the courtesy and assistance provided during the December 20, 2018 Follow-Up Sanitary Survey inspection of the public water supply CITY of BOSSIER CITY WATER SYSTEM. These inspections are part of our program to ensure compliance with the EPA Code of Federal Regulations Title 40 Parts 141-142 and Title 51 of the Louisiana Administrative Code.

This letter provides a summary of items noted in previous sanitary surveys in addition to during this follow-up sanitary survey. If significant deficiencies have been listed on the subsequent pages you are required to correct the deficiencies and provide written documentation of your corrective actions including the date(s) resolved. You may also request additional time beyond the 60 days in writing by providing a detailed plan of corrective action that includes proposed completion dates. Failure to respond to this letter in writing within 60 days of receipt may result in Enforcement Action.

### **Violation History**

#### **Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

#### **Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

#### **Other Violations during the past year**

Violation Number	Violation Date	Violation Type	Compliance Period
------------------	----------------	----------------	-------------------

### **NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS**

Based upon review of the available records and visual examination of the facilities, the following deficiencies require your immediate attention.

#### **Unresolved Observations – Deficiencies cited during previous site visits**

No observations were recorded in this category.

#### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	Multiple City operations are located on the property site with the treatment plant. The security fence surrounding the property does not prevent unauthorized access to the treatment plant facilities. The water system facilities must be located inside of a continuous, climb-resistant fence that is at least six feet in height. A continuous internal fence, capable of being locked, must be constructed to prevent trespassing, vandalism, and sabotage of the water system facilities.

#### **Minor Deficiencies**

No observations were recorded in this category.

The deficiencies listed in the above table titled "**NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS**" must be corrected and a written response submitted to the department within 60 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the DHH-OPH Enforcement Units. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided by the Public Water System to the Surveying Office within 60 days of receipt of this letter with details regarding your corrective actions and any time extensions you may propose or you will be cited with a Treatment Technique violation which requires you to notify your consumers of the violation incurred.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
COUNTRY PLACE SUBD WATER SYSTEM Public Water System  
PWS ID LA1015005  
BOSSIER Parish

Dear Mr. Giglio:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 3, 2018 sanitary survey inspection of the public water supply system for COUNTRY PLACE SUBD WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### **Significant Deficiencies**

**No observations were recorded in this category.**

## **Deficiencies**

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

## **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

## **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
Evangeline Oaks Water System  
PWS ID LA1015009  
Bossier Parish

Dear Mr. Laborde:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 26, 2018 sanitary survey inspection For Evangeline Oaks Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

Name	Organization
Zahira Tieso	LDH\OPH District IV Engineering
Larry Laborde	Continental Drilling Co.

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The water system does not have a certified operator. The water system is required to have an operator with Class I certification in Water Production and Water Distribution. The water system is required to have an operator with Class 1 certification in Water Production and Water Distribution. This deficiency has been cited since the sanitary survey conducted on 6/25/2012.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	There is no power generator available. Dedicated standby power must be available to ensure continuous treatment and service when the primary power has been interrupted, a standby power supply shall be provided through connection to at least two independent public power sources, or portable or in-place auxiliary power

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system currently is not monitoring the chlorine residuals at the POE-001 (270 Evangeline Dr.) and POE-002 (340 Evangeline Dr.) and the MRT-009 (373 Evangeline Dr.) at least once a day and at the ACR-005 (359 Evangeline Dr.) at least once a month. The system does not have records of monitoring the disinfectant residual throughout the distribution system. Chlorine residuals must be checked daily at each POE and at the MRT, and at least once a month at the ACR site. Disinfectant residuals must be recorded on the forms approved by the state health officer and must be retained as prescribed in the National Primary Drinking Water Regulations.
FACILITY	CATEGORY	FINDINGS
DS0950 -	Distribution	The POEs, TCRs, and the MRT sites are flush valves.

DISTRIBUTION SYSTEM	System	There was no smooth nozzle taps at any of the sites. Sample taps must be smooth-nosed type without interior or exterior threads and must be installed at the following locations: <ul style="list-style-type: none"> <li>▪ POE-001: 270 Evangeline Dr.</li> <li>▪ POE-002: 340 Evangeline Dr.</li> <li>▪ TCR-006: 219 Dogwood Dr.</li> <li>▪ MRT-009: 373 Evangeline Dr.</li> <li>▪ TCR-011: 201 Dogwood Dr.</li> <li>▪ TCR-012: 357 Evangeline Dr.</li> <li>▪ TCR-013: 251 Evangeline Dr.</li> </ul>
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC TANK #1, SOUTH WELL	Finished Water Storage	The hydropneumatic tank at well # 1 south site is located inside a narrow building that is also being used as chemical storage (bleach bottles) room, which makes difficult the access to the facility. General cleanup of the building and relocation of chemicals to allow access to the facility.
FACILITY	CATEGORY	FINDINGS
HD002 - HYDROPNEUMATIC TANK #2, NORTH WELLS	Finished Water Storage	The hydropneumatic tank at well #2 north site shows signs of corrosion on the discharge piping. The tank and the piping must be cleaned and deteriorated parts must be replaced as needed.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC TANK #1, SOUTH WELL	Finished Water Storage	The hydropneumatic tank located at the well #1 south site shows sign of corrosion on the discharge piping. The tank and the piping must be cleaned and deteriorated parts must be replaced as needed.
FACILITY	CATEGORY	FINDINGS
1015009-001 - WELL #1, SOUTH	Source	The well # 1 south does not have a pressure gage installed. A pressure gage must be installed.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The chain link fencing of well #1 south and well #2 northeast have significant corrosion. It is recommended to replace the fencing at both facilities.

In addition, LDH recommends that Evangeline Oaks Water System create and implement a flushing program to improve and maintain the disinfectant residuals throughout the distribution system.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Mr. Adrian Lee  
St Mary's Water System  
P.O. Box 249  
Plain Dealing, LA 71064

Re: Class I Sanitary Survey  
St Mary's Water System  
PWS ID LA1015023  
Bossier Parish

Dear Mr. Lee:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 31, 2018 sanitary survey for St Mary's Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Zahira Tieso	LDH/OPH District IV Engineering
Steve Smith	St. Mary's Water System

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

No unresolved observations were recorded in this category.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The POE-003 (765 Hwy 2 in Plain Dealing, LA) is located off the ground storage tank. The POE must be installed after all treatment (chemical addition) and storage facilities, prior to the distribution system and the first customer. A Lead-free smooth nozzle type tap must be provided at each POE to the distribution system.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The fan of the chlorine building at the main plant was not working. The ventilating fan must be replaced to ensure that one complete air change per minute is accomplished when the room is occupied.
FACILITY	CATEGORY	FINDINGS
1015023-002 - WELL #2	Source	The well #2 does not have a flow meter installed. The discharge piping must be equipped with a means of measuring flow.
FACILITY	CATEGORY	FINDINGS
1015023-002 - WELL #2	Source	The well #2 located off Hwy 537 is showing signs of rust, corrosion, and flaky painting on the casing and discharge piping. The well casing and discharge piping must be cleaned, treated, and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
1015023-003 - WELL #3	Source	The well #3 does not have a flow meter installed. The discharge piping must be equipped with a means of measuring flow.

FACILITY	CATEGORY	FINDINGS
1015023-003 - WELL #3	Source	The well #3 located at the main plant is showing signs of rust, corrosion, and flaky painting on the casing and discharge piping. The well casing and discharge piping must be cleaned, treated, and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

The Ground Water Storage Tank and the Hydropneumatic Tank located at 765 Hwy 2 in Plain Dealing, LA should be inspected and cleaned.

The water system should implement a storage tank maintenance program that includes inspection, cleaning, repairs, and, if needed, painting of storage tanks on a 3-5 year cycle.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Dear Mr. Ganey:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 7, 2018 sanitary survey inspection for Southgate MHP Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## Parties Present

Name	Organization
Zahira Tieso	LDH-OPH District IV Engineering
Karl Schwenke	Southgate MHP
Gregg Stout	LDH-OPH District IV Engineering

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The system does not have a certified operator. The water system shall have an operator with Class 1 certification in water production and distribution. This deficiency was cited on 06/09/2015 sanitary survey.
FACILITY	CATEGORY	FINDINGS
Management	Other	There was a white substance (insecticide for ants) all over the well casing and the concrete slab of well #1. The well casing, concrete slab, and surroundings must be cleaned to prevent foreign substances get into the well.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1015024-002 - WELL #2 LOT 46	Source	Well #2 located at Lot 46 is not properly plugged and abandoned. There is a hole on the casing which is a direct path for contamination of the aquifer. The water well shall be plugged in accordance with the Louisiana Water Well Rules, Regulations, and Standards.
FACILITY	CATEGORY	FINDINGS
1015024-003 - WELL #3 LOT 46 WEST	Source	Well #3 has a gap between the wiring and the casing and a hole on the concrete slab. The well casing must be sealed and the concrete slab must be repaired to prevent the introduction of contamination in the well.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The Monthly Chlorine Reports are not being done correctly. The Monthly Chlorine Reports showed that the disinfectant residual for the

		POE-001 at the Plant and the MRT-002 at Lot #1 are not being recorded daily. The water system must check the chlorine residuals at the POE-001 and the MRT-002 at least once a day. Chlorine residual data must be recorded on the forms approved by the state health officer.
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT SOUTHGATE DR	Treatment	The hypochlorite tank did not have proper labeling. Chemicals must meet the appropriate ANSI/AWWA standards and/or ANSI/NSF Standard 60 and be labeled accordingly.
FACILITY	CATEGORY	FINDINGS
1015024-001 - WELL #1 LOT 38	Source	The pressure gage of well #1 was not working and no flow meter was installed. The pressure gage must be replaced and a flow meter must be installed.
FACILITY	CATEGORY	FINDINGS
1015024-003 - WELL #3 LOT 46 WEST	Source	The well #3 shut off valve located on the discharge piping was leaking. The shut off valve must be replaced.
FACILITY	CATEGORY	FINDINGS
1015024-003 - WELL #3 LOT 46 WEST	Source	Well #3 does not have a pressure gage or flow meter installed. A pressure gage and a flow meter must be installed.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The system does not have a generator available for backup power supply. It is recommended that the system acquire a generator to ensure continuous service is provided when the primary power has been interrupted.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

**III. Assessment Questions**

**A. Source – Well**

*\*If PWS does not use a well source check here and skip to subsection B ☐*

<b>Which well sources were not used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Was a new source activated?		X		
2. Is the ground graded to prevent surface water flow towards the well?	X			
3. Does the well casing extend at least 18" above the ground?	X			
4. Is the exposed portion of the well casing in good condition?		X		
5. Does the well have a secured sanitary seal well cap?	X			
6. Is the sanitary seal well cap vented and screened?	X			
7. Is there a down turned well vent that is at least 24 inches above the ground surface?	X			
8. Are appropriate backflow prevention devices installed, maintained and tested on all cross connections?	X			
9. Does raw water quality data indicate changes to the source water quality?				X
10. Has source yield changed?				X
11. Are there obvious sources of contamination in the vicinity of the well?		X		
12. Was the well pump recently repaired or replaced?		X		
13. Are there signs of vandalism at the well?		X		
14. Have there been any unusual weather events that may have impacted the well?		X		
15. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the well?		X		

**Assessor Name: DANNY MORTIMER**

**B. Source – Surface Water**

*\*If PWS does not use a surface water source check here and skip to subsection C X*

<b>Which surface water sources were used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Is the surface water intake screened and maintained?				
2. Is the pump house protected from unauthorized personnel?				
3. Does raw water quality data indicate changes to the source water quality?				
4. Are there obvious sources of contamination within the nearby watershed?				
5. Are there signs of vandalism at the surface water intake?				
6. Have severe weather events such as heavy rainfall, rapid snowmelt, drought, or reservoir turnover occurred?				
7. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the source?

**C. Treatment Processes**

Questions:	YES	NO	N/A	Unk.
1. Have there been interruptions in any treatment processes?	X			
2. Has the treatment plant(s) or finished water pump(s) experienced any power interruptions?		X		
3. Has there been any recent installation or repair of treatment equipment?	X			
4. Have there been changes to any treatment processes?		X		
5. Does water quality data indicate inadequate/inappropriate treatment of water?				X
6. Are all treatment processes operational and maintained?		X		
7. Is there an air gap between treatment instrumentation and waste lines?			X	
8. Were there any failures to meet required CT values?		X		
9. Did treatment plant flow rates exceed the permitted capacity?		X		
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?				X
11. Did a review of the turbidity data reveal any anomalies?			X	
12. Did a review of chlorine residual data reveal any anomalies or deficiencies?	X			

**Assessor Name: DANNY MORTIMER**

**D. Distribution System**

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?		X		
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?			X	
3. If samples were collected from inside a building, does the site have additional water treatment installed?			X	
4. Is there evidence that the system experienced low or negative pressure?		X		
5. Was there any scheduled flushing of the distribution system?		X		
6. Are pump stations protected from unauthorized personnel?	X			
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?	X			
8. Are air relief valves maintained and operational without leaks?	X			
9. Are pump stations maintained and equipment operational?			X	
10. Are fire hydrants and blow offs maintained and operational without leaks?	X			
11. Does water quality data collected in the distribution system show results indicative of an issue?				X
12. Have any water related customer complaints been received?		X		
13. Is there any evidence of intentional contamination in the distribution system?		X

## Department of Health

Office of Public Health

CERTIFIED MAIL: 7016 3560 0000 0461 9985

March 26, 2018

Mrs. Betty Aucoin  
Peaceful Pines MHP Water System  
7200 Greywood Drive  
Shreveport, LA 71107

Re: Class I Sanitary Survey  
Peaceful Pines MHP Water System  
PWS ID LA1015036  
Bossier Parish

Dear Mrs. Aucoin:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 7, 2018 sanitary survey inspection of the public water supply system for Peaceful Pines MHP Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Zahira Tieso	LDH-OPH District IV Engineering
Betty Aucoin	Peaceful Pines MHP Water System
Gregg Stout	LDH-OPH District IV Engineering

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
1015036-002 - WELL #2	Source	The generator that is located inside the well #2 housing does not have a containment to localize any spilled fuel in the area. A containment must be provided around the generator to protect the water source from possible contamination.

### **Deficiencies**

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

## Department of Health

### Office of Public Health

CERTIFIED MAIL: 7018 1830 0001 0572 2591

October 1, 2018

Mr. Bruce Logan  
Highland Water Works  
952 Ferndale Boulevard  
Haughton, LA 71037

Re: Class I Sanitary Survey  
Highland Water Works  
PWS ID LA1015047  
Bossier Parish

Dear Mr. Logan:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the September 24, 2018 sanitary survey inspection of the public water supply system for HIGHLAND WATER WORKS (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

Name	Organization
Zahira Tieso	LDH-OPH District IV Engineering
Amy Barnett	Highland Water Works
Bruce Logan	Red Chute Utilities Co.

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations****No unresolved observations were recorded in this category.****Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
GS001 - GST #1	Finished Water Storage	Soil was eroded around the overflow pipe and section of the base of the Ground Storage Tank located at the Main Plant. The ground must be returned to a uniform slope and the base of the tank must be refilled to maintain the integrity of the tank.
FACILITY	CATEGORY	FINDINGS
GS001 - GST #1	Finished Water Storage	The Ground Storage Tank overflow pipe is located at the top of the tank and does not extend close to the ground surface. All water storage structures must be provided with an overflow, which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.
FACILITY	CATEGORY	FINDINGS
1015047-001 - WELL #1, MAIN PLANT	Source	The pressure gage of Well #1 was not working. The pressure gage must be replaced.
FACILITY	CATEGORY	FINDINGS
1015047-003 - WATER WELL #3	Source	The well #3 does not have a flow meter installed. The discharge piping must be equipped with a means of measuring flow.
FACILITY	CATEGORY	FINDINGS
1015047-002 - WELL #2, REMOTE WELL	Source	Well #2 show signs of corrosion on the discharge piping. The discharge piping must be cleaned and painted.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to

**correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

The Hydropneumatic Tank located off Tall Pines Rd. in Haughton LA should be inspected and cleaned. There is some tree branches extending to the proximity of the tank that needs to be removed.

The water system should implement a storage tank maintenance program that includes inspection, cleaning, repairs, and, if needed, painting of storage tanks on a 3-5 year cycle.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII  
Attn: Zahira Tieso, P.E.  
1525 Fairfield Ave. Room 569  
Shreveport, Louisiana 71101

The following compliance history is provided for your information

Rev. 3/2017

**III. Assessment Questions**

**A. Source – Well**

*\*If PWS does not use a well source check here and skip to subsection B ☐*

<b>Which well sources were not used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Was a new source activated?		XX		
2. Is the ground graded to prevent surface water flow towards the well?	X			
3. Does the well casing extend at least 18" above the ground?	X			
4. Is the exposed portion of the well casing in good condition?	X			
5. Does the well have a secured sanitary seal well cap?	X			
6. Is the sanitary seal well cap vented and screened?	X			
7. Is there a down turned well vent that is at least 24 inches above the ground surface?	X			
8. Are appropriate backflow prevention devices installed, maintained and tested on all cross connections?	X			
9. Does raw water quality data indicate changes to the source water quality?		X		
10. Has source yield changed?		X		
11. Are there obvious sources of contamination in the vicinity of the well?		X		
12. Was the well pump recently repaired or replaced?		X		
13. Are there signs of vandalism at the well?		X		
14. Have there been any unusual weather events that may have impacted the well?		X		
15. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the well?		X		

**Assessor Name:**

**B. Source – Surface Water**

*\*If PWS does not use a surface water source check here and skip to subsection C ☒*

<b>Which surface water sources were used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Is the surface water intake screened and maintained?				
2. Is the pump house protected from unauthorized personnel?				
3. Does raw water quality data indicate changes to the source water quality?				
4. Are there obvious sources of contamination within the nearby watershed?				
5. Are there signs of vandalism at the surface water intake?				
6. Have severe weather events such as heavy rainfall, rapid snowmelt, drought, or reservoir turnover occurred?				
7. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the source?				

**Assessor Name: GREGG STOUT, R.S.**

**RTCR Level 2 Assessment Form**

Rev. 3/2017

**C. Treatment Processes**

Questions:	YES	NO	N/A	Unk.
1. Have there been interruptions in any treatment processes?	X			
2. Has the treatment plant(s) or finished water pump(s) experienced any power interruptions?		X		
3. Has there been any recent installation or repair of treatment equipment?	X			
4. Have there been changes to any treatment processes?		X		
5. Does water quality data indicate inadequate/inappropriate treatment of water?	X			
6. Are all treatment processes operational and maintained?		X		
7. Is there an air gap between treatment instrumentation and waste lines?				
8. Were there any failures to meet required CT values?	X			
9. Did treatment plant flow rates exceed the permitted capacity?		X		
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?		X		
11. Did a review of the turbidity data reveal any anomalies?			X	
12. Did a review of chlorine residual data reveal any anomalies or deficiencies?		X		
13.				

Assessor Name: \_\_\_\_\_

**D. Distribution System**

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?		X		
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?			X	
3. If samples were collected from inside a building, does the site have additional water treatment installed?			X	
4. Is there evidence that the system experienced low or negative pressure?		X		
5. Was there any scheduled flushing of the distribution system?		X		
6. Are pump stations protected from unauthorized personnel?	X			
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?	X			
8. Are air relief valves maintained and operational without leaks?			X	
9. Are pump stations maintained and equipment operational?	X			
10. Are fire hydrants and blow offs maintained and operational without leaks?			X	
11. Does water quality data collected in the distribution system show results indicative of an issue?	X			
12. Have any water related customer complaints been received?		X		
13. Is there any evidence of intentional contamination in the distribution system?		X

Re: Class I Sanitary Survey  
Bella Vista MHP Water System  
PWS ID LA1017005  
Caddo Parish

Dear Mr. Clark:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 18, 2018 sanitary survey inspection of the public water supply system for Bella Vista MHP Water System (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

**Name**

James Soileau  
Gary Clark  
Randy Moulton

**Organization**

LDH-OPH Region 7 Engineering Services  
Bella Vista MHP Water System  
Contract Operator

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system did not have a formal cross connection control program in place. The water system shall construct a personalized cross connection control program to protect the water supply. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
HD004 - HD TANK #4	Finished Water Storage	There was no pressure gauge on the hydropneumatic tank. A pressure gauge should be added. Adequate controls shall be provided to maintain levels in distribution system storage structures. Level indicating devices should be provided at a central location.
FACILITY	CATEGORY	FINDINGS
1017005-004 - WELL #4 @ MHP REAR	Source	There was a hole in the electrical box and there was no screen on the air vent on well #4. These could create a pathway for contamination into the well. The hole shall be sealed and a 24-mesh non corrodible screen shall be added to the air vent. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
HD001 - HD TANK #1	Finished Water Storage	There was no pressure gauge on the hydropneumatic tank. a pressure gauge should be added. Adequate controls shall be provided to maintain levels in distribution system storage structures. Level indicating devices should be provided at a central location.
FACILITY	CATEGORY	FINDINGS
HD006 - HD TANK #6	Finished Water Storage	There was no pressure gauge on the hydropneumatic tank. A pressure gauge should be added. Adequate controls shall be provided to maintain levels in distribution system storage structures. Level indicating devices should be provided at a central location.
FACILITY	CATEGORY	FINDINGS
HD003 - HD TANK #3	Finished Water Storage	There was no pressure gauge on the hydropneumatic tank. A pressure gauge should be added. Adequate controls shall be provided to maintain levels in distribution system storage structures. Level indicating devices should be provided at a central location.
FACILITY	CATEGORY	FINDINGS
HD005 - HD TANK #5	Finished Water Storage	There was no pressure gauge on the hydropneumatic tank. A pressure gauge should be added. Adequate controls shall be provided to maintain levels in distribution system storage structures. Level

		indicating devices should be provided at a central location.
FACILITY	CATEGORY	FINDINGS
HD007 - HD TANK #7	Finished Water Storage	There was no pressure gauge on the hydropneumatic tank. A pressure gauge should be added. Adequate controls shall be provided to maintain levels in distribution system storage structures. Level indicating devices should be provided at a central location.
FACILITY	CATEGORY	FINDINGS
1017005-001 - WELL #1 @ MHP ENTRANCE	Source	There was no flow meter on Well #1. A flow meter should be added. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
Eagle Water System Public Water System  
PWS ID LA1017012  
Caddo Parish

Dear Ms. Knight:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 22, 2018 sanitary survey inspection of the public water supply system for Eagle Water System (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

**Name**

James Soileau  
Joshua Anderson

**Organization**

LDH-OPH Region 7  
Eagle Water

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	During the survey, it was noted that the chlorine injector piping was run through the overflow piping and into the tank. The injection piping shall be removed from the overflow and injected at a different point. The overflow shall be brought back to working order, and a splash pad and 24-mesh screen shall be installed.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
TP003 - TP @ GRAHAM LANE	Treatment	Storage tanks and pipelines for liquid chemicals shall be specified for use with individual chemicals and not used for different chemicals. Offloading areas must be clearly labeled to prevent accidental cross-contamination. There was no label on the sodium hypochlorite tank in use.
FACILITY	CATEGORY	FINDINGS
1017012-003 - WELL #3	Source	The electrical wiring was not enclosed in a proper electrical conduit, and the well casing was not sealed properly. Both could provide a pathway for contamination into the well casing. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1017012-005 - WELL #5	Source	The electrical wiring was not enclosed in a proper electrical conduit, which can provide a pathway for contamination into the well casing. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1017012-001 - WELL #1	Source	The well casing was not properly sealed, which can function as a pathway for contamination into the well casing and discharge piping. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the

		well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
--	--	---

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
HD002 - HD TANK #2, GRAHAM LANE	Finished Water Storage	All cisterns and storage tanks shall be of watertight construction and made of concrete, steel or other materials approved for this purpose by the state health officer. The pressure tank was not properly secured to the slab, and should be bolted down in the holes that are available to ensure stability of the tank.
FACILITY	CATEGORY	FINDINGS
GR001 - GST #1, MCELROY	Finished Water Storage	The overflow piping was located at the top of the ground storage tank. All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.
FACILITY	CATEGORY	FINDINGS
GR003 - GST #3, EAGLES NEST	Finished Water Storage	The overflow piping was located at the top of the ground storage tank. All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.
FACILITY	CATEGORY	FINDINGS
TP003 - TP @ GRAHAM LANE	Treatment	Chemicals shall be stored in covered or unopened shipping containers, unless the chemical is transferred into an approved storage unit. The sodium hypochlorite tank had a big hole in the top of the cover. This could allow for small animals to climb inside. The hole should be sealed, or an appropriate cover/lid should be used.
FACILITY	CATEGORY	FINDINGS
TP003 - TP @ GRAHAM LANE	Treatment	There were sodium hypochlorite tanks being stored outside. Storage containers of tanks shall be sited out of the sunlight in a cool area and shall be vented to the outside of the building.
FACILITY	CATEGORY	FINDINGS
1017012-005 - WELL #5	Source	There was no flow meter on the discharge piping. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained
FACILITY	CATEGORY	FINDINGS
1017012-003 - WELL #3	Source	The pressure gauge was not in working order at the date of the inspection. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.

FACILITY	CATEGORY	FINDINGS
1017012-006 - WELL #6	Source	There was no flow meter on the discharge piping. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations:**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP003 - TP @ GRAHAM LANE	Treatment	There were empty storage containers throughout the treatment site. Provisions shall be made for disposing of empty bags, drums or barrels by an approved procedure which will minimize exposure to dusts.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII  
 Attn: James Soileau,  
 1525 Fairfield Ave. Room 569  
 Shreveport, Louisiana 71101

The following compliance history is provided for your information.

Mayor Frank Stawasz  
Town of Greenwood Water System  
9381 Greenwood Rd  
Greenwood, LA 71033

Re: Class 2 Follow-Up Sanitary Survey Site Visit  
Town Of Greenwood Water System  
PWS ID LA1017014  
CADD0 Parish

Dear Mayor Stawasz:

The Department of Health and Hospitals would like to thank you and the site visit participants for the courtesy and assistance provided during the November 8, 2018 Follow-Up Sanitary Survey inspection of the Town of Greenwood Water System. These inspections are part of our program to ensure compliance with the EPA Code of Federal Regulations Title 40 Parts 141-142 and Title 51 of the Louisiana Administrative Code.

This letter provides a summary of items noted in previous sanitary surveys in addition to during this follow-up sanitary survey. If significant deficiencies have been listed on the subsequent pages you are required to correct the deficiencies and provide written documentation of your corrective actions including the date(s) resolved. You may also request additional time beyond the 60 days in writing by providing a detailed plan of corrective action that includes proposed completion dates. Failure to respond to this letter in writing within 60 days of receipt may result in Enforcement Action.

#### Parties Present

**NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS**

Based upon review of the available records and visual examination of the facilities, the following deficiencies require your immediate attention.

**Unresolved Observations – Deficiencies cited during previous site visits**

No unresolved observations were recorded in this category.

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.

**Minor Deficiencies**

No observations were recorded in this category.

**The deficiencies listed in the above table titled “NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS” must be corrected and a written response submitted to the department within 60 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the DHH-OPH Enforcement Units. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided by the Public Water System to the Surveying Office within 60 days of receipt of this letter with details regarding your corrective actions and any time extensions you may propose or you will be cited with a Treatment Technique violation which requires you to notify your consumers of the violation incurred.**

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

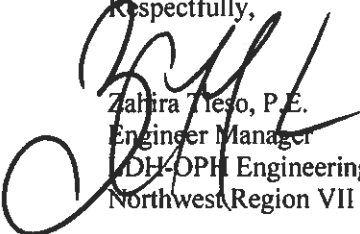

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
01/03/2014	04/08/2014	Formal Enforcement	Significant	Treatment	TP001-SURFACE WATER PLANT
<b>Comments:</b> The water system must have duplicate backwash pumps.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
01/03/2014	04/08/2014	Formal Enforcement	Significant	Treatment	TP001-SURFACE WATER PLANT
<b>Comments:</b> As part of the engineer's review and plans for compliance, the flow control system must be evaluated.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
01/03/2014	04/08/2014	Formal Enforcement	Significant	Treatment	TP001-SURFACE WATER PLANT
<b>Comments:</b> The water system's backwash system appears to be under sized. The water system must hire an engineer to evaluate the backwash process to determine the appropriate size of the backwash pumps and to determine if additional backwash capacity is needed. The report must be submitted to this office for review. Upon approval, the water system must implement the engineer's report.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was discovered that settled water turbidity is not monitored or recorded. Monthly Operating Reports incorrectly reflect finished water turbidity values post filtration as values for settled water turbidity. Each supplier using surface water as its source of water supply should monitor and record settled water turbidity prior to filtration in each individual treatment train at least once every four hours.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	It was discovered during the sanitary survey that the system is progressing with plans to install a carbon slurry injection by October 13, 2018. It was stated that tank and materials have been ordered for this change in treatment. Applicable plans, specifications and information must be submitted to the Region 7 office in order to obtain a permit from the State Health Officer prior to any construction.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	A cross connection control plan was provided. However, it is unknown if the system has implemented ordinances, rules, contracts, policies, or other steps to achieve CCCP compliance. Water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.

		Documentation must be provided to demonstrate that the system has implemented and is actively enforcing the CCCP.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED STORAGE TANK	Finished Water Storage	The overflow pipe at the Elevated Tank discharges directly into and terminates at the flow line of an existing drainage ditch with standing water. The overflow should be terminated at an elevation between 12 and 24 inches above the ground storage and discharge over a drainage inlet structure or splash plate.
FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER PLANT	Treatment	Bulk storage containers of Alum and Sodium Chloride were not labeled in the bulk chemical storage building. Chemical storage containers must be clearly labeled.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Data on the Monthly Operating Reports for turbidity monitoring is incorrect. After discussing during the sanitary survey, it is recommended that all treatment staff acquire training on filter monitoring and reporting.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	During the survey, records of calibrations/validations were not available for review of turbidimeters. C/V records shall be kept on file and retained for not less than three (3) years. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was discovered during the sanitary survey that Operation Evaluation Level Reports in relation to the Disinfectants and Disinfection Byproduct Rule are not being submitted as required by Administrative Order. System should seek and maintain compliance with current Administrative Order.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system does not have an approved Nitrification Control Plan (NCP) on file. All systems using continuous chloramination for disinfection were required to submit an NCP for approval by the state officer before January 1ST of 2017. The new NCP must meet the minimum monitoring criteria and industry standards as specified in the Disinfection Rule (LAC 51:XII.367.G-H). The NCP submitted on 9/13/2018 is not dated and does not reference the Town of Oil City. Please submit a current NCP for approval.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Upon inspection, it was discovered that turbidity Monthly Operating Reports were missing for the following months: June 2017 and November 2017. Systems shall maintain the results of turbidity monitoring for at least three years.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to

correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Dear Mr. Lockard:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 14, 2018 sanitary survey inspection of the public water supply system for Rodessa Water System (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
James Soileau	LDH-OPH Region 7
Little-John Cecil	Rodessa Water System

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### **Significant Deficiencies**

**No observations were recorded in this category.**

### Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT YARD	Treatment	There was no fan in the chlorine building. Where chlorine gas is used, the room shall be constructed to provide the following: each room shall have a ventilating fan with capacity which provides one complete air change per minute when the room is occupied.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	General site cleanup is recommended at well #3. There is an excess of unused parts on the ground at the well site. The area surrounding the well should be cleaned up.
FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT YARD	Treatment	Adequate housing must be provided for the chlorination equipment and for storing the chlorine. A light should be added in the chlorination building.

### Written Response Required

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII  
Attn: James Soileau, EI  
1525 Fairfield Ave. Room 569  
Shreveport, Louisiana 71101

The following compliance history is provided for your information:

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at (318) 676-5422, or at James.Soileau2@la.gov.

Respectfully,

A handwritten signature in black ink, reading "James Soileau". The signature is fluid and cursive, with the last name "Soileau" being more prominent.

Dear Mayor Perkins:

The Department of Health and Hospitals would like to thank you and the site visit participants for the courtesy and assistance provided during the December 28, 2018 Follow-Up Sanitary Survey inspection of the public water supply SHREVEPORT WATER SYSTEM. These inspections are part of our program to ensure compliance with the EPA Code of Federal Regulations Title 40 Parts 141-142 and Title 51 of the Louisiana Administrative Code.

This letter provides a summary of items noted in previous sanitary surveys in addition to during this follow-up sanitary survey. If significant deficiencies have been listed on the subsequent pages you are required to correct the deficiencies and provide written documentation of your corrective actions including the date(s) resolved. You may also request additional time beyond the 60 days in writing by providing a detailed plan of corrective action that includes proposed completion dates. Failure to respond to this letter in writing within 60 days of receipt may result in Enforcement Action.

**Organization**

LDH-OPH Region 7 Engineering Services  
Evergreen Estates Water System

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system does not have a formal cross connection control program in place. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1017051-002 - WELL #2	Source	The well casing had a small hole on the vertical shaft that could provide a pathway for contamination. The vent was removed and a rubber tube was inserted into the well casing in its place. The tube shall be removed and the vent shall be reinstalled. The vent shall also be equipped with 24-mesh screening to prevent the entrance of contaminants into the well casing. The hole on the vertical shaft shall be sealed. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1017051-001 - WELL #1	Source	The well casing seal had some holes in it that could create a potential pathway for contamination. The casing shall be resealed to prevent the entrance of any harmful contaminants. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	General site cleanup for the main plant area and the pump house is recommended. There was also a moderate amount of vegetation inside the fencing of well #2. The vegetation should be cut back and kept to a minimum.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water system did not have an auxiliary power source available. Dedicated Standby power shall be required by the reviewing authority so that water may be treated and/or pumped to the distribution system during outages to meet the average day demand. To ensure continuous service when the primary power has been interrupted, a standby power supply shall be provided through connection to at least two independent public power sources, or portable or in-place auxiliary power.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1017063-001 - WELL #1	Source	The electrical wiring was not enclosed in a proper electrical conduit, which can provide a pathway for contamination into the well casing. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1017063-002 - WELL #2	Source	The electrical wiring was not enclosed in a proper electrical conduit, which can provide a pathway for contamination into the well casing. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	The overflow piping was at the top of the ground storage tank and did not have a splash pad. All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.
FACILITY	CATEGORY	FINDINGS
1017063-001 - WELL #1	Source	The discharge piping shall where applicable, be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen. The mesh corrosion screen on the air release valve was not 24 mesh.

FACILITY	CATEGORY	FINDINGS
1017063-002 - WELL #2	Source	The discharge piping shall where applicable, be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen. The mesh corrosion screen on the air release valve was not 24 mesh.
FACILITY	CATEGORY	FINDINGS
1017063-001 - WELL #1	Source	There was no flowmeter on the discharge piping. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.
FACILITY	CATEGORY	FINDINGS
1017063-002 - WELL #2	Source	There was no flowmeter on the discharge piping. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	<p>During the course of the survey, a second well was noted for the water system. The well does not appear in the inventory for Big Oaks Water System. However, the well drillers log indicates it is a community water supply well. LDH records indicate the well has not been sampled for bacteriological quality or National Primary and Secondary Drinking Water Regulations. The well must be sampled in accordance with State and Federal Regulations as noted in the guidance attached. As-built drawings of the well, its appurtenances, treatment injection locations (chlorine), and tie in to the system must be submitted by a professional engineer, or any documentation confirming a permit issued by LDH in the past will be accepted in lieu of the aforementioned items. The well must not be utilized as part of the public water system until all sampling requirements are met.</p> <p>In addition, these deficiencies we noted at the back up well and should be corrected:</p> <p><b>Significant Deficiencies:</b></p> <ol style="list-style-type: none"> <li>1) The electrical wiring was not enclosed in a proper electrical conduit, which can provide a pathway for contamination into the well casing. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.</li> </ol> <p><b>Deficiencies:</b></p> <ol style="list-style-type: none"> <li>1) There was no flowmeter on the discharge piping. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.</li> <li>2) The discharge piping shall where applicable, be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen. The mesh corrosion screen on the air release valve was not 24 mesh.</li> </ol>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	<p>No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers</p>

		shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
--	--	--

### Deficiencies

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	The overflow piping was located at the top of the ground storage tank. All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### Written Response Required

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Lake Shreve Estates Water System Public Water System  
PWS ID LA1017083  
Caddo Parish

Dear Mr. Wilson:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the February 19, 2018 sanitary survey inspection of the public water supply system for Lake Shreve Estates Water System (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

LDH-OPH Region 7  
Lake Shreve Water System

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

"An Equal Opportunity Employer"

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
HD001 - PRESSURE TANK	Finished Water Storage	Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. The overflow piping on the storage tank was not screened and did not have a flapper cover. The overflow shall be covered with a 24 mesh screen, or a flapper valve.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
1017083-001 - WELL #1	Source	The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained. The pressure gauge was in extremely poor condition, and should be replaced.
FACILITY	CATEGORY	FINDINGS
1017083-001 - WELL #1	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. The well casing was moderately corroded, and should be repainted before it becomes a major pathway for contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Written Response Required**

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The air relief valve piping discharges into a drainage conduit without the benefit of an approved air gap. There must be an approved air gap of at least two inches between the air relief valve piping and the drainage conduit.
FACILITY	CATEGORY	FINDINGS
UN001 - UNDERGROUND STORAGE TANK	Finished Water Storage	The clearwell appears to have several void spaces that could allow for the entrance of birds, insects, dust or other contaminating material. The chlorine injection line creates a void space in the clearwell's wall. The chlorine injection line needs to be properly secured, so no void spaces exist in the area of the pipe. Inspect the exterior of the clearwell and secure all openings to avoid possible contamination. Materials used to eliminate the voids must be NSF approved for use with potable water.
FACILITY	CATEGORY	FINDINGS
1019008-004 - WELL #15 - EAST HARRISON/HWY 27 S	Source	The well is equipped with a smooth nosed sampling tap. The tap is painted and serves in conjunction with a hose bib, a potential point of water usage. The hose bib presents a point of interference with the quality of sample taken at the well source. Eliminate the potential point of water usage and install a smooth nosed sampling tap to facilitate the collection of water samples only.
FACILITY	CATEGORY	FINDINGS
1019008-003 - WELL #14 - COWARD/FRONT ST	Source	The well is equipped with a smooth nosed sampling tap. The tap is painted and serves in conjunction with a hose bib, a potential point of water usage. The hose bib represents a point of interference with the quality of samples taken at the well source. Eliminate the potential point of water usage and install a smooth nosed sampling tap to facilitate the collection of water samples only.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The elevated tower is equipped with a smooth nosed sampling tap. The tap serves in conjunction with a hose bib, a potential point of water usage. The hose bib presents a point of interference with the quality of sample taken at the elevated tower. Eliminate the potential point of water usage and install a smooth nosed sampling tap to facilitate the collection of water samples only.

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The water system is intending to paint the exterior and inspect the interior of the elevated storage tank in 2019. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
TP003 - PRETREAT FOR WELL #15	Treatment	There is no secondary containment provided for the chemical being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment for the phosphate storage tank with a sufficient containment volume.
FACILITY	CATEGORY	FINDINGS
TP002 - PRETREAT FOR WELL #14	Treatment	There is no secondary containment provided for the chemical being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system, or equipment failure. Provide a secondary means of containment for the phosphate storage tank with a sufficient containment volume.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
TOWN of IOWA WATER SYSTEM Public Water System  
PWS ID LA1019026  
CALCASIEU Parish

Dear Mayor Ponthieux:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the November 19, 2018 sanitary survey inspection of the public water supply system for TOWN of IOWA WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
Brad Bebee	Town Of Iowa
James Hardy	Town Of Iowa

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	During the survey, there was a leak observed in the treatment plant near the filter gallery area along the side wall. Water systems that provide potable water to customers must prevent leakage within system facilities by keeping equipment properly maintained at all times. It is imperative that this leak be repaired immediately with minimum interruption of service to customers.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system has not complied with the requirements of the Cross Connection Control Program. Customers with backflow prevention devices are unaware of the need to test their devices and submit records to the water system. From reviewing existing records, it appears that many customers (except Jeff Davis Bank and Angels Day Care) are not supplying the water system with the required annual test records. The water system has not taken any action against customers who do not test their devices or submit the results to the water system. In order to be in compliance, the water system must develop a list of customer with backflow prevention devices. The list must be made available showing customers and applicable devices to be managed by the Cross Connection Control Program. The water system is encouraged to establish a file for each customer with a device, with supporting results for each year to demonstrate compliance between sanitary survey visits. Also, copies of installation request letters, annual test reminder notice, and all other correspondences to and from each customer should be filed in these respective files. The file for each customer should support the path to compliance. Please provide a list of customers with backflow prevention devices and offer some feedback for customers that were passed due for device annual test requirement.

FACILITY	CATEGORY	FINDINGS
1019026-001 - WELL #3 - KINNEY AVE	Source	The well is not equipped with a sanitary seal. A sanitary seal of the appropriate size must be provided to prevent the entrance of contamination into the well casing and discharge piping.
1019026-002 - WELL #4 - TOWER		
FACILITY	CATEGORY	FINDINGS
1019026-005 - WELL #5 - 1ST STREET	Source	The well's prelube drain line is not effective and not properly piped to drain away from the well's base. Prelube discharge from the well's normal operation are currently draining on the well's base causing staining, wearing of paint, and potential corrosion. Properly pipe the prelube discharge away from the well and its base to prevent any potential source of contamination.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	An additional chlorine residual check must be made monthly at the approved ACR site and recorded on the approved LDH Report #3. The ACR point must be checked at least once monthly and recorded on Report #3. This sampling point was established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 5 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The existing screen for the elevated tower overflow pipe is damaged. The overflow piping must be screened with a four mesh, non-corrodible screen. Replace the damaged screen with a new four mesh, non-corrodible screen to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The level gauge for the elevated storage tank is broken and documented by the water system and added to a maintenance list. The level gauge shall be repaired and brought back to working order, unless the water system implements another way of monitoring the water level in this structure.

FACILITY	CATEGORY	FINDINGS
1019026-002 - WELL #4 - TOWER	Source	The well outer casing piping has been cleaned but not painted to resist corrosion. Paint the well casing to resist corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
1019026-001 - WELL #3 - KINNEY AVE	Source	The well outer casing piping has been cleaned but not painted to resist corrosion. Paint the well casing to resist corrosion and deterioration that could lead to a potential source of contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #3, #4, #5	Treatment	The chlorine gas cylinders are not properly secured. Full and empty cylinders of chlorine gas must be restrained in position at all times to prevent upset. Properly secure all chlorine gas cylinders.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #3, #4, #5	Treatment	The plant piping is not identified and a direction of water flow is not indicated. Piping should be labeled to identify water at the plant in all its states, i.e. raw water, finished water, backwash water, etc. Directional arrows showing flow of water would also be beneficial.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
CALCASIEU WW #14 WARD 5 Public Water System  
PWS ID LA1019042  
CALCASIEU Parish

Dear Mr. Miller:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 7, 2018 sanitary survey inspection of the public water supply system for CALCASIEU WW #14 WARD 5 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Randy Doyle	Calcasieu Wwd #14 Ward #5
Donald Johnson	Calcasieu Wwd #14 Ward #5
Hayden K. Keigley	OPH Region IV Engineering

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been enforcing the CCCP and there were no current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.

### Deficiencies

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Steven R. Joubert, P.E.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

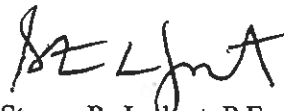

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

Violation Number	Violation Date	Violation Type	Compliance Period
5002016	12/01/2017	CCR REPORT	

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3214.

Respectfully,

Steven R. Joubert, P.E.

Re: Class I Sanitary Survey  
CALCASIEU PARISH WW DISTRICT NO 1 Public Water System  
PWS ID LA1019051  
CALCASIEU Parish

Dear Mr. Hoffpauir:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 5, 2018 sanitary survey inspection of the public water supply system for CALCASIEU PARISH WW DISTRICT NO 1 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
Grant Avery	Calcasieu Waterworks District #1
Gerald Hoffpauir	Calcasieu Waterworks District #1
Kevin Simmons	Calcasieu Waterworks District #1

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

No observations were recorded in this category.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL002 - WATER TOWER B - JOE MILLER RD.	Finished Water Storage	It is unclear if the overflow pipe for Joe Miller Road elevated tower is properly screened. The overflow pipe must be screened with a four mesh non-corrodible screen and installed to provide protection at all times. (It could not be confirmed if a screen was present on the overflow pipe during the survey.)
FACILITY	CATEGORY	FINDINGS
EL003 - WATER TOWER C - GILLIS	Finished Water Storage	The screen for the overflow pipe on EL003 is damaged. The overflow piping must be screened with a four mesh, non-corrodible screen. Replace the damaged screen with a new four mesh, non-corrodible screen to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #3, #6 - PLANT A  TP002 - TP FOR WELL #4, #5, #7 - PLANT B	Treatment	Potassium Permanganate solution tanks do not demonstrate proper protection against backflow events. Chemical solutions tanks shall be properly protected from backflow as required. Provide provisions that solution tanks will be filled by means of an air gap.
FACILITY	CATEGORY	FINDINGS
TP002 - TP FOR WELL #4, #5, #7 - PLANT B	Treatment	The ventilating fan is currently not operational. Either the fan is broken or there is an electrical issue. The chlorine room must be equipped with a working ventilating fan.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #3, #6 - PLANT A  TP002 - TP FOR WELL #4, #5, #7 - PLANT B	Treatment	There is no secondary containment provided for the Fluoride and phosphate chemicals solution tanks being used for water treatment. Secondary containment must be provided for liquid chemical solution tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment for the Fluoride and phosphate solution tanks, with sufficient containment volume.
FACILITY	CATEGORY	FINDINGS
1019051-002 - WELL #3 - PLANT A (SCHOOL)  1019051-007 - WELL #7 - PLANT B (SHOP)	Source	The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.

FACILITY	CATEGORY	FINDINGS
1019051-004 - WELL #5 - PLANT B (CHURCH)	Source	There is currently no pressure gauge installed on the discharge piping of the well. A pressure gauge must be installed on the discharge piping upstream of the check valve as a means to measure the actual operating head conditions. Install a pressure gauge on the well discharge piping to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

During the survey, it was noted that the Filters at Plant A and their associated piping were showing signs of corrossions, rust and flaky paint. Calcasieu Parish WW District #1 should give some thought and make plans and provisions to repair/replace the deteriorating components of these units.

#### Written Response Required

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Solomon Angwafo, E.I.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

Re: Class I Sanitary Survey  
MOSSVILLE WW DISTRICT NO 2 Public Water System  
PWS ID LA1019052  
CALCASIEU Parish

Dear Mr. Frelot:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 15, 2018 sanitary survey inspection of the public water supply system for MOSSVILLE WW DISTRICT NO 2 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
Carie Davis	Calcasieu Parish Police Jury
Malcolm Daigle	Calcasieu Parish Police Jury

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	From reviewing existing records, it appears some customers are not supporting the water system with the required test results for the Cross Connection Control Program. The water system must provide documentation to support what happens after a notice is issued and there is no response from the customer. The file for each customer should support the path to compliance. There are some customer files missing correspondence from the said customers. Others files had only letters from customers of an unspecified device installed without any test records. Please provide some feedback on the cases where reports are lacking from the customers (Ahern Rentals, Capital Valve, Civil Construction, Targa, etc.). Additionally, the current notice to customers to install or confirm the presence or test a device is not very clear and it is hard to understand when reports are finally due. The water system is encouraged to draft separate reminder letters to address customers that have the device installed for their annual test records and another notice for existing customers requiring installation of new devices. Please provide this office with some feedback on the areas mentioned.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Currently, the POE and MRT sites are monitored but results are recorded either on wrong or unapproved forms. Please, also start monitoring the updated ACR site once a month as updated from the MPP plan. LDH Approved Chlorine Residual Forms can be downloaded through the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 5 office a copy of the next three (3) months of properly recorded, chlorine residual forms.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Solomon Angwafo, E.I.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

#### **Bacteriological Sampling History**

##### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

#### **Violation History**

##### **Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

##### **Maximum Contaminant Level (MCL) Violations during the past year**

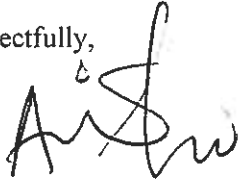

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3232.

Respectfully,

A handwritten signature in black ink, appearing to read 'A. Angwafo', written over the word 'Respectfully,'.

Re: Class I Sanitary Survey  
CALCASIEU PARISH WW DISTRICT NO 4 Public Water System  
PWS ID LA1019053  
CALCASIEU Parish

Dear Mr. Fleming:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the November 13, 2018 sanitary survey inspection of the public water supply system for CALCASIEU PARISH WW DISTRICT NO 4 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
Brian Myers	Calcasieu Parish Waterworks District N <sup>o</sup> 4
Zane Victorian	Calcasieu Parish Waterworks District N <sup>o</sup> 4
Crystal Broussard	Calcasieu Parish Waterworks District N <sup>o</sup> 4

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

Visit Date	Notify Date	Reason	Severity	Category	Facility
07/01/2016	07/07/2016	Sanitary Survey, Finished	Minor	Treatment	TP001-TP FOR WELL #3, #4
<b>Comments:</b> There is no secondary containment provided for the liquid chemical (Potassium Permanganate) being used for water treatment. Secondary containment prevents spillage or accidental drainage of chemicals due to equipment and primary containment failure. The installation of the secondary containment was part of the original permit approval to upgrade the filter system. From this visit, secondary containment does not appear to have been enacted.					

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	Some of the filter units are showing signs of severe corrosion. This units must be cleaned, treated, and painted to prevent further corrosion that could yield to structural failure.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	During the sanitary survey visit, it was noted that changes requiring a written approval from the state health officer were started and/or completed without authorization. Please submit to this office signed, stamped, and dated As-Built plans and specifications from a Louisiana licensed professional engineer for review and approval by LDH on the Ground Storage Tank 1. Initial comments issue on March 5, 2018 were not addressed and formal approval was never issued.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	From reviewing existing records, it appears many customers are not supplying the water system with the required test results for the Cross Connection Control Program. The water system must provide documentation to support what happens after a notice is issued, but there is no response from the customer. A file created for each customer should support the path to compliance. Many customers had not updated the water system with the latest test results of their devices. Please provide some feedback on the cases where test reports are lacking from customers whose devices are past due for routine annual test.
FACILITY	CATEGORY	FINDINGS
1019053-002 - WELL #3 - NORTH	Source	The opening on the drawdown tube for the north water well is missing a lid and proper sealed. The uncapped drawdown tube provides for the possible entrance of foreign substances into the well casing that could lead to bacteriological contamination. Eliminate the entrance of possible bacteriological contamination.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
1019053-002 - WELL #3 - NORTH	Source	The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1019053-002 - WELL #3 - NORTH	Source	The well's pressure gauge is broken. The well's discharge piping must be equipped with a working pressure gauge, installed upstream of the check valve.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### Written Response Required

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

RE: Calcasieu Parish Water Works District No. 4, Ward 4  
- Ground Storage Modifications – Roof Replacement  
Westlake, LA  
Calcasieu Parish

Dear Applicant:

Plans and specifications for the above named project have been reviewed. The plans are pending resolution of the following items which appear to be in conflict with applicable provisions of the Louisiana Administrative Code or upon which further information is desired:

1. Please provide a cost estimate for this project.
2. A detail is needed of the proposed vent. The Engineering Services Permit Application (ESPA) does not confirm that the vent will be 24" above the roof according to the applicable requirements of Recommended Standards of Water Works, 2003 ed. (TSS). See TSS 7.0.9.d. Please provide supporting evidence that the vent will be according to the requirements and properly document this on the ESPA.
3. A detail is needed of the proposed overflow piping. Will this piping be modified during construction? The ESPA confirms that the overflow piping will not be turned down and discharging 12 – 24" above grade over a splash plate or drain inlet. The overflow must be according to TSS 7.0.7.b. Please provide supporting evidence that the overflow will be according to the requirements and properly document this on the ESPA.
4. A detail is needed of the proposed 24" roof hatch. The ESPA does not confirm a 2" overlap with respect to the hatch and frame on the roof structure. The hatch must support the requirements of TSS 7.0.8.2.b with a 2" overlap of a framed opening at least four inches high. Please provide supporting evidence

RE: Calcasieu Parish Water Works District No. 4, Ward 4  
- Ground Storage Modifications – Roof Replacement  
Westlake, LA  
Calcasieu Parish

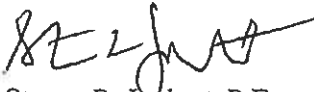

that the hatch will be according to the requirements and properly document this on the ESPA.

5. The sampling provisions must be according to TSS 7.0.18. This section requires two or more successive sets of samples taken at 24-hour intervals. A set must be noted as two samples taken 15 minutes apart. Please review AWWA and TSS and modify the specifications in this submittal covering this provision.
6. All the information in the "General" section on Page 2 of the ESPA must be affirmed. Please note, if the existing condition of any of these items will be changed. Work related to the tank must not involve removing or modifying required appurtenances without LDH approval.

Please make the necessary changes in the plans and specifications and submit the revised design for our consideration.

Should you have any questions please contact this office at 1-337-475-3214.

Sincerely,

Steven R. Joubert, P.E.  
District III Engineer

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	One of the filter units at the Shady Street plant is exhibit severe corrosion. This unit must be cleaned, treated, and painted to prevent further corrosion that could yield to structural failure. Due to the pressures exhibited on the container, a closer inspection may be needed.
FACILITY	CATEGORY	FINDINGS
Management	Other	There is a leak on the control valve downstream of the filter units before the piping exits the wall en route to the ground storage tank at the Shady Street plant location. The leak must be repaired to prevent possible contamination.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There is a hose bib with a hose on the discharge piping of the finished water pumps at the Shady Street Plant location that does not have an atmospheric vacuum breaker installed. Install an atmospheric vacuum breaker on the hose bib. Do not leave a control valve on the end of the hose when not in use. The hose must be removed and stored, when not being used.
FACILITY	CATEGORY	FINDINGS
1019054-007 - WELL #7 - JONES	Source	The area around the well is wet due to excessive discharge from the well. The ponding water presents a potential source of contamination. The discharge from the well needs to be addressed. Properly direct the prelude discharge away from the well and grade the immediate area.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
PF002 - HILMA PLANT PUMPS	Pump/pumping facility and control	The pump at the far end of the pump bank has a leak. All piping and appurtenances for the pump must have watertight joints. Repair the leak to protect against a possible source of contamination.
FACILITY	CATEGORY	FINDINGS
EL002 - EL - MILLER RD.	Finished Water Storage	The area around the storage tank has evidence of ponding water. This area around the tank within 50 feet must be well drained and graded to facilitate the rapid removal away from the storage tank. The ponding water presents a potential source of contamination and could potentially compromise the integrity of the structure. The recent piping added for the altitude sensor needs to be properly buried and secured within the valve pit. The area of the work needs to be graded to promote positive drainage.
FACILITY	CATEGORY	FINDINGS
EL002 - EL - MILLER RD.	Finished Water Storage	The existing screen for the elevated tower overflow pipe is damaged. The overflow piping must be screened with a four mesh, non-corrodible screen. Replace the damaged screen with a new four mesh, non-corrodible screen to provide protection at all times.

FACILITY	CATEGORY	FINDINGS
EL002 - EL - MILLER RD.	Finished Water Storage	The finished water storage facility (elevated tower) is not equipped with an approved sample tap. The finished water storage facility must be equipped with a smooth-nosed sampling tap. Install an approved tap on the (elevated tower) in a downturned direction to facilitate the collection of water samples for bacteriological and chemical analyses, when needed.
FACILITY	CATEGORY	FINDINGS
TP004 - TP FOR WELL #7 & #9 - JONES	Treatment	The chemical (potassium permanganate) solution tank(s) do not demonstrate proper protection against backflow events. The chemical solution tank(s) shall be properly protected from backflow as required by the reviewing authority. Provide and maintain an approved air gap between the water supply pipe and the rim of the solution tank.
FACILITY	CATEGORY	FINDINGS
TP004 - TP FOR WELL #7 & #9 - JONES	Treatment	The chemical feed tanks are not properly labeled. The chemical feed tanks must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
FACILITY	CATEGORY	FINDINGS
TP004 - TP FOR WELL #7 & #9 - JONES	Treatment	There is a leak in the chemical feed piping supporting the phosphate injection equipment. Chemical was observed puddling on the floor. The leak must be addressed and the spilled chemical properly cleaned up. Employ additional methods, as needed, to manage leaks and spillage of chemicals.
FACILITY	CATEGORY	FINDINGS
1019054-001 - WELL #3 - SHADY N	Source	The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1019054-007 - WELL #7 - JONES	Source	The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

FACILITY	CATEGORY	FINDINGS
1019054-008 - WELL #8 - HILMA ST N	Source	The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1019054-004 - WELL #6 - HILMA ST S	Source	The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The piping in the treatment plant near the finished water pumps is corroded. The piping must be cleaned, treated, and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #3 - SHADY	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. The tap will be placed near the fence on piping exiting the pump room directed south to Shady Street. The pipe leading to the distribution system on the south side of the pump room will be exposed and a smooth nosed sample tap will be placed. This task must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers. An email has been sent to further explain the understanding behind this change.
FACILITY	CATEGORY	FINDINGS
TP008 - TP FOR WELLS #5, #6, #8 - HILMA ST	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. The tap will be placed near the fence on piping exiting the pump room directed west to Hilma Street. The pipe leading to the distribution system on the west side of the pump room will be exposed and a smooth nosed sample tap will be placed. This task must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers. An email has been sent to further explain the understanding behind this change.
FACILITY	CATEGORY	FINDINGS
TP004 - TP FOR WELL #7 & #9 - JONES	Treatment	The point of entry sample tap is not a smooth nosed sample tap. The point of entry tap must be smooth nosed, which is suitable for obtaining samples for bacteriological and chemical analysis.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V

Re: Class I Sanitary Survey  
OAK MEADOWS SUBDIVISION WATER SYSTEM Public Water System  
PWS ID LA1019076  
CALCASIEU Parish

Dear Mr. Booth:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 19, 2018 sanitary survey inspection of the public water supply system for OAK MEADOWS SUBDIVISION WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Steven R. Joubert	Oph-Region V Engineering
Solomon Angwafo	Oph-Region V Engineering
Ian Booth	Booth Environmental Services

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

No observations were recorded in this category.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	From review, the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	The pipes conveying the tetrapotassium pyrophosphate and sodium hypochlorite solutions at the Tuna Lane water plant are exposed and not protected from physical damage or weather related effects. The current placement of pipes may cause a tripping hazard and make the pipes subject to damage. Properly shield these pipes from weather related effect and any possible hazards.
FACILITY	CATEGORY	FINDINGS
HD002 - Hydropneumatic #2 (Stingray Ln)	Finished Water Storage	The air release-vacuum relief valve opening is not screened and not equipped with relief piping in the proper orientation. The air release-vacuum relief valve must be equipped with exhaust/relief piping terminating in a down-turned position at least 18 inches above the tank surface and covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1019083-001 – Well #1 - Tuna S  1019083-002 – Well #2 - Tuna N  1019083-004 – Well #4 – Stingray W  1019083-005 – Well #5 - Stingray E	Source	The sample tap is located downstream of the check valve. The sample tap must be located upstream of the check valve. Water to be drawn from this tap must be reflective of the source.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the two water production (POE) sites. Two critical points (MRT) sites, the locations in the water system furthest from the treatment plants, must be monitored daily. An additional chlorine residual check must be made monthly at the ACR site. These points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Please start measuring and recording the residuals at the locations described using a digital chlorine analyzer. Residuals must also be recorded on signed and dated "LDH Approved Chlorine Residual Forms", which can be found at: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send Region 5 office a copy of the next 3 months of properly recorded, chlorine residual forms.

FACILITY	CATEGORY	FINDINGS
DS0950 – Distribution System	Distribution System	1) There are not many valves in the distribution system. Valves are important devices to manage repairs and general maintenance activities in the distribution system. Valves need to be installed, generally in 800 foot spacing, to minimize inconveniences from interruptions of service and sanitary hazards during repairs. 2) This office acknowledges the installation of the piping linking the north and south portions of the distribution systems. At the time of the survey, this valve was newly installed and kept closed. Please confirm that this assembly will stay open in order to effectively link the north and south plants.
FACILITY	CATEGORY	FINDINGS
1019083-002 – Well #2 - Tuna N	Source	The air release-vacuum relief valve is not screened and not equipped with relief piping in the proper orientation. The air release-vacuum relief valve must be equipped with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen. Please note that this is not referring to the well casing vent.
FACILITY	CATEGORY	FINDINGS
1019083-001 – Well #1 - Tuna S  1019083-002 – Well #2 - Tuna N  1019083-004 – Well #4 – Stingray W  1019083-005 – Well #5 - Stingray E	Source	The well's casing vent piping does not terminate in a downturned orientation. The well must be equipped with a downturned casing vent with appropriate non-corrodible 24 mesh screening, a minimum height of 12 inches above grade or floor, and a minimum diameter of 1½ inch.
FACILITY	CATEGORY	FINDINGS
1019083-001 – Well #1 - Tuna S  1019083-002 – Well #2 - Tuna N	Source	There is currently no pressure gauge installed on the discharge piping of the well. A pressure gauge must be installed as a means to measure the actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to

**this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

P.O. Drawer 3287  
Lake Charles, LA 70602

Re: Level 2 Assessment triggered on May 29, 2018  
CALCASIEU PARISH WW DISTRICT NO 5 Public Water System  
PWS ID LA1019084  
CALCASIEU Parish

Dear Responsible Party:

The Louisiana Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 29, 2018 RTCR Level 2 Assessment of the public water supply system for Calcasieu Parish WW Dist. #5 Water System. The intent of this assessment, in response to multiple positive total coliform samples in a running 12 month period, is to locate sanitary defects the could infer with the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code.

### Parties Present

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Solomon Angwafo	OPH-Region V Engineering
Carie Davis	Calcasieu Parish Police Jury
Terry Frelot	Calcasieu Parish Police Jury
Taran Winston	Calcasieu Parish Police Jury
Marshall Larocque	Calcasieu Parish Police Jury

The RTCR Level 2 Assessment form is enclosed with this letter. Please review the findings of the assessment report. The sanitary defects listed in the table, starting on page 5 of the RTCR Level 2 Assessment Form titled "Issue Descriptions and Corrective Actions" must be corrected and a written response submitted to the department within 30 days of the RTCR Level 2 Assessment triggered on May 25, 2018. The response is due on or before June 24, 2018. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these sanitary defects, then the written response must also contain a request with specific dates when the sanitary defects will be corrected.

## **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the RTCR, significant defects are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### **Significant Defects**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	The current repeat upstream and downstream locations are problematic. The upstream location appears to be too far from the waters main and the downstream location is no longer represented by a service connection. Modify the RTCR worksheet and select locations that are best indicators of water quality while minimizing potential variables from location and premise related issues.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The chemical (potassium permanganate) solution tank does not demonstrate proper protection against backflow events. The chemical solution tank(s) shall be properly protected from backflow. Install an atmospheric vacuum breaker on the hose bib supplying the water to the solution tank and maintain an approved air gap between the water supply hose and the rim of the solution tank, when filling. Hard piped connections to the tank must be broken and capped.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1019084-001 - WELL #1	Source	1. The areas around both wells are wet due to excessive discharge from the well. The discharge from the wells needs to be addressed by minimizing the discharge and routing the remaining discharge away to allow for a 50 feet well-drained area around each well. 2. The casing seal for Well #1 has void(s) that are visible on the top of the casing seal. The void(s) in the casing seal for Well #1 must be eliminated by using best practices to eliminate a potential source of contamination.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1019084-002 - WELL #2	Source	1. The areas around both wells are wet due to excessive discharge from the well. The discharge from the wells needs to be addressed by minimizing the discharge and routing the remaining discharge away to allow for a 50 feet well-drained area around each well. 2. The wiring entering various well components for Well #2 creates a void. The wiring conduits must be repaired to eliminate the possible entrance of foreign substances that could lead to possible contamination.

FACILITY	CATEGORY	FINDINGS
1019084-001 - WELL #1	Source	The well casing is showing signs of rust, corrosion, and flaking paint. The well casing for Well #1 must be cleaned, treated, and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.

**III. Assessment Questions**

**A. Source – Well**

*\*If PWS does not use a well source check here and skip to subsection B ☐*

<b>Which well sources were not used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Was a new source activated?		X		
2. Is the ground graded to prevent surface water flow towards the well?		X		
3. Does the well casing extend at least 18" above the ground?	X			
4. Is the exposed portion of the well casing in good condition?		X		
5. Does the well have a secured sanitary seal well cap?		X		
6. Is the sanitary seal well cap vented and screened?	X			
7. Is there a down turned well vent that is at least 24 inches above the ground surface?	X			
8. Are appropriate backflow prevention devices installed, maintained and tested on all cross connections?	X			
9. Does raw water quality data indicate changes to the source water quality?		X		
10. Has source yield changed?		X		
11. Are there obvious sources of contamination in the vicinity of the well?	X			
12. Was the well pump recently repaired or replaced?		X		
13. Are there signs of vandalism at the well?		X		
14. Have there been any unusual weather events that may have impacted the well?		X		
15. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the well?		X		

**Assessor Name: Steven R. Joubert, P.E.**

**B. Source – Surface Water**

*\*If PWS does not use a surface water source check here and skip to subsection C ☒*

<b>Which surface water sources were used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Is the surface water intake screened and maintained?				
2. Is the pump house protected from unauthorized personnel?				
3. Does raw water quality data indicate changes to the source water quality?				
4. Are there obvious sources of contamination within the nearby watershed?				
5. Are there signs of vandalism at the surface water intake?				
6. Have severe weather events such as heavy rainfall, rapid snowmelt, drought, or reservoir turnover occurred?				
7. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the source?				

**Assessor Name:**

**Engineering Services – Safe Drinking Water Program**  
**RTCR Level 2 Assessment Form**

**B. Treatment Processes**

Questions:	YES	NO	N/A	Unk.
1. Have there been interruptions in any treatment processes?		X		
2. Has the treatment plant(s) or finished water pump(s) experienced any power interruptions?		X		
3. Has there been any recent installation or repair of treatment equipment?		X		
4. Have there been changes to any treatment processes?		X		
5. Does water quality data indicate inadequate/inappropriate treatment of water?		X		
6. Are all treatment processes operational and maintained?	X			
7. Is there an air gap between treatment instrumentation and waste lines?		X		
8. Were there any failures to meet required CT values?		X		
9. Did treatment plant flow rates exceed the permitted capacity?		X		
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?			X	
11. Did a review of the turbidity data reveal any anomalies?			X	
12. Did a review of chlorine residual data reveal any anomalies or deficiencies?		X		

**Assessor Name: Steven R. Joubert, P.E.**

**C. Distribution System**

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?		X		
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?		X		
3. If samples were collected from inside a building, does the site have additional water treatment installed?		X		
4. Is there evidence that the system experienced low or negative pressure?		X		
5. Was there any scheduled flushing of the distribution system?		X		
6. Are pump stations protected from unauthorized personnel?	X			
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?	X			
8. Are air relief valves maintained and operational without leaks?			X	
9. Are pump stations maintained and equipment operational?	X			
10. Are fire hydrants and blow offs maintained and operational without leaks?	X			
11. Does water quality data collected in the distribution system show results indicative of an issue?	X			
12. Have any water related customer complaints been received?		X		
13. Is there any evidence of intentional contamination in the distribution system?		X

**D. Storage Tanks**

*\*If no storage tank check here and skip to section IV. ☐*

Questions:	YES	NO	N/A	Unk.
1. Is the pressure tank maintaining an appropriate minimum pressure?	X			
2. Are all vents and overflow pipes screened?	X			
3. Is the tank maintained and free of rust, holes and leaks?	X			
4. Are there any unsealed openings in the storage facility such as access doors, vents or joints?		X		
5. Are signs of vandalism visible?		X		
6. Are roof hatches and manhole openings tightly covered and locked?	X			
7. Do downspouts and overflow pipes drain water away from structure?	X			
8. Have all storage tanks been inspected and cleaned within the last 5 years?	X			
9. Were there any repair activities associated with the storage tanks?		X		

**Assessor Name: Steven R. Joubert, P.E.**

**E. Water Quality Data Table**

Parameter	Number of Each Sample Type Collected		
	Raw (0)	Entry Point (1)	Distribution (3)
Chlorine Residual (mg/L)		1.91, Plant	1.52ppm, TCR-013 1.65ppm, RPUP 1.48ppm, RPDN
Turbidity (NTU)

Lake Charles, LA 70605

Re: Class I Sanitary Survey  
FAIRVIEW MOBILE ESTATES SOUTH WS Public Water System  
PWS ID LA1019096  
CALCASIEU Parish

Dear Mr. Reeds:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 2, 2018 sanitary survey inspection of the public water supply system for FAIRVIEW MOBILE ESTATES SOUTH WS (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
Danny Murchison	Fairview Mobile Estates N & S

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

**No observations were recorded in this category.**

### **Minor Deficiencies**

**No observations were recorded in this category.**

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 - TP FOR WELL #1, #2	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. Please, install a POE sample before any point of use (trailers). The point of entry tap must be smooth nosed, which is suitable for obtaining samples for bacteriological and chemical analysis. See enclosed illustrations. The red "x" indicates unapproved locations. The blue circle indicates an approved location. Anywhere on this discharge pipe prior to the first customer is acceptable.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Solomon Angwafo, E.I.

SOUTH CALCASIEU ESTATES SUBDIVISION W S Public Water System  
PWS ID LA1019098  
CALCASIEU Parish

Dear Ms. Petranek:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the February 9, 2018 sanitary survey inspection of the public water supply system for SOUTH CALCASIEU ESTATES SUBDIVISION W S (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## Parties Present

Name	Organization

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

COPY

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1019098-001 - WELL #1 - SOUTH	Source	The sample tap is located downstream of the check valve. The sample tap must be located upstream of the check valve. Water to be drawn from this tap must be reflective of the source.
FACILITY	CATEGORY	FINDINGS
1019098-002 - WELL #2 - NORTH	Source	The sample tap is located downstream of the check valve. The sample tap must be located upstream of the check valve. Water to be drawn from this tap must be reflective of the source.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily. An additional chlorine residual check must be made monthly at the ACR site. These points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Please start measuring and recording the residuals at the locations described using a digital chlorine analyzer. Residuals must also be recorded on signed and dated "LDH Approved Chlorine Residual Forms", which can be found at: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 5 office a copy of the next 3 months of properly recorded chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1, #2	Treatment	The chemical feed tanks for sodium hypochlorite and phosphate are not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
FACILITY	CATEGORY	FINDINGS
1019098-001 - WELL #1 - SOUTH	Source	The well is not equipped with a casing vent. The well must be equipped with a downturned casing vent with appropriate non-corrodible 24 mesh screening, a minimum of height of 12 above grade or floor, and a minimum diameter of 1 inch.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to

correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

Re: Class I Sanitary Survey  
GIFFORD MOBILE HOME PARK I Public Water System  
PWS ID LA1019101  
CALCASIEU Parish

Dear Mr. Vidrine:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 16, 2018 sanitary survey inspection of the public water supply system for GIFFORD MOBILE HOME PARK I (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
Austin Booth	Booth Environmental Services

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations****No unresolved observations were recorded in this category.****Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water system is not equipped with a source of dedicated standby power. The water system must explore every effort to obtain dedicated standby power. To ensure continuous service when the primary power has been interrupted, a standby power supply shall be provided through connection to at least two independent public power sources, or portable or in-place auxiliary power.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
1019101-002 - WELL #2 - NORTH	Source	The existing pressure gauge is broken and located in the wrong location. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1019101-002 - WELL #2 - NORTH	Source	The air release-vacuum relief valve is not screened and not equipped with relief valve piping in the proper orientation. The air release-vacuum relief valve must be equipped with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1019101-002 - WELL #2 - NORTH	Source	The check valve on the well is leaking and covered with organic growth. The check valves needs to be repaired or replaced to eliminate the potential for contamination.
FACILITY	CATEGORY	FINDINGS
1019101-002 - WELL #2 - NORTH  1019101-001 - WELL #1 - SOUTH	Source	The casing vents piping on the wells are showing signs of heavy rusting, corrosion, and flaking paint. The casing vents piping must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the casing vent piping of these wells to prevent any sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
GR001 - PLANT - SOUTH	Finished Water Storage	The overflow pipe appears to have some pores and cracks near the top of the ground storage tank. The overflow pipe must be repaired to prevent the entrance of birds, insects, dust or other contaminating material.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
GR001 - PLANT - SOUTH	Finished Water Storage	From review, the finished water storage facilities (ground storage tanks, and hydro pneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facility could benefit from an inspection.

HD004 MARCANTEL		

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1, #2, #3	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized. The water system currently uses automatic switch over between 2 - 150 lb. gas cylinders to guarantee continuous disinfection.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Solomon Angwafo, E.I.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

### **Bacteriological Sampling History**

#### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

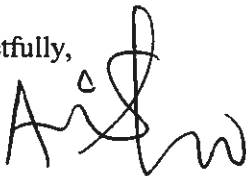

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3232.

Respectfully,

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water system is not equipped with a source of dedicated standby power. The water system must explore every effort to obtain dedicated standby power. To ensure continuous service when the primary power has been interrupted, a standby power supply shall be provided through connection to at least two independent public power sources, or portable or in-place auxiliary power.
FACILITY	CATEGORY	FINDINGS
1019115-002 - WELL #2 - WEST	Source	The well is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve and shall terminate in a downward direction. The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap. A minimum clearance of 12 inches must be provided underneath the raw water sample tap.
FACILITY	CATEGORY	FINDINGS
1019115-001 - WELL #1- EAST	Source	This well is currently inactive. At least two (2) sources of groundwater are not provided. At least two sources of groundwater must be provided. The total developed groundwater source capacity, unless otherwise specified by the reviewing authority, shall equal or exceed the design maximum day demand with the largest producing well out of service. A backup or emergency connection to another approved public water supply may suffice as a second source of water provided that source can meet demand. All sources of water must be approved by the LA Dept. of Health.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
HD002 - HYDROPNEUMATIC #2 WEST	Finished Water Storage	The water sight glass for the hydropneumatic tank is broken. A water sight glass must be provided on the hydropneumatic tank and operational. Replace the water sight glass on the hydropneumatic tank to provide for a means of measuring the contents being stored in the tank.
FACILITY	CATEGORY	FINDINGS
1019115-002 - WELL #2 - WEST	Source	The well does not currently have an air release valve installed. Where applicable, the discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh, corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1019115-002 - WELL #2 - WEST	Source	The well is not equipped with a casing vent that terminates in a downturned orientation. The well must be equipped with a casing vent with appropriate non-corrodible 24 mesh screening. It must be installed to terminate in a downturned position and at a minimum height of 12 inches above grade or floor and must have a minimum diameter of 1.5 inches.
FACILITY	CATEGORY	FINDINGS
1019115-001 - WELL #1- EAST	Source	The well is not equipped with a casing vent that terminates in a downturned orientation. The well must be equipped with a casing vent with appropriate non-corrodible 24 mesh screening. It must be installed to terminate in a downturned position and at a minimum height of 12 inches above grade or floor and must have a minimum diameter of 1.5 inches
FACILITY	CATEGORY	FINDINGS
1019115-001 - WELL #1- EAST  1019115-002 - WELL #2 - WEST	Source	There is currently no pressure gauge installed on the discharge piping of the well. A pressure gauge must be installed on the discharge piping upstream of the check valve as a means to measure the actual operating head conditions. Install a pressure gauge on the well discharge piping to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

**No observations were recorded in this category.**

### **Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The total number of active service connections for the water system along with the population has increased significantly. This growth calls for additional TCR sampling points and increased monitoring within the distribution system. The water system must therefore install additional TCR sampling points within the distribution system. Guidance on possible site locations is being sent via email. Repeat sites to these TCR Sites will also need to be set up. The monitoring plan will be returned for updates. Please consult with LDH Region 5 OPH for the locations of the proposed TCR sampling points.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1, #2, #3	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized. The water system currently uses automatic switch over between the 150 lb. gas cylinders to guarantee continuous disinfection.

GULF STREAM MANOR Public Water System  
PWS ID LA1019123  
CALCASIEU Parish

Dear Responsible Party:

The Louisiana Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 19, 2018 RTCR Level 2 Assessment of the public water supply system for Gulf Stream Manor Water System. The intent of this assessment, in response to multiple positive total coliform samples in a running 12 month period, is to locate sanitary defects the could infer with the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code.

### Parties Present

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Solomon Angwafo	OPH-Region V Engineering
Mike Thomas	Gulf Stream Manor Water Supply

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the RTCR, significant defects are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Defects

FACILITY	CATEGORY	FINDINGS
Management	Other	The water plant area is littered with construction debris and covered in high grass. Remove construction debris and cut/maintain the grass in the plant area.
FACILITY	CATEGORY	FINDINGS
1019123-001 - WELL #1 - NORTH	Source	1. The discharge pipe of Well #1 - North has a leak. Repair the leak in the discharge piping of Well #1 - North. 2. The well casing vent is broken and not equipped with an appropriate screen. The well must be equipped with a downturned casing vent, having a minimum height of 12 inches above grade or floor and a minimum diameter of 1 inch. The vent opening must be covered with an appropriate non-corrodible 24-mesh screen. Repair the well casing vent and install an appropriate screen to prevent the entrance of contaminants. 3. The conduit for the wiring for Well #1- North is broken. The cracked conduit provides for the possible entrance of foreign substances, insects, or organisms that could lead to bacteriological contamination. Replace the cracked conduit to prevent bacteriological contamination.
FACILITY	CATEGORY	FINDINGS
1019123-001 - WELL #1 - NORTH	Source	The discharge piping for the well and the associated piping leading to the hydropneumatic storage tank is showing signs of rust, corrosion, and flaking paint. The piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
1019123-002 - WELL #2 - SOUTH	Source	The discharge piping for the well and the associated piping leading to the hydropneumatic storage tank is showing signs of rust, corrosion, and flaking paint. The piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.

The following compliance history is provided for your information

### Bacteriological Sampling History

#### Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

### Violation History

#### Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

**III. Assessment Questions**

**A. Source – Well**

*\*If PWS does not use a well source check here and skip to subsection B ☐*

<b>Which well sources were not used during the monitoring period?</b> <b>Questions:</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
1. Was a new source activated?		X		
2. Is the ground graded to prevent surface water flow towards the well?	X			
3. Does the well casing extend at least 18" above the ground?	X			
4. Is the exposed portion of the well casing in good condition?	X			
5. Does the well have a secured sanitary seal well cap?	X			
6. Is the sanitary seal well cap vented and screened?		X		
7. Is there a down turned well vent that is at least 24 inches above the ground surface?	X			
8. Are appropriate backflow prevention devices installed, maintained and tested on all cross connections?	X			
9. Does raw water quality data indicate changes to the source water quality?		X		
10. Has source yield changed?		X		
11. Are there obvious sources of contamination in the vicinity of the well?	X			
12. Was the well pump recently repaired or replaced?		X		
13. Are there signs of vandalism at the well?		X		
14. Have there been any unusual weather events that may have impacted the well?		X		
15. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the well?		X		
16. Is the well discharge piping in good condition?		X		

**Assessor Name: Steven R. Joubert, P.E.**

**B. Source – Surface Water**

*\*If PWS does not use a surface water source check here and skip to subsection C ☒*

<b>Which surface water sources were used during the monitoring period?</b> <b>Questions:</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
1. Is the surface water intake screened and maintained?				
2. Is the pump house protected from unauthorized personnel?				
3. Does raw water quality data indicate changes to the source water quality?				
4. Are there obvious sources of contamination within the nearby watershed?				
5. Are there signs of vandalism at the surface water intake?				
6. Have severe weather events such as heavy rainfall, rapid snowmelt, drought, or reservoir turnover occurred?				
7. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the source?				

**Assessor Name:**

**Louisiana Department of Health, Office of Public Health**  
**Engineering Services – Safe Drinking Water Program**  
**RTCR Level 2 Assessment Form**

**C. Treatment Processes**

Questions:	YES	NO	N/A	Unk.
1. Have there been interruptions in any treatment processes?		X		
2. Has the treatment plant(s) or finished water pump(s) experienced any power interruptions?		X		
3. Has there been any recent installation or repair of treatment equipment?		X		
4. Have there been changes to any treatment processes?		X		
5. Does water quality data indicate inadequate/inappropriate treatment of water?		X		
6. Are all treatment processes operational and maintained?	X			
7. Is there an air gap between treatment instrumentation and waste lines?		X		
8. Were there any failures to meet required CT values?		X		
9. Did treatment plant flow rates exceed the permitted capacity?		X		
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?			X	
11. Did a review of the turbidity data reveal any anomalies?			X	
12. Did a review of chlorine residual data reveal any anomalies or deficiencies?		X		

**Assessor Name: Steven R. Joubert, P.E.**

**D. Distribution System**

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?		X		
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?		X		
3. If samples were collected from inside a building, does the site have additional water treatment installed?		X		
4. Is there evidence that the system experienced low or negative pressure?		X		
5. Was there any scheduled flushing of the distribution system?		X		
6. Are pump stations protected from unauthorized personnel?	X			
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?	X			
8. Are air relief valves maintained and operational without leaks?			X	
9. Are pump stations maintained and equipment operational?			X	
10. Are fire hydrants and blow offs maintained and operational without leaks?	X			
11. Does water quality data collected in the distribution system show results indicative of an issue?		X		
12. Have any water related customer complaints been received?		X		
13. Is there any evidence of intentional contamination in the distribution system?		X		

**Assessor Name: Steven R. Joubert, P.E.**

**Louisiana Department of Health, Office of Public Health**  
**Engineering Services – Safe Drinking Water Program**  
**RTCR Level 2 Assessment Form**

**E. Storage Tanks**

*\*If no storage tank check here and skip to section IV. ☐*

Questions:	YES	NO	N/A	Unk.
1. Is the pressure tank maintaining an appropriate minimum pressure?	X			
2. Are all vents and overflow pipes screened?			X	
3. Is the tank maintained and free of rust, holes and leaks?	X			
4. Are there any unsealed openings in the storage facility such as access doors, vents or joints?		X		
5. Are signs of vandalism visible?		X		
6. Are roof hatches and manhole openings tightly covered and locked?	X			
7. Do downspouts and overflow pipes drain water away from structure?			X	
8. Have all storage tanks been inspected and cleaned within the last 5 years?				X
9. Were there any repair activities associated with the storage tanks?		X		

**Assessor Name: Steven R. Joubert, P.E.**

**IV. Water Quality Data Table**

Parameter	Number of Each Sample Type Collected		
	Raw (0)	Entry Point (1)	Distribution (0)
Chlorine Residual (mg/L)		1.72, Plant	
Turbidity (NTU)			
Coliform Bacteria			
Other (specify below)

**RTCR Level 2 Assessment Form**

**V. Issue Descriptions and Corrective Actions (Use page 8 to report additional issues)**

*\* No issues were found during the assessment:* ☐

<b>Issue Description (list section letter and #)</b> <b>A.6.</b>	<b>Corrective Action</b>
The well casing vent is broken and not equipped with an appropriate screen.	The well must be equipped with a downturned casing vent, having a minimum height of 12 inches above grade or floor and a minimum diameter of 1 inch. The vent opening must be covered with an appropriate non-corrodible 24-mesh screen. Repair the well casing vent and install an appropriate screen to prevent the entrance of contaminants.

<b>Issue Description (list section letter and #)</b> <b>A.11.</b>	<b>Corrective Action</b>
<ol style="list-style-type: none"><li>1. The water plant area is littered with construction debris and covered in high grass.</li><li>2. The conduit for the wiring for Well #1 – North is broken.</li></ol>	<ol style="list-style-type: none"><li>1. Remove construction debris and cut/maintain the grass in the plant area.</li><li>2. The cracked conduit provides for the possible entrance of foreign substances, insects, or organisms that could lead to bacteriological contamination. Replace the cracked conduit to prevent bacteriological contamination.</li></ol>

CERTIFIED MAIL: 7017 1070 0000 1127 3337

September 12, 2018

Audrey Miles  
MILES MOBILE HOME PARK  
7864 Nelson Road Lot 14  
Lake Charles, LA 70605

Re: Class I Sanitary Survey  
MILES MOBILE HOME PARK Public Water System  
PWS ID LA1019125  
CALCASIEU Parish

Dear Ms. Miles:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the September 10, 2018 sanitary survey inspection of the public water supply system for MILES MOBILE HOME PARK (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
Shawn Corley	Miles Mobile Home Park

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
12/14/2015	12/15/2015	Formal Enforcement	Minor	Finished Water Storage	HD001-HYDROPNEUMATIC - LEFT
<b>Comments:</b> The hydropneumatic tank is not equipped with a water sight glass. Hydropneumatic tanks must be equipped with a water sight glass.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
12/14/2015	12/15/2015	Formal Enforcement	Minor	Finished Water Storage	HD002-HYDROPNEUMATIC - RIGHT
<b>Comments:</b> The hydropneumatic tank is not equipped with a water sight glass. Hydropneumatic tanks must be equipped with a water sight glass.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The water system is not under the control and supervision of a duly certified operator. The water system, per population and system design at the time of the survey, must be placed under the supervision and control of a certified operator holding at least level one (1) certifications in the categories of Water Production and Water Distribution. The operator certification office can be reached by phone at (225) 342-7508. The operator certification website is: <a href="http://www.dhh.louisiana.gov/index.cfm/page/416">http://www.dhh.louisiana.gov/index.cfm/page/416</a>
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water system is not equipped with a source of dedicated standby power. The water system must explore every effort to obtain dedicated standby power. To ensure continuous service when the primary power has been interrupted, a standby power supply shall be provided through connection to at least two independent public power sources, or portable or in-place auxiliary power.
FACILITY	CATEGORY	FINDINGS
1019125-002 - WELL #2 - SOUTH	Source	The well is missing an approved sample tap. An approved sample tap must be provided upstream of the well discharge line check valve and shall terminate in a downward direction. The sample tap must be the smooth nozzle type.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 5 office a copy of the next three (3) months of properly recorded, chlorine residual forms
FACILITY	CATEGORY	FINDINGS
1019125-002 - WELL #2 - SOUTH	Source	1) The well is not equipped with a means of measuring flow. A means of measuring flow must be provided. 2) The check valve intended for this well is not positioned in the appropriate location. A check valve must be installed on the well discharge line prior to the junction with the common header pipe accepting flow from both wells into the storage tank.
FACILITY	CATEGORY	FINDINGS
1019125-001 - WELL #1 - NORTH	Source	The well is not equipped with a means of measuring flow. A means of measuring flow should be provided.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V

Office of Public Health

CERTIFIED MAIL: 7017 1070 0000 1127 4662

June 26, 2018

Preston Richard  
K & P MH & RV PARK WATER SYSTEM  
7896 Nelson Road  
Lake Charles, LA 70605

Re: Class I Sanitary Survey  
K & P MH & RV PARK WATER SYSTEM Public Water System  
PWS ID LA1019127  
CALCASIEU Parish

Dear Mr. Richard:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 19, 2018 sanitary survey inspection of the public water supply system for K & P MH & RV PARK WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
Steven R. Joubert	OPH-Region V Engineering
Ian Booth	Booth Environmental Services

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system has installed the required double check valve at each RV spaces. It was unclear during the survey, if these double check valves were tested during installation. All cross connection control devices must be tested upon installation and annually thereafter. Provide documentation that the double check valves were tested when installed. Testing must be continued annually between sanitary survey visits.

### Minor Deficiencies

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

Dear Mr. Shamburger:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 23, 2018 sanitary survey inspection of the public water supply system for WESTLAKE CHEMICAL CORP WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Solomon Angwafo	OPH-Region V Engineering
Jason Plauche	Westlake Chemical Corporation
John Shamburger	Westlake Chemical Corporation

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
2019016-004 - WELL #20	Source	The area around the well is excessively wet. The area around the well must be well drained and facilitate the rapid removal of water within a 50' radius of the well. The ponding water presents a potential source of contamination.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
2019016-011 - WELL #33	Source	The air release-vacuum relief valve piping is not covered by a 24 mesh corrosion resistant screen. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP002 - TP FOR WELL #20 TP003 - TP FOR WELL #27 TP004 - TP FOR WELL #33 TP005 - TP FOR WELL #34 TP007 - TP FOR WELL #38	Treatment	1-ton or larger containers of chlorine gas are not properly protected from direct sunlight. 1-ton or larger containers of chlorine gas must be properly protected from direct sunlight. A complete enclosure is not required.
FACILITY	CATEGORY	FINDINGS
TP002 - TP FOR WELL #20 TP003 - TP FOR WELL #27 TP004 - TP FOR WELL #33 TP005 - TP FOR WELL #34 TP007 - TP FOR WELL #38	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Steven R. Joubert, P.E.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3214.

Respectfully,

Steven R. Joubert, P.E.  
District Engineer

Re: Class I Sanitary Survey  
PHILLIPS 66 LAKE CHARLES REFINERY Public Water System  
PWS ID LA2019017  
CALCASIEU Parish

Dear Ms. Lewis:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 24, 2018 sanitary survey inspection of the public water supply system for PHILLIPS 66 LAKE CHARLES REFINERY (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Solomon Angwafo	OPH - Region V Engineering
Frank Adam	Phillips 66 Lake Charles Refinery
Yukki Lewis	Phillips 66 Lake Charles Refinery
Cindy Natali	Phillips 66 Lake Charles Refinery

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH

determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	The piping (raw and finished water) within the storage tank building and surrounding area is severely corroded. The piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination. Some of the piping in the area maybe passed the point of treatment and painting.
FACILITY	CATEGORY	FINDINGS
2019017-001 - WELL #11	Source	The area around the well is wet due to excessive discharge from the well. The ponding water presents a potential source of contamination. The discharge from the well needs to be addressed.
FACILITY	CATEGORY	FINDINGS
2019017-004 - WELL #21	Source	The sample tap for this well is down stream of the check valve. A sample tap must be installed upstream of the check valve. It must terminate in a downward direction and be of the smooth nozzle type.
FACILITY	CATEGORY	FINDINGS
2019017-002 - WELL #13	Source	The well has a significant leak. The leak has been documented by the water system and added to a maintenance list. The well must be free of leaks that serve as a pathway for contamination of the water being produced.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE	Finished Water Storage	From review, the finished water storage facility (ground storage tank) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facility could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL # 11, #13, #21, #22	Treatment	The pump for the chemical application of the sodium hypochlorite solution is below the level line of the chemical within the feed tank. The pump must be placed in a position of positive pressure above the highest possible chemical level line of the feed tank.
FACILITY	CATEGORY	FINDINGS
2019017-001 - WELL #11 2019017-002 - WELL #13	Source	1) The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination. 2) The vegetation around the well slab can affect the wells function and quality. Remove vegetation from around the well slab.
FACILITY	CATEGORY	FINDINGS
2019017-002 - WELL #13	Source	A segment of the air release-vacuum relief valve appears to be detached leaving the device exposed to the surroundings. Repair the air release-vacuum relief valve to protect against the potential entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
2019017-005 - WELL #22	Source	The well casing vent is not screened. The casing vent piping must be covered with a 24 mesh, non-corrodible screen to protect against the potential entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
2019017-004 - WELL #21	Source	The well is not equipped with a casing vent. The well must be equipped with a downturned casing vent with appropriate non-corrodible, 24 mesh screening. It must be installed at a minimum height of 12 inches above the grade or floor and must have a minimum diameter of 1½ inches.

FACILITY	CATEGORY	FINDINGS
2019017-004 - WELL #21	Source	The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

**The significant deficiencies listed in the above table titled ‘Significant Deficiencies’ must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

### **FORMAL CROSS CONNECTION CONTROL SURVEY**

Louisiana Revised Statute 40:4.12.b.1.c.iii requires that a formal cross connection control survey be performed by a “qualified individual”. This office recommends that the formal cross connection control survey be conducted by an individual/entity formally trained in cross connection identification and control measures.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Solomon Angwafo, E.I.  
707-A East Prien Lake Road

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

COPY

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	Testing reports for the cross connection control devices could not be confirmed. All cross connection control devices must be tested annually by a certified tester.
FACILITY	CATEGORY	FINDINGS
2019021-005 - WELL #4 - MOTORPOOL	Source	The wiring entering the casing seal creates a void. Additionally, the current casing seal has other void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate all voids in the casing seal to prevent bacteriological contamination.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
HD003 - HYDROPNEUMATIC - MOTOR POOL	Finished Water Storage	From review the finished water storage facilities (elevated towers, ground storage tanks, and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE	Finished Water Storage	The overflow pipe is not screened. The overflow pipe must be screened with 24 mesh non-corrodible screen and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
TP003 - TP FOR WELL #4 - MOTOR POOL	Treatment	There is no secondary containment provided for the chemical being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment for the phosphate storage tank with a sufficient containment volume.
FACILITY	CATEGORY	FINDINGS
TP002 - TP FOR WELL #5 - WEST AREA	Treatment	There is no secondary containment provided for the chemical being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment for the phosphate storage tank with a sufficient containment volume.

FACILITY	CATEGORY	FINDINGS
2019021-003 - WELL #3 - NEAR FIRE TANK	Source	The air release-vacuum relief valve piping is not covered by a 24 mesh corrosion resistant screen. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
2019021-005 - WELL #4 - MOTORPOOL	Source	The air release-vacuum relief valve piping is not covered by a 24 mesh corrosion resistant screen. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The current monitoring plan for the water system needs to be updated. All public water systems must have a monitoring plan that includes all required routine compliance samples to be collected for the monitoring period. Every sampling site must have the correct address and description of the location. Update and re-submit the Monitoring Plan for LDH review and approval. The Monitoring Plan Portal for the public water system can be found on LDHs website at: <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a> The MRT has been inactivated. A new MRT needs to be established in the water system furthest from the water plant (consider the RV space furthest north). TCR-001 at 7th to last RV lot and TCR-002 at 6th RV lot were not visible onsite and have been inactivated on the monitoring plan. A TCR point needs to be installed furthest south on the west row of RVs. The TCR point available at the Bingo Hall needs to be added and activated on the plans. A new ACR point can be located on any of the other RV spaces (not on the last row) as far from the POE as possible. Please call S. Joubert at 1-337-475-3214 for any questions.
FACILITY	CATEGORY	FINDINGS
2019070-002 - WELL #2 - SOUTH	Source	The well's casing vent is not properly attached. The well's casing vent must be properly attached to prevent the introduction of contamination into the well casing.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website at the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 5 office a copy of the next three (3) months of properly recorded, chlorine residual forms. LDH must be contacted for confirmation of these locations; plan changes are needed.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Re: Class I Sanitary Survey  
LAKE CHARLES LNG CO WATER SYSTEM Public Water System  
PWS ID LA2019098  
CALCASIEU Parish

Dear Mr. Couch:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 16, 2018 sanitary survey inspection of the public water supply system for LAKE CHARLES LNG CO WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
Steve Couch	Lake Charles LNG Company LLC
Dillian Beechler	Lake Charles LNG Company LLC
Brian K. Hebert	Lake Charles LNG Company LLC
Austin Booth	Booth Environmental Services

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a

failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The ground storage tank overflow pipe is currently submerged into the drain inlet pipe creating a cross connection. There shall be no connection or arrangement by which unsafe water may enter a public water supply system. The ground storage tank's overflow pipe must discharge over a splash pad or drain inlet pipe or structure with an appropriate 12 to 24 inches separation and be screened with an appropriate 24 mesh non-corrodible screen.

### **Minor Deficiencies**

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

### **FORMAL CROSS CONNECTION CONTROL SURVEY**

Louisiana Revised Statute 40:4.12.b.1.c.iii requires that a formal cross connection control survey be performed by a "qualified individual". This office recommends that the formal cross connection control survey be conducted by an individual/entity formally trained in cross connection identification and control measures.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	An approved chemical lab status certification has not been obtained from LDH for analyzing the physical and chemical analytes currently being monitored by the water system. All public water systems must use an approved chemical laboratory to perform all required chemical analyses using approved laboratory methodologies. Review the required instruction at <a href="http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf">http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf</a> and complete the required form located at <a href="http://ldh.la.gov/index.cfm/page/963">http://ldh.la.gov/index.cfm/page/963</a> under the heading Approved Laboratory Form (Instructions).
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	All RV sites must be equipped with dual check valve assemblies. Please submit a written course of action, for review and approval, which details a timeline for installing the required protection at the RV sites. The specifications for any device to be installed must be submitted for review and approval by this office. Do not make any changes to the existing water system without prior written approval or understanding.
FACILITY	CATEGORY	FINDINGS
2019125-001 - WELL #1	Source	1.) The well does not have a concrete cover slab. The well shall have a concrete cover slab of at least 4 inches thick and extend at least 2.5 feet in all directions. 2.) The wiring entering the casing seal creates a void. The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate any voids in the casing seal to prevent bacteriological contamination.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Several TCR taps are double sided and share connections with hose bibs. Sampling stations must not share piping and space with other points of usage that could provide for negative influences and yield sampling results that may not be consistent with water quality. Configure the sampling stations to support monitoring only without any undue influences.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	The sampling tap has been installed in the place of the sight glass. The tap must be removed for proper placement of the sight glass. The tap must be relocated to be representative of the water in the tank.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	The water sight glass for the hydropneumatic tank is missing. A water sight glass must be provided on the hydropneumatic tank. The water sight glass on the hydropneumatic tank is needed to provide for a means of measuring the contents being stored in the tank.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1	Treatment	The water system currently uses a phosphate for sequestering iron and manganese. All public water systems that use phosphates for treatment must have test equipment capable of monitoring and measuring total phosphate. The total phosphate applied shall not exceed 10 mg/L measured as PO <sub>4</sub> . Obtain adequate testing equipment and begin monitoring the dosage to insure that the total phosphate does not exceed this limit.
FACILITY	CATEGORY	FINDINGS
2019125-001 - WELL #1	Source	A segment of the air release-vacuum relief valve appears to be detached leaving the device exposed to the surroundings. Repair the air release-vacuum relief valve to protect against the potential entrance of contaminants. The air release-vacuum relief valve must be equipped with exhaust/relief piping terminating in a down-turned position at least 18 inches above floor level and covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
2019125-001 - WELL #1	Source	The well's discharge piping is not equipped with a working pressure gauge or a flow-measuring device. A working pressure gauge and a means for measuring flow must be provided. Install a device or implement monitoring methods to measure flow from the well and install a working pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

Re: Class I Sanitary Survey  
CASH MAGIC-VINTON WATER SYSTEM Public Water System  
PWS ID LA2019129  
CALCASIEU Parish

Dear Mr. Blessings:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 3, 2018 sanitary survey inspection of the public water supply system for CASH MAGIC-VINTON WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Danny Simon	Howell Environmental

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
2019129-002 - WELL #2 - SOUTH	Source	The wiring entering the casing seal creates a void. The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate any voids in the casing seal to prevent bacteriological contamination.
FACILITY	CATEGORY	FINDINGS
2019129-001 - WELL #1 - NORTH	Source	The wiring entering the casing seal creates a void. The split casing also creates a void space. The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate any voids in the casing seal to prevent bacteriological contamination.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	A review of the records reflect daily monitoring of the chlorine residual between weekly checks by the operator on Monday may not be correct. The procedure for testing chlorine residuals must be reviewed with the certified operator. During the survey, it was apparent that the methods being used by the water system to check daily chlorine residuals were being performed incorrectly. Personnel should be train on how to correctly use the equipment that is being used to sample for chlorine residuals. The operator's directions must be followed to ensure compliance with minimum disinfection residuals. Chlorine residuals must be monitored daily at the water production (POE - near the tank) site and recorded on the approved LDH Report #1. A critical point (MRT - Tap on exterior of Casino), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR (Customer Restroom) site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine

		residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer, as directed by the operator, and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 5 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The TCR tap at the building is a double sided with the connection of a hose bib. Sampling station must not share piping and space with other points of usage that could provide for negative influences and yield sampling results that may not be consistent with water quality. Configure the sampling station to support monitoring only without any undue influences.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	The water sight glass for the hydropneumatic tank is broken. A water sight glass must be provided on the hydropneumatic tank. Replace the water sight glass on the hydropneumatic tank to provide for a means of measuring the contents being stored in the tank.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1, #2	Treatment	The records available for chlorine residuals checked at the facility show that a minimum free chlorine residual is not being maintained through the distribution system. Confirm that residuals are being measured properly and make adjustments, under the direction of the operator, in the quantity of chemical being injected into the water system to ensure the proper minimum free chlorine residual of 0.5 mg/l is present throughout the distribution system.
FACILITY	CATEGORY	FINDINGS
2019129-001 - WELL #1 - NORTH	Source	1. The well is equipped with a check valve that appears to be malfunctioning. The well must be equipped with a working check valve. 2. The well's discharge piping is not equipped with a working pressure gauge or a flow-measuring device. A working pressure gauge and a means for measuring flow must be provided. Install a device or implement monitoring methods to measure flow from the well and install a working pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
2019129-002 - WELL #2 - SOUTH	Source	1. The well is equipped with a check valve that appears to be malfunctioning. The well must be equipped with a working check valve. 2. The well's discharge piping is not equipped with a working pressure gauge or a flow-measuring device. A working pressure gauge and a

		means for measuring flow must be provided. Install a device or implement monitoring methods to measure flow from the well and install a working pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

COPY

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system's revised total coliform monitoring plan is outdated and has been returned for updating. The current MRT does not represent the Maximum Residence Time and has been made inactive and a new MRT needs to be placed at a point furthest from water production. An additional TCR site is also needed to cover newly added unrepresented areas of the distribution system. This task can be accomplished by logging into the Monitoring Plan Portal at <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a> . OPH Region 5 engineering staff can be reached by phone @ 337-475-3214 to discuss the review and approval of the monitoring plan and subsequent changes to the Repeat Sites worksheet.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	1. The fire line actively tied to the water system must have a double check valve assembly. A double check valve assembly is defined as an assembly with 2 independently operating spring loaded check valves, with tightly closing shut off valves on each side of the check valves, plus properly located test cocks for the testing of each check valve. This is a testable device and must be tested upon inception and annually by a certified backflow tester. The fire line represents a cross-connection and must be properly protected or completely separated. 2. There is piping that appears to support water service prior to water entering the finished water storage. The piping has an open valve and is prior to the injection point for disinfection. Provide some feedback about how water is being used from this segment of piping. There is some concern that the water being used is not a completed finished quality water product.
FACILITY	CATEGORY	FINDINGS
2019131-001 - WELL #1	Source	1. The wiring entering the casing seal creates a void. The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the casing seal to prevent bacteriological contamination. 2. The well's casing vent is not covered by a 24 mesh corrosion resistant screen. The well's casing vent must be covered by a 24 mesh corrosion resistant screen.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
2019131-001 - WELL #1	Source	There is currently no pressure gauge installed on the discharge piping of the well. A pressure gauge must be installed on the discharge piping upstream of the check valve as a means to measure the actual operating head conditions. Install a pressure gauge on the well discharge piping to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

PWS ID LA2019138  
CALCASIEU Parish

Dear Ms. Holifield:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 23, 2018 sanitary survey inspection of the public water supply system for CITGO PETROLEUM - CONTRACTOR COMP W S (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The drain to the hydropneumatic tank has a permanently attached wash down hose that does not have the benefit of an air gap or backflow prevention device. This current setup can allow for the introduction of water of questionable quality into the potable water tank. The hose bib and pipe may allow for a cross connection between potable water and the runoff around this area. The hose of this nature must be disconnected and connected only when needed or a backflow prevention devices must be installed on this pipe. An atmospheric vacuum breaker is the required device for this application.
FACILITY	CATEGORY	FINDINGS
2019015-007 - WELL #20 - CONTRACTOR COMP	Source	The conduit for the wiring into the well is cracked and deteriorating. The cracked conduit provides for the possible entrance of foreign substances, insects, or organisms that could lead to bacteriological contamination. Replace the cracked conduit to prevent bacteriological contamination.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
2019015-007 - WELL #20 - CONTRACTOR COMP	Source	The screening on the air release-vacuum relief valve is broken. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screen to prevent the entrance of contaminants.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The fire line actively tied to the water system must have a double check valve assembly. A double check valve assembly is defined as an assembly with 2 independently operating spring loaded check valves, with tightly closing shut off valves on each side of the check valves, plus properly located test cocks for the testing of each check valve. This is a testable device and must be tested upon inception and annually by a certified backflow tester. The fire line represents a cross-connection and must be properly protected or completely separated.

### Minor Deficiencies

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
2019147-001 - WELL #1	Source	The screening for the well's casing vent is broken. The well casing vent must be covered with a 24 mesh corrosion resistant screen. Replace the well casing vent screen to prevent the entrance of contaminants.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 5 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
2019147-001 - WELL #1	Source	A pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.

FACILITY	CATEGORY	FINDINGS
2019147-001 - WELL #1	Source	A segment of the air release-vacuum relief valve appears to be detached leaving the device exposed to the surroundings. Repair the air release-vacuum relief valve to protect against the potential entrance of contaminants. The air release-vacuum relief valve must be equipped with exhaust/relief piping terminating in a down-turned position at least 18 inches above floor level and covered with a 24 mesh corrosion resistant screen.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

Re: Class I Sanitary Survey  
FREDS LOUNGE WATER SYSTEM Public Water System  
PWS ID LA2019148  
CALCASIEU Parish

Dear Mr. Wannage:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 5, 2018 sanitary survey inspection of the public water supply system for FREDS LOUNGE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

**Name**

Solomon Angwafo

**Organization**

OPH-Region V Engineering

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The water system is not under the control and supervision of a duly certified operator. The water system, per population and system design at the time of the survey, must be placed under the supervision and control of a certified operator holding at least level 1 certifications in the categories of Water Production and Water Distribution. The operator certification office can be reached by phone at (225) 342-7508. The operator certification website is located on LDH's website using the following link: <a href="http://www.dhh.louisiana.gov/index.cfm/page/416">http://www.dhh.louisiana.gov/index.cfm/page/416</a>
FACILITY	CATEGORY	FINDINGS
Management	Security	There is no protective fencing around the water system facilities. A fence, capable of being locked, must be constructed around all aspects of the public water supply. The fence shall be resistant to climbing and at least 6 feet high.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The well discharge piping has a hose bib installed that does not have an atmospheric vacuum breaker attached to its end. An atmospheric vacuum breaker must be installed on the hose bib to protect against contamination. A hose having a control valve placed at the end and connected to the bib having the proper protection still voids this protection. A hose with or without a control valve, should always be removed and stored when not being used.
FACILITY	CATEGORY	FINDINGS
2019148-001 - WELL #1	Source	There is a void where the well casing meets the concrete slab. The void space needs to be filled to eliminate the entry of water of questionable quality and to prevent the possible contamination of the source.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 5 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
2019148-001 - WELL #1	Source	1) The well is equipped with a check valve that appears to be malfunctioning. The well must be equipped with a working check valve. 2) The well is not equipped with a means of measuring flow. A means of measuring flow must be provided.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V

Dear Responsible Party:

The Louisiana Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 14, 2018 RTCR Level 2 Assessment of the public water supply system for Westlake Discount Tobacco Water System. The intent of this assessment, in response to multiple positive total coliform samples in a running 12 month period, is to locate sanitary defects the could infer with the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code.

**Parties Present**

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Rashid Muhammad, Manager	Westlake Discount Tobacco Water System

The RTCR Level 2 Assessment form is enclosed with this letter. Please review the findings of the assessment report. The sanitary defects listed in the table, starting on page 4 of the RTCR Level 2 Assessment Form titled "Issue Descriptions and Corrective Actions" must be corrected and a written response submitted to the department within 30 days of the RTCR Level 2 Assessment trigger on August 13, 2018. The response is due on September, 13 2017. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these sanitary defects, then the written response must also contain a request with specific dates when the sanitary defects will be corrected.

**RTCR Level 2 Assessment Form**

**II. Assessment Questions**

**A. Source – Well**

*\*If PWS does not use a well source check here and skip to subsection B ☐*

<b>Which well sources were not used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Was a new source activated?		X		
2. Is the ground graded to prevent surface water flow towards the well?		X		
3. Does the well casing extend at least 18" above the ground?	X			
4. Is the exposed portion of the well casing in good condition?	X			
5. Does the well have a secured sanitary seal well cap?		X		
6. Is the sanitary seal well cap vented and screened?		X		
7. Is there a down turned well vent that is at least 24 inches above the ground surface?		X		
8. Are appropriate backflow prevention devices installed, maintained and tested on all cross connections?		X		
9. Does raw water quality data indicate changes to the source water quality?				X
10. Has source yield changed?				X
11. Are there obvious sources of contamination in the vicinity of the well?		X		
12. Was the well pump recently repaired or replaced?		X		
13. Are there signs of vandalism at the well?		X		
14. Have there been any unusual weather events that may have impacted the well?		X		
15. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the well?		X		
16. Is the well equipped with an approved sample tap?		X		

**Assessor Name: Steven R. Joubert, P.E.**

**B. Source – Surface Water**

*\*If PWS does not use a surface water source check here and skip to subsection C ☒*

<b>Which surface water sources were used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Is the surface water intake screened and maintained?				
2. Is the pump house protected from unauthorized personnel?				
3. Does raw water quality data indicate changes to the source water quality?				
4. Are there obvious sources of contamination within the nearby watershed?				
5. Are there signs of vandalism at the surface water intake?				
6. Have severe weather events such as heavy rainfall, rapid snowmelt, drought, or reservoir turnover occurred?				
7. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the source?				

**Assessor Name:**

**Louisiana Department of Health, Office of Public Health**  
**Engineering Services – Safe Drinking Water Program**  
**RTCR Level 2 Assessment Form**

**C. Treatment Processes**

Questions:	YES	NO	N/A	Unk.
1. Have there been interruptions in any treatment processes?			X	
2. Has the treatment plant(s) or finished water pump(s) experienced any power interruptions?			X	
3. Has there been any recent installation or repair of treatment equipment?			X	
4. Have there been changes to any treatment processes?			X	
5. Does water quality data indicate inadequate/inappropriate treatment of water?	X			
6. Are all treatment processes operational and maintained?			X	
7. Is there an air gap between treatment instrumentation and waste lines?			X	
8. Were there any failures to meet required CT values?			X	
9. Did treatment plant flow rates exceed the permitted capacity?				X
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?			X	
11. Did a review of the turbidity data reveal any anomalies?			X	
12. Did a review of chlorine residual data reveal any anomalies or deficiencies?			X	
13. Is primary (disinfection) treatment in place?		X		

**Assessor Name: Steven R. Joubert, P.E.**

**D. Distribution System**

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?		X		
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?		X		
3. If samples were collected from inside a building, does the site have additional water treatment installed?		X		
4. Is there evidence that the system experienced low or negative pressure?		X		
5. Was there any scheduled flushing of the distribution system?		X		
6. Are pump stations protected from unauthorized personnel?			X	
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?	X			
8. Are air relief valves maintained and operational without leaks?			X	
9. Are pump stations maintained and equipment operational?			X	
10. Are fire hydrants and blow offs maintained and operational without leaks?			X	
11. Does water quality data collected in the distribution system show results indicative of an issue?	X			
12. Have any water related customer complaints been received?		X		
13. Is there any evidence of intentional contamination in the distribution system?		X		
14. Are there any issues with sample taps supporting bacteriological monitoring?	X			

**Assessor Name: Steven R. Joubert, P.E.**

**Louisiana Department of Health, Office of Public Health**  
**Engineering Services – Safe Drinking Water Program**  
**RTCR Level 2 Assessment Form**

**E. Storage Tanks**

*\*If no storage tank check here and skip to section IV. X*

Questions:	YES	NO	N/A	Unk.
1. Is the pressure tank maintaining an appropriate minimum pressure?				
2. Are all vents and overflow pipes screened?				
3. Is the tank maintained and free of rust, holes and leaks?				
4. Are there any unsealed openings in the storage facility such as access doors, vents or joints?				
5. Are signs of vandalism visible?				
6. Are roof hatches and manhole openings tightly covered and locked?				
7. Do downspouts and overflow pipes drain water away from structure?				
8. Have all storage tanks been inspected and cleaned within the last 5 years?				
9. Is there an effective water volume for disinfection?		X		

**Assessor Name: Steven R. Joubert, P.E.**

**III. Water Quality Data Table**

Parameter	Number of Each Sample Type Collected		
	Raw (1)	Entry Point (1)	Distribution (1)
Chlorine Residual (mg/L)	0.00	0.00	0.00
Turbidity (NTU)			
Coliform Bacteria			
Other (specify below)			

**IV. Issue Descriptions and Corrective Actions**

**(Use page 7 to report additional issues)**

*\* No issues were found during the assessment:* ☐

Issue Description (list section letter and #)	Corrective Action
A. 2. The well does not have a concrete cover slab.	The well shall have a concrete cover slab of at least 4 inches thick and extend at least 2.5 feet in all directions. Install a concrete cover slab.

**Louisiana Department of Health, Office of Public Health**  
**Engineering Services – Safe Drinking Water Program**  
**RTCR Level 2 Assessment Form**

<b>Issue Description (list section letter and #)</b>	<b>Corrective Action</b>
<b>A. 5.</b> The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. The wiring entering the casing seal creates a void.	Eliminate the voids in the casing seal, associated with the wiring, to prevent bacteriological contamination.

<b>Issue Description (list section letter and #)</b>	<b>Corrective Action</b>
<b>A. 6. &amp; A. 7.</b> The well is not equipped with a casing vent.	The well must be equipped with a downturned casing vent with appropriate non-corrodible 24 mesh screening, a minimum of height of 12 above grade or floor, and a minimum diameter of 1½ inch.

<b>Issue Description (list section letter and #)</b>	<b>Corrective Action</b>
<b>A. 8.</b> The well is not equipped with a check valve, a pressure gauge, and a means of measuring flow, located at a point where positive pressure is maintained.	A check valve, a pressure gauge, and a means of measuring flow must be provided.

<b>Issue Description (list section letter and #)</b>	<b>Corrective Action</b>
<b>A. 16.</b> The well is not equipped with an approved sample tap.	The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap.

# Louisiana Department of Health, Office of Public Health

## Engineering Services – Safe Drinking Water Program

### RTCR Level 2 Assessment Form

Issue Description (list section letter and #) C. 5. & C. 13	Corrective Action
The well sample collected and tested was positive for total coliform.	No direct action. See corrective action for D. 11.

Issue Description (list section letter and #) D. 11.	Corrective Action
The routine and repeat samples collected did not have the minimum free chlorine residual of 0.5 mg/L. The water system is currently not providing required disinfection.	Disinfection is mandatory and must be provided for all public water systems. A chemical feed pump with chemical tank must be installed to provide the required disinfection.

Issue Description (list section letter and #) D. 14.	Corrective Action
MRT-003 is not an approved smooth nosed sampling tap for bacteriological monitoring.	There needs to be an established smooth nosed sampling station at the building location to facilitate bacteriological monitoring.

Issue Description (list section letter and #) E. 9.	Corrective Action
There is no storage tank to allow for an adequate water volume for usage and disinfection.	Water storage must be provided to allow for an effective volume for usage and disinfection.

- Ordered by EPA due to failure to complete Level 1 Assessment triggered October 2016  
CAMERON EXPRESS WATER SYSTEM Public Water System  
PWS ID LA2019151  
CALCASIEU Parish

Dear Responsible Party:

The Louisiana Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 13, 2018 RTCR Level 2 Assessment of the public water supply system for Cameron Express Water System. The intent of this assessment, in response to the water system's failure to complete a Level 1 Assessment triggered in October 2016, is to locate sanitary defects the could infer with the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code.

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

<b>Comments:</b> Please provide a copy of the well records. This office is unsure if the required sanitary features, such as depth of grouting and grouting thickness, are provided and meet applicable standards.					

### **Sanitary Defects**

No observations were recorded in this category.

### **Deficiencies**

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Steven R. Joubert, P.E.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

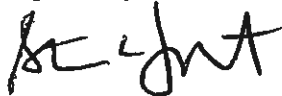

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

No violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3214.

Respectfully,

Steven R. Joubert, P.E.  
District Engineer

**III. Assessment Questions**

**A. Source – Well**

*\*If PWS does not use a well source check here and skip to subsection B ☐*

<b>Which well sources were not used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Was a new source activated?		<b>X</b>		
2. Is the ground graded to prevent surface water flow towards the well?	<b>X</b>			
3. Does the well casing extend at least 18" above the ground?	<b>X</b>			
4. Is the exposed portion of the well casing in good condition?	<b>X</b>			
5. Does the well have a secured sanitary seal well cap?	<b>X</b>			
6. Is the sanitary seal well cap vented and screened?	<b>X</b>			
7. Is there a down turned well vent that is at least 24 inches above the ground surface?	<b>X</b>			
8. Are appropriate backflow prevention devices installed, maintained and tested on all cross connections?	<b>X</b>			
9. Does raw water quality data indicate changes to the source water quality?		<b>X</b>		
10. Has source yield changed?		<b>X</b>		
11. Are there obvious sources of contamination in the vicinity of the well?		<b>X</b>		
12. Was the well pump recently repaired or replaced?		<b>X</b>		
13. Are there signs of vandalism at the well?		<b>X</b>		
14. Have there been any unusual weather events that may have impacted the well?		<b>X</b>		
15. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the well?		<b>X</b>		

**Assessor Name: Steven R. Joubert, P.E.**

**B. Source – Surface Water**

*\*If PWS does not use a surface water source check here and skip to subsection C **X***

<b>Which surface water sources were used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Is the surface water intake screened and maintained?				
2. Is the pump house protected from unauthorized personnel?				
3. Does raw water quality data indicate changes to the source water quality?				
4. Are there obvious sources of contamination within the nearby watershed?				
5. Are there signs of vandalism at the surface water intake?				
6. Have severe weather events such as heavy rainfall, rapid snowmelt, drought, or reservoir turnover occurred?				
7. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the source?				

**Louisiana Department of Health, Office of Public Health**  
**Engineering Services – Safe Drinking Water Program**  
**RTCR Level 2 Assessment Form**

**Assessor Name:**

**C. Treatment Processes**

Questions:	YES	NO	N/A	Unk.
1. Have there been interruptions in any treatment processes?		X		
2. Has the treatment plant(s) or finished water pump(s) experienced any power interruptions?		X		
3. Has there been any recent installation or repair of treatment equipment?		X		
4. Have there been changes to any treatment processes?		X		
5. Does water quality data indicate inadequate/inappropriate treatment of water?		X		
6. Are all treatment processes operational and maintained?	X			
7. Is there an air gap between treatment instrumentation and waste lines?		X		
8. Were there any failures to meet required CT values?		X		
9. Did treatment plant flow rates exceed the permitted capacity?		X		
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?			X	
11. Did a review of the turbidity data reveal any anomalies?			X	
12. Did a review of chlorine residual data reveal any anomalies or deficiencies?		X		

**Assessor Name: Steven R. Joubert, P.E.**

**D. Distribution System**

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?		X		
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?		X		
3. If samples were collected from inside a building, does the site have additional water treatment installed?		X		
4. Is there evidence that the system experienced low or negative pressure?		X		
5. Was there any scheduled flushing of the distribution system?		X		
6. Are pump stations protected from unauthorized personnel?	X			
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?	X			
8. Are air relief valves maintained and operational without leaks?			X	
9. Are pump stations maintained and equipment operational?			X	
10. Are fire hydrants and blow offs maintained and operational without leaks?	X			
11. Does water quality data collected in the distribution system show results indicative of an issue?		X		
12. Have any water related customer complaints been received?		X		
13. Is there any evidence of intentional contamination in the distribution system?		X

**Assessor Name: Steven R. Joubert, P.E.**

**E. Storage Tanks**

*\*If no storage tank check here and skip to section IV. ☐*

Questions:	YES	NO	N/A	Unk.
1. Is the pressure tank maintaining an appropriate minimum pressure?	X			
2. Are all vents and overflow pipes screened?			X	
3. Is the tank maintained and free of rust, holes and leaks?	X			
4. Are there any unsealed openings in the storage facility such as access doors, vents or joints?		X		
5. Are signs of vandalism visible?		X		
6. Are roof hatches and manhole openings tightly covered and locked?	X			
7. Do downspouts and overflow pipes drain water away from structure?			X	
8. Have all storage tanks been inspected and cleaned within the last 5 years?				X
9. Were there any repair activities associated with the storage tanks?		X		

**Assessor Name: Steven R. Joubert, P.E.**

THE BOARDING HOUSE WATER SYSTEM  
P.O. Box 6449  
Lake Charles, LA 70606

Re: Class I Sanitary Survey  
THE BOARDING HOUSE WATER SYSTEM Public Water System  
PWS ID LA2019153  
CALCASIEU Parish

Dear Ms. Tower:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 7, 2018 sanitary survey inspection of the public water supply system for THE BOARDING HOUSE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## Parties Present

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Rose Tower	Boarding House Water System

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The well discharge piping has a hose connected to it that does not have an atmospheric vacuum breaker installed on the hose bib. There is another unprotected hose bib connection at the well head. An atmospheric vacuum breaker must be installed on all hose bibs to protect against contamination. A control valve placed at the end of any hose voids the requested protection. The hose, with or without a control valve, should be removed and stored when not being used.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The chemical feed tank is not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

**Chlorine Residual Readings:**

All chlorine readings must be recorded as displayed on your colorimeter. The values are not to be rounded. If the reading flashes "2.2", then you must switch the device to the high range setting and follow the guidelines to retest the chlorine residual. When the device flashes in this way, it is a signal that the chlorine residual is higher than 2.2 ppm. An accurate recording is needed since there is a Maximum Disinfection Residual Limit, with is an excess of 4.0 ppm by taking an average of all recorded chlorine residuals over an annual period.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Steven R. Joubert, P.E.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

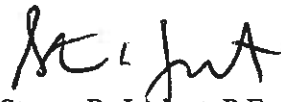

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3214.

Respectfully,

Steven R. Joubert, P.E.  
District Engineer

Re: Class I Sanitary Survey  
JAYS MELODY CLUB WATER SYSTEM Public Water System  
PWS ID LA2019155  
CALCASIEU Parish

Dear Mr. Ashworth:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 7, 2018 sanitary survey inspection of the public water supply system for JAYS MELODY CLUB WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### **Parties Present**

<b>Name</b>	<b>Organization</b>
Solomon Angwafo	OPH-Region V Engineering
Chad Perry	Ivery Enterprises, LLC

### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The well discharge piping has a hose bib installed that does not have an atmospheric vacuum breaker attached to its end. An atmospheric vacuum breaker must be installed on the hose bib to protect against contamination. A hose having a control valve placed at the end and connected to the bib having the proper protection still voids this protection. A hose with or without a control valve, should always be removed and stored when not being used.
FACILITY	CATEGORY	FINDINGS
2019155-001 - WELL #1	Source	The well is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve and shall terminate in a downward direction. The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap. A minimum clearance of 12 inches must be provided underneath the raw water sample tap.

### **Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual

		Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 5 office a copy of the next three (3) months of properly recorded, chlorine residual forms.

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
2019156-001 - WELL #1	Source	The wiring entering the casing seal creates a void. The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate any voids in the casing seal to prevent bacteriological contamination.

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The TCR tap at the building is a double sided connection with a hose bib. A sampling station must not share piping and space with other points of usage that could provide for negative influences and yield sampling results that may not be consistent with water quality. Configure the sampling station to support monitoring only without any undue influences.
FACILITY	CATEGORY	FINDINGS
2019156-001 - WELL #1	Source	1. The well is not equipped with a check valve. The discharge piping of the well shall be equipped with a check valve. 2. There is currently no pressure gauge installed on the discharge piping of the well. A pressure gauge must be installed on the discharge piping upstream of the check valve as a means to measure the actual operating head conditions. Install a pressure gauge on the well discharge piping to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
2019156-001 - WELL #1	Source	The well is not equipped with a casing vent. The well must be equipped with a downturned casing vent with appropriate non-corrodible, 24 mesh screening. It must be installed at a minimum height of 12 inches above the grade or floor and must have a minimum diameter of 1-1/2 inches.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to**

correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

#### **Chlorine Residual Readings:**

**All chlorine readings must be recorded as displayed on your colorimeter. The values are not to be rounded. If the reading flashes "2.2", then you must switch the device to the high range setting and follow the guidelines to retest the chlorine residual. When the device flashes in this way, it is a signal that the chlorine residual is higher than 2.2 ppm. An accurate recording is needed since there is a Maximum Disinfection Residual Limit, with is an excess of 4.0 ppm by taking an average of all recorded chlorine residuals over an annual period.**

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Steven R. Joubert, P.E.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

#### **Bacteriological Sampling History**

##### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

#### **Violation History**

##### **Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

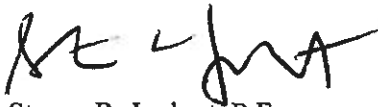

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3214.

Respectfully,

Steven R. Joubert, P.E.  
District Engineer

- Ordered by EPA due to failure to complete Level 1 Assessment triggered November 2017  
FAMILY DOLLAR 5483 WATER SYSTEM Public Water System  
PWS ID LA2019157  
CALCASIEU Parish

Dear Responsible Party:

The Louisiana Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 13, 2018 RTCR Level 2 Assessment of the public water supply system for Family Dollar 5483 Water System. The intent of this assessment, in response to the water system's failure to complete a Level 1 Assessment triggered in November 2017, is to locate sanitary defects the could infer with the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code.

## Parties Present

### **Name**

Steven R. Joubert  
Chad Perry

### **Organization**

OPH-Region V Engineering  
Ivery Enterprises, LLC

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
04/23/2018	04/24/2018	Formal Enforcement	Minor	M&R and Data Verification	Management
<p><b>Comments:</b> Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website at the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a>. Please send the Region 5 office a copy of the next three (3) months of properly recorded, chlorine residual forms.</p>					

### **Sanitary Defects**

No observations were recorded in this category.

### **Deficiencies**

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

**III. Assessment Questions**

**A. Source – Well**

*\*If PWS does not use a well source check here and skip to subsection B ☐*

<b>Which well sources were not used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Was a new source activated?		<b>X</b>		
2. Is the ground graded to prevent surface water flow towards the well?	<b>X</b>			
3. Does the well casing extend at least 18" above the ground?	<b>X</b>			
4. Is the exposed portion of the well casing in good condition?	<b>X</b>			
5. Does the well have a secured sanitary seal well cap?	<b>X</b>			
6. Is the sanitary seal well cap vented and screened?	<b>X</b>			
7. Is there a down turned well vent that is at least 24 inches above the ground surface?	<b>X</b>			
8. Are appropriate backflow prevention devices installed, maintained and tested on all cross connections?	<b>X</b>			
9. Does raw water quality data indicate changes to the source water quality?		<b>X</b>		
10. Has source yield changed?		<b>X</b>		
11. Are there obvious sources of contamination in the vicinity of the well?		<b>X</b>		
12. Was the well pump recently repaired or replaced?		<b>X</b>		
13. Are there signs of vandalism at the well?		<b>X</b>		
14. Have there been any unusual weather events that may have impacted the well?		<b>X</b>		
15. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the well?		<b>X</b>		

**Assessor Name: Steven R. Joubert, P.E.**

**B. Source – Surface Water**

*\*If PWS does not use a surface water source check here and skip to subsection C **X***

<b>Which surface water sources were used during the monitoring period?</b>	<b>YES</b>	<b>NO</b>	<b>N/A</b>	<b>Unk.</b>
<b>Questions:</b>				
1. Is the surface water intake screened and maintained?				
2. Is the pump house protected from unauthorized personnel?				
3. Does raw water quality data indicate changes to the source water quality?				
4. Are there obvious sources of contamination within the nearby watershed?				
5. Are there signs of vandalism at the surface water intake?				
6. Have severe weather events such as heavy rainfall, rapid snowmelt, drought, or reservoir turnover occurred?				
7. Have there been any sewer overflows or spills, chemical spills or other disturbances in the area of the source?				

# Louisiana Department of Health, Office of Public Health

## Engineering Services – Safe Drinking Water Program

### RTCR Level 2 Assessment Form

Assessor Name:

#### C. Treatment Processes

Questions:	YES	NO	N/A	Unk.
1. Have there been interruptions in any treatment processes?		X		
2. Has the treatment plant(s) or finished water pump(s) experienced any power interruptions?		X		
3. Has there been any recent installation or repair of treatment equipment?		X		
4. Have there been changes to any treatment processes?		X		
5. Does water quality data indicate inadequate/inappropriate treatment of water?		X		
6. Are all treatment processes operational and maintained?	X			
7. Is there an air gap between treatment instrumentation and waste lines?		X		
8. Were there any failures to meet required CT values?		X		
9. Did treatment plant flow rates exceed the permitted capacity?		X		
10. Is the PWS meeting all permit special conditions (alternative treatment technologies)?			X	
11. Did a review of the turbidity data reveal any anomalies?			X	
12. Did a review of chlorine residual data reveal any anomalies or deficiencies?		X		

Assessor Name: Steven R. Joubert, P.E.

#### D. Distribution System

Questions:	YES	NO	N/A	Unk.
1. Have line breaks and repairs, or large firefighting events occurred?		X		
2. If samples were collected from inside a building, has there been any recent plumbing work conducted at the site?		X		
3. If samples were collected from inside a building, does the site have additional water treatment installed?		X		
4. Is there evidence that the system experienced low or negative pressure?		X		
5. Was there any scheduled flushing of the distribution system?		X		
6. Are pump stations protected from unauthorized personnel?	X			
7. Are appropriate backflow prevention devices installed, maintained, and tested on all cross connections?	X			
8. Are air relief valves maintained and operational without leaks?			X	
9. Are pump stations maintained and equipment operational?			X	
10. Are fire hydrants and blow offs maintained and operational without leaks?	X			
11. Does water quality data collected in the distribution system show results indicative of an issue?		X		
12. Have any water related customer complaints been received?		X		
13. Is there any evidence of intentional contamination in the distribution system?		X

Assessor Name: Steven R. Joubert, P.E.

#### E. Storage Tanks

*\*If no storage tank check here and skip to section IV. ☐*

Questions:	YES	NO	N/A	Unk.
1. Is the pressure tank maintaining an appropriate minimum pressure?	X			
2. Are all vents and overflow pipes screened?			X	
3. Is the tank maintained and free of rust, holes and leaks?	X			
4. Are there any unsealed openings in the storage facility such as access doors, vents or joints?		X		
5. Are signs of vandalism visible?		X		
6. Are roof hatches and manhole openings tightly covered and locked?	X			
7. Do downspouts and overflow pipes drain water away from structure?			X	
8. Have all storage tanks been inspected and cleaned within the last 5 years?				X
9. Were there any repair activities associated with the storage tanks?		X		

Assessor Name: Steven R. Joubert, P.E.

#### IV. Water Quality Data Table

Parameter	Number of Each Sample Type Collected		
	Raw (0)	Entry Point (0)	Distribution (0)
Chlorine Residual (mg/L)			
Turbidity (NTU)			
Coliform Bacteria			
Other (specify below)

Re: Class I Sanitary Survey  
SMOKERS PARADISE #3 WATER SYSTEM Public Water System  
PWS ID LA2019161  
CALCASIEU Parish

Dear Mr. Islam:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 7, 2018 sanitary survey inspection of the public water supply system for SMOKERS PARADISE #3 WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Austin Booth	Booth Environmental Services

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	During the sanitary survey visit, it was noted that changes requiring a written approval from the state health officer were completed without authorization. A hydropneumatic tank was installed to replace an approved bladder tank. Replace the existing hydropneumatic tank with a bladder tank or provide engineering plan for review and approval confirming the installed tank will function without any adverse health effects.

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 5 office a copy of the next three (3) months of properly recorded, chlorine residual forms.

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The tap provided is not conducive to proper bacteriological sampling. The tap is installed inside in an area that makes it hard to flush a sufficient duration. The access to the tap is poor; it is located under a 3 compartment sink. The flexible hose also makes it difficult to properly fill a sample container. The sample tap needs to be modified to a fixed smooth nosed tap 12" above the ground or floor in a location that will facilitate proper flushing, when needed.
FACILITY	CATEGORY	FINDINGS
2019161-001 - WELL NO. 1	Source	A pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Steven R. Joubert, P.E.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

Violation Number	Violation Date	Analyte	Compliance Period
1	12/10/2018	REVISED TOTAL COLIFORM RULE (RTCR)	11/01/2018 - 11/30/2018

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3214.

Respectfully,

Steven R. Joubert, P.E.  
District Engineer

Re: Class I Sanitary Survey  
ENOS DERBONNE PARK WATER SYSTEM Public Water System  
PWS ID LA2019169  
CALCASIEU Parish

Dear Ms. Rist:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 19, 2018 sanitary survey inspection of the public water supply system for ENOS DERBONNE PARK WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
Steven R. Joubert	OPH-Region V Engineering

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The water system is not under the control and supervision of a duly certified operator. The water system, per population and system design at the time of the survey, must be placed under the supervision and control of a certified operator holding at least level one (1) certifications in the categories of Water Production and Water Distribution. The operator certification office can be reached by phone at (225) 342-7508. The operator certification website is: <a href="http://www.dhh.louisiana.gov/index.cfm/page/416">http://www.dhh.louisiana.gov/index.cfm/page/416</a>
FACILITY	CATEGORY	FINDINGS
Management	Other	The water system is currently not disinfecting the water being produced. Disinfection is mandatory and must be provided for all public water systems. The chemical solution tank and chemical injection pump must be connected, functioning properly and operable at all times to provide for continuous disinfection.
FACILITY	CATEGORY	FINDINGS
Management	Security	There is no protective fencing around the well. A fence, capable of being locked, must be constructed around all aspects of the public water supply. The fence shall be resistant to climbing and at least 6 feet high.
FACILITY	CATEGORY	FINDINGS
DS950 - DISTRIBUTION	Distribution System	There is a hose connected to the water system distribution system without the benefit of a backflow prevention protection. This current setup can allow for the introduction of water of questionable quality into the potable water system. The hose bib and pipe may allow for a cross connection between potable water and runoff around this area. An atmospheric vacuum breaker is the required protection device.
FACILITY	CATEGORY	FINDINGS
2019169-001 - WELL 1	Source	1) The well does not have a concrete cover slab. The well shall have a concrete cover slab of at least 4 inches thick and extend at least 2.5 feet in all directions. The casing for all ground water sources shall project at least 12 inches above the slab and at least 18 inches above the final ground surface. 2) The area around the well is excessively wet. The area around the well must be well-drained to facilitate the rapid removal of water within a 50' radius of the well. The ponding water presents a potential source of contamination.
FACILITY	CATEGORY	FINDINGS

2019169-001 - WELL 1	Source	The well is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve and shall terminate in a downward direction. The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap. A 12-inch clearance must be provided underneath the tap.
----------------------	--------	--

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	A total coliform monitoring plan has not been completed. A total coliform monitoring plan must be completed. The OPH Region 5 Engineering Services staff can be reached by phone @ 337-475-3232 in regards to a review and the approval of the monitoring plan. The water system can complete the required plan by logging into the Monitoring Plan Portal at: <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a> .
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site. A critical point (MRT), the location in the water system furthest from treatment, must also be monitored daily. An additional chlorine residual (ACR) check must be made monthly at the ACR site. These points will be established during the submittal and OPH approval of the Monitoring Plan for the system. A minimum free chlorine residual of 0.5mg/L is required at all time for these sample points during collection and testing. Upon completion of the Monitoring Plan for the public water system, please start measuring and recording the residuals at the locations described using a digital chlorine analyzer. Residuals must be recorded on the "LDH-Approved Chlorine Residual Forms", which can be found at: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a>
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Please provide a copy of the well records. This office is unsure if the required sanitary features, such as depth of grouting and grouting thickness, are provided and meet applicable standards.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The electrical wiring for the wells submersible pump is currently unprotected. All electrical work must conform to the National Electric Code Requirements. Provide conduit for the pumps electrical wiring with an adequate watertight connection at the entrance through the wells casing sanitary seal to eliminate possible contamination into the well.
FACILITY	CATEGORY	FINDINGS
DS950 - DISTRIBUTION	Distribution System	There is currently no smooth-nozzle tap in the distribution system for sample collection. A suitable MRT sample tap must be provided in the distribution system for total coliform monitoring. To facilitate proper sample collection, there must be at least 12 inches of clearance below the nozzle of the tap. This minimum clearance includes the distance above grass and/or weeds. Contact the OPH Region 5 Engineering Services staff for assistance with developing a monitoring plan to include an MRT sampling point for total coliform monitoring for the public water system.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC TANK	Finished Water Storage	The water sight glass for the hydropneumatic tank is missing. A water sight glass must be provided on the hydropneumatic tank. Install a water sight glass on the hydropneumatic tank to provide for a means of measuring the contents being stored in the tank.
FACILITY	CATEGORY	FINDINGS
2019169-001 - WELL 1	Source	The well is not equipped a pressure gauge and a means of measuring flow. A pressure gauge and a means of measuring flow must be provided.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

**The water system does not have a dedicated point of entry sample tap. Create a designated point of entry sampling location with a smooth nosed tap at a location under pressure. The tap must be located after all treatment and prior to the first customer.**

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Solomon Angwafo, E.I.

CAMERON Parish

Dear Mr. Petersen:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 9, 2018 sanitary survey inspection of the public water supply system for CAMERON PARISH WATER AND WW DISTRICT 1 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Solomon Angwafo	OPH-Region V Engineering
Joey Dockins	Cameron Parish Water And Wastewater Dist 1

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
1023001-009 - WELL #3 - OFFICE	Source	The point of entry sample tap is connected to a tee style fitting with another tap and hose for washdown installed. The point of entry sample tap must be smooth nosed and supportive of sampling measures only. The tap with washdown hose must be eliminated.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The overflow pipe for the ground storage tank is completely clogged with debris. Free the debris from the pipe to facilitate proper discharge of the overflow volume and check the integrity of the screen to make sure there are no holes or weakness that could allow the possibility of contamination.
FACILITY	CATEGORY	FINDINGS
1023001-009 - WELL #3 - OFFICE	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1023001-004 - WELL #4 - TINCE MURPHY	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1023001-001 - WELL #1 - ELEVATED TANK	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP003 - TP FOR WELL #4 - TINCE MURPHY	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized. The water system currently uses automatic switch over between 2 - 150 lb. gas cylinders to guarantee continuous disinfection.
FACILITY	CATEGORY	FINDINGS
TP005 - TP FOR WELL #3 - OFFICE	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized. The water system currently uses automatic switch over between 2 - 150 lb. gas cylinders to guarantee continuous disinfection.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1 - ELEVATED TANK	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized. The water system currently uses automatic switch over between 2 - 150 lb. gas cylinders to guarantee continuous disinfection.
FACILITY	CATEGORY	FINDINGS
TP004 - TP FOR WELL #5 - TOWN & COUNTRY	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized. The water system currently uses automatic switch over between 2 - 150 lb. gas cylinders to guarantee continuous disinfection.
FACILITY	CATEGORY	FINDINGS
TP003 - TP FOR WELL #4 - TINCE MURPHY	Treatment	The point of entry sample tap is not a smooth nosed sample tap. The point of entry tap must be smooth nosed, which is suitable for obtaining samples for bacteriological and chemical analysis.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
CAMERON PARISH WW DISTRICT 11-SWEET LAKE Public Water System  
PWS ID LA1023011  
CAMERON Parish

Dear Mr. Hebert:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 9, 2018 sanitary survey inspection of the public water supply system for CAMERON PARISH WW DISTRICT 11-SWEET LAKE (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
Steven R. Joubert	OPH-Region V Engineering
Craig Duhon	Cameron Parish WW District No 11

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
GR002 - AIRPORT	Finished Water Storage	The tank has a welded seam close to the overflow pipe that appears to be cracked at the top of the ground storage tank. The location also has some flaky paint. This area on the storage tank must be repaired to prevent the possible entrance of birds, insects, dust or other contaminating material.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
GR001 - OFFICE	Finished Water Storage	The level gauge for the office ground storage tank is broken. The level gauge shall be repaired and brought back to working order, unless the water system implements another way of monitoring the water level in this tank.
FACILITY	CATEGORY	FINDINGS
GR002 - AIRPORT	Finished Water Storage	The area around the storage tank is excessively wet. This area must be well drained to facilitate the rapid removal of water within a 50' radius of the storage tank. The ponding water presents a potential source of contamination and could potentially compromise the integrity of the structure.
FACILITY	CATEGORY	FINDINGS
TP002 - TP FOR WELL #1 - OFFICE	Treatment	The chlorine gas room must have separate switches for the fan and light installed outside of the chlorine room. Currently, there is no lighting provided for the chlorine room. Install separate switches outside of the chlorine room to control the lighting and ventilating fan. The chlorine room must be equipped with a working light.
FACILITY	CATEGORY	FINDINGS
TP004 - TP FOR WELL #2 - BALL PARK	Treatment	The ventilating fan is currently not operational. Either the fan is broken or there is an electrical issue. The chlorine room must be equipped with a working ventilating fan.
FACILITY	CATEGORY	FINDINGS
1023011-005 - WELL #5 - AIRPORT	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

FACILITY	CATEGORY	FINDINGS
1023011-004 - WELL #2 - BALLPARK	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP002 - TP FOR WELL #1 - OFFICE	Treatment	As discussed during the sanitary survey, the water system is required to install a new point of entry (POE) sample station after all treatment (chemical addition) and storage facilities, prior to the distribution system and the first customer. The point of entry tap must be of the smooth nosed type, suitable for obtaining samples for bacteriological and chemical analysis. The location, as agreed during the survey visit, should be at the fence line, north of the office ground storage tank on the combined header main leading to the distribution system.
TP004 - TP FOR WELL #2 - BALL PARK		
FACILITY	CATEGORY	FINDINGS
TP002 - TP FOR WELL #1 - OFFICE	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized. The water system currently uses automatic switch over between 2 - 150 lb. gas cylinders to guarantee continuous disinfection.
TP003 - TP FOR WELL #5 - AIRPORT		
TP004 - TP FOR WELL #2 - BALL PARK		

**Written Response Required**

Re: Class I Sanitary Survey  
CAMERON PARISH WW DISTRICT 9 Public Water System  
PWS ID LA1023012  
CAMERON Parish

Dear Mr. Warmer:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the September 13, 2018 sanitary survey inspection of the public water supply system for CAMERON PARISH WW DISTRICT 9 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

**Name**  
Solomon Angwafo  
Trey Picou

**Organization**

Cameron Parish WWD #9

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

**No observations were recorded in this category.**

**Deficiencies**

**No observations were recorded in this category.**

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 - TP FOR WELL #1 TP002 - TP FOR WELL #5 TP003 - TP FOR WELL #6 TP004 - TP FOR WELL #4	Treatment	The Chlorine room is not equipped with the shatter resistant inspection window. A shatter resistant inspection window is needed when chlorine gas is used.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 - TP FOR WELL #1 TP002 - TP FOR WELL #5 TP003 - TP FOR WELL #6 TP004 - TP FOR WELL #4	Treatment	Chlorine gas is being used at this location. Weighing scales are useful appurtenances when chlorine gas is being used.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### **Significant Deficiencies**

No observations were recorded in this category.

### **Minor Deficiencies**

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #3, #4	Treatment	The point of entry (POE) sample tap is connected to a tee style fitting with another tap installed for washdown activities. The POE sample tap is also not a smooth nosed sample tap. The tap must be of the smooth nosed type, suitable for obtaining samples for bacteriological and chemical analysis. The tap for washdown activities must be eliminated.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

#### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	The Harrisonburg fencing was not locked at two locations of the main plant ground storage yard; there is ground clearance at the rear of the tank yard which would allow for crawl access into the facility. The water system shall redress the fencing so that it is resistant to access and locked at all times. See <b>Attachment #3 and #2</b>
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC TANK	Finished Water Storage	There is extensive vegetation overgrowth around the hydropneumatic tank. The water system shall maintain surroundings in and around facilities to protect from vegetation and trees which could fall, scrape and damage storage and distribution equipment. See <b>Attachment #15 and #16</b>
FACILITY	CATEGORY	FINDINGS
GR003 - GROUND 1 NORTH	Finished Water Storage	Tree limbs are hanging over and touching ground #1 north storage tank. The water system shall remove all vegetation which extends over the fence and touches equipment to eliminate potential sources of damage and pathways of contamination. See <b>Attachment #23 and #24</b>
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND 3 SOUTH	Finished Water Storage	Tree limbs extend over the fence and touch the ground #3 south storage tank. The water system shall remove all vegetation which extends over the fence to eliminate potential sources of damage and pathways of contamination. See <b>Attachment #25</b>
FACILITY	CATEGORY	FINDINGS
1025004-003 - WELL 3 NORTH	Source	Signs of erosion are evident underneath and around the perimeter of Well# 3 North. Site grading shall be maintained to correct and prevent erosion and eliminate pathways for well contamination. See <b>Attachment #4, #6, #12 and #5</b>
FACILITY	CATEGORY	FINDINGS
1025004-004 - WELL 4 SOUTH	Source	Signs of erosion are evident underneath and around the perimeter of Well# 4 South. Site grading shall be maintained to correct and prevent erosion and eliminate pathways for well contamination. See <b>Attachment #11, #10, #9, #8 and #7</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	2017 and 2018 Chlorine Residual Report forms are not maintained. The water system shall measure and record the residual disinfectant every day for the POE and MRT; monthly measurement and recording of the ACR shall be completed; these records shall be retained for a minimum of 10 years.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Disinfection Byproduct (TTHM & HAA5) records not maintained for 2014, 2015 and 2017; The water system shall retain these records shall be retained for a minimum of 5 years.
FACILITY	CATEGORY	FINDINGS

Management	M&R and Data Verification	Village of Harrisonburg has not validated the colorimeter and has no standards kits for doing so. The water system shall obtain appropriate validation standards, measure and record validation checks at no more than 90-day intervals and retain these records. <b>See Attachment #1</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR001 - GROUND 3 SOUTH	Finished Water Storage	Considerable erosion is evident around the base of the ground storage tank. The water system should grade the area to close gaps between earth and tank foundation to prevent further erosion and eliminate potential for structural damage.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL001 - ELEVATED	Finished Water Storage	Elevated storage tank is showing signs of rust, corrosion at center of support base and on piping at splash pad. The tank must be cleaned, repaired and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.  Sample tap piping is severely corroded and should be replaced.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR002 - GROUND 2 MIDDLE	Finished Water Storage	Erosion is evident around the base of the ground storage middle #2 tank. The water system should grade the area to close gaps between earth and tank foundation and splash pads to prevent further erosion and eliminate potential for structural damage.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR003 - GROUND 1 NORTH	Finished Water Storage	Ground storage north tank# 1 is showing signs of corrosion. The tank must be cleaned, repaired and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR001 - GROUND 3 SOUTH	Finished Water Storage	Ground storage south tank# 3 is showing signs of corrosion. The tank must be cleaned, repaired and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
HD001 - HYDROPNEUMATIC TANK	Finished Water Storage	The hydropneumatic tank is showing signs of rust, corrosion and flaking paint. The tank must be cleaned, repaired and painted to resist further corrosion and deterioration that could lead to a potential source of contamination. <b>See Attachment #19, #18 and #20</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR001 - GROUND 3 SOUTH	Finished Water Storage	The overflow pipe is not properly screened. The overflow pipe must be screened with a 4 mesh non-corrodible screen and installed to provide protection at all times.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR002 - GROUND 2 MIDDLE	Finished Water Storage	The overflow pipe is not properly screened. The overflow pipe must be screened with a 4 mesh non-corrodible screen and installed to provide protection at all times.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR002 - GROUND 2	Finished	The well vent screen on cover appears to be greater than #4

MIDDLE	Water Storage	mesh. The vent must be screened with a #4 mesh non-corrodible stainless steel screen mesh and installed to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC TANK	Finished Water Storage	There is no pressure relief device present on the hydropneumatic tank. The water system should install, set and maintain operation of a PRV to prevent overpressuring and damage to the hydropneumatic tank and distribution system. <b>See Attachment #17</b>
FACILITY	CATEGORY	FINDINGS
TP003 - DISINFECTION WELL 3	Treatment	No fresh air inlet available. Water system should install a fresh air inlet to operate in concert with exhaust fans in storage buildings where chlorine gas is used.
FACILITY	CATEGORY	FINDINGS
1025004-004 - WELL 4 SOUTH	Source	The well vent screen was torn. The well vent must be replaced and covered by a 24 mesh corrosion resistant screen. <b>See Attachment #21</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There are signs of corrosion on water system distribution piping and appurtenances from the 3 ground storage tanks and hydropneumatic tank. The water system is recommended to clean and treat the piping to prevent and eliminate further corrosion. <b>See Attachment #26, #28 and #27</b>
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND 3 SOUTH	Finished Water Storage	The ladder ground tank #3 is not secured. A ladder with safety enclosure that can be locked should be provided or the bottom section of the ladder should be removed.
FACILITY	CATEGORY	FINDINGS
GR003 -	Finished	The ladder ground tank #1 is not secured. A ladder with safety

GROUND 1 NORTH	Water Storage	enclosure that can be locked should be provided or the bottom section of the ladder should be removed.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR002 - GROUND 2 MIDDLE	Finished Water Storage	There ladder at ground tank #2 is not secured. A ladder with safety enclosure that can be locked should be provided or the bottom section of the ladder should be removed.

Re: Class I Sanitary Survey  
TOWN of JONESVILLE WATER SYSTEM Public Water System  
PWS ID LA1025006  
CATAHOULA Parish

Dear Mayor Evans:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 5, 2018 sanitary survey inspection of the public water supply system for TOWN of JONESVILLE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Mike McGuffee	JCP Management Inc
Gregg Stout	LDH OPH District 4 Engineering

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
10/29/2015	11/19/2015	Sanitary Survey, Finished	Minor	Finished Water Storage	EL001-ELEVATED DIVISION STREET
Comments: The elevated storage tank needs to have a splash pad.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system did not have a cross connection control program in place. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods. A cross connection control program must be developed and implemented.
FACILITY	CATEGORY	FINDINGS
1025006-004 - DAVIS WELL NEW	Source	The well casing was showing signs of corrosion. The casing must be cleaned and painted to prevent further deterioration of the metal.
FACILITY	CATEGORY	FINDINGS
1025006-006 - SCOTT WELL 2	Source	The well casing was showing signs of corrosion. The casing must be cleaned and painted to prevent further deterioration of the metal.
FACILITY	CATEGORY	FINDINGS
1025006-003 - WELL SCOTT	Source	The well is not longer in use. It must be properly plugged and abandoned.

**Deficiencies**

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

All storage tanks should be cleaned, inspected, repaired, and if needed painted on a 3-5 year schedule. The Town should review the last cleaning of storage tanks and create a 3-5 year schedule for inspection.

ACT No. 292 became effective 08/01/2018 and provides requirements for community water systems with respect to customer complaints and flushing programs. It can be viewed at <http://www.legis.la.gov/legis/ViewDocument.aspx?d=1099847>.

In accordance with the provisions found in ACT No. 292, PWS shall maintain a record of each complaint it receives by telephone, letter, or electronic mail from customers or users. The record of each complaint shall include the date the complaint was received, the service connection to which the complaint relates, the name of the customer or user making the complaint and associated contact information, and a brief description of the complaint. The log containing the record shall also include documentation of corrective actions that PWS has implemented with respect to the matters detailed in the complaint. PWS shall retain the complaint records for at least five years, and shall make the records available to the Louisiana Department of Health upon request and without charge.

In accordance with the provisions found in ACT No. 292, PWS is here-by notified that PWS is required to implement a demonstrated flushing program. A properly designed and implemented flushing program is considered to be a valuable tool to significantly improve water quality and increase the reliability of the water distribution system. The flushing program must be documented and periodically evaluated for effectiveness. Of the various types of flushing programs that can be implemented, a unidirectional flushing (UDF) program is preferred where system design allows. UDF is the strategic closing of valves and opening of hydrants to flush one segment of main in a SINGLE DIRECTION (UDF). Higher velocities (> 5 fps is desirable) scour and remove sediment and deposits from water mains.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII  
Attn: Danny Mortimer, R. S.

Re: Class I Sanitary Survey  
VILLAGE of SICILY ISLAND WATER SYSTEM Public Water System  
PWS ID LA1025009  
CATAHOULA Parish

Dear Mr. Krause:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 29, 2018 sanitary survey inspection of the public water supply system for VILLAGE of SICILY ISLAND WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Henri J. Hammond	LDH Region VI Engineering
Clyde Irvin	Village of Sicily Island
Salley Berry	Village of Sicily Island
Ray Touchstone	Village of Sicily Island
Phil Marcotte	Village of Sicily Island

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

Visit Date	Notify Date	Reason	Severity	Category	Facility
08/18/2015	09/10/2015	Sanitary Survey, Finished	Significant	Source	1025009-001-WELL #1 - 6BBK
<b>Comments:</b> The old water wells need to be plugged and abandoned to properly protect the ground water.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
08/18/2015	09/10/2015	Sanitary Survey, Finished	Significant	Source	1025009-002-Z WEST WELL
<b>Comments:</b> The old water wells need to be plugged and abandoned to properly protect the ground water.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
08/18/2015	09/10/2015	Sanitary Survey, Finished	Minor	Distribution System	DS0950-DISTRIBUTION SYSTEM
<b>Comments:</b> The water supply must provide suitable taps which draw water directly from the mains or the service lines. The water system does not have a sampling station with smooth-nosed faucet for the point of entry (POE). A sample station for the POE needs to be installed.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
08/16/2012	08/16/2012	Sanitary Survey, Finished	Significant	Source	1025009-004-WELL #4 - 6DJU
<b>Comments:</b> The water well needs to have a working pressure gauge installed.					

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	The water system must cut back the tall trees around the well yard to prevent damage to the infrastructure and fence.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The system has a cross connection control plan, but has not implemented. The system must implement the cross

		connection control plan.
FACILITY	CATEGORY	FINDINGS
1025009-004 - WELL #4 - 6DJU	Source	The slab needs to be extended to prevent further erosion around the well.
FACILITY	CATEGORY	FINDINGS
1025009-001 - WELL #1 - 6BBK	Source	The splash pad needs to be extended to prevent further erosion or washout.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The elevated tank is starting to show signs of corrosion. The tank must be cleaned, inspected, repaired, and painted.
FACILITY	CATEGORY	FINDINGS
1025009-004 - WELL #4 - 6DJU	Source	The vent must extend at least 12" above the casing and 24" above the well slab.
FACILITY	CATEGORY	FINDINGS
1025009-001 - WELL #1 - 6BBK	Source	The vent screen must be replaced.
FACILITY	CATEGORY	FINDINGS
1025009-004 - WELL #4 - 6DJU	Source	The well discharge piping was corroded. The piping must be cleaned and painted.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP003 - DISINFECTION WELL 3 & 4	Treatment	The light bulbs for the chlorine room were inoperable and need to be replaced. The door handles need to be replaced.

Todd Chiasson	Norton Shop Water System

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system did not have a formal cross connection control program. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods. The water system must develop and implement a cross connection control program.
FACILITY	CATEGORY	FINDINGS
1027010-002 - WELL #2, TINSLEY WELL	Source	Well No. 2 is out of service and will no longer be utilized by the water system. The well must be properly plugged and abandoned.

**Deficiencies**

**No observations were recorded in this category.**

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

All storage tanks should be cleaned, inspected, repaired, and if needed painted on a 3-5 year schedule. The Town should review the last cleaning of storage tanks and create a 3-5 year schedule for inspection.

ACT No. 292 became effective 08/01/2018 and provides requirements for community water systems with respect to customer complaints and flushing programs. It can be viewed at <http://www.legis.la.gov/legis/ViewDocument.aspx?d=1099847>.

In accordance with the provisions found in ACT No. 292, PWS shall maintain a record of each complaint it receives by telephone, letter, or electronic mail from customers or users. The record of each complaint shall include the date the complaint was received, the service connection to which the complaint relates, the name of the customer or user making the complaint and associated contact information, and a brief description of the complaint. The log containing the record shall also include documentation of corrective actions that PWS has implemented with respect to the matters detailed in the complaint. PWS shall retain the complaint records for at least five years, and shall make the records available to the Louisiana Department of Health upon request and without charge.

In accordance with the provisions found in ACT No. 292, PWS is here-by notified that PWS is required to implement a demonstrated flushing program. A properly designed and implemented flushing program is considered to be a valuable tool to significantly improve water quality and increase the reliability of the water distribution system. The flushing program must be documented and periodically evaluated for effectiveness. Of the various types of flushing programs that can be implemented, a unidirectional flushing (UDF) program is preferred where system design allows. UDF is the strategic closing of valves and opening of hydrants to flush one segment of main in a SINGLE DIRECTION (UDF). Higher velocities (> 5 fps is desirable) scour and remove sediment and deposits from water mains.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the site visit, only 1 high service pump was operable. The high service pumps are critical infrastructure in providing water from the ground storage tank to the elevated tank and then ultimately to the distribution system. In the event of

		failure of the only operable pump, the Town may experience a water outage. It is imperative the second pump be repaired or replaced in order to maintain water service to the distribution system.
FACILITY	CATEGORY	FINDINGS
Management	Other	Due to the significantly reduced flow from the water wells, production is not high enough to allow for a productive flushing in the distribution system. The system must refurbish the water wells, replace the inoperable high service pump, and implement a flushing program.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system is unable to isolate individual sections of water distribution areas to contain and repair leaks. When the system experiences a leak, the entire distribution system has been shut off. This causes a systemwide pressure drop below the minimum required pressure of 20 psi. It also causes a significant upset in the distribution system which results in highly colored water entering service lines. The water system must locate all valves, determine if there is a sufficient number, and if not, submit a plan to provide a sufficient number to properly operate the distribution system. Upon approval of plans and specifications, the water system must implement the plan.
FACILITY	CATEGORY	FINDINGS
1029002-001 - WELL 1 USGS C0 32	Source	Well No. 1 and 2 were experiencing significantly reduced flow. Both wells together pump 170 gpm. Well No. 1 produces only 30 gpm. Well No. 2 produces approximately 140 gpm. The wells must be refurbished. It has been stated by system personnel that the wells need an acid wash and possible pump replacement in order to return them to proper production.

#### Minor Deficiencies

No observations were recorded in this category.

The deficiencies listed in the above table titled "**NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS**" must be corrected and a written response submitted to the department within 60 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies/violations must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the DHH-OPH Enforcement Units. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided by the Public Water System to the Surveying Office within 60 days of receipt of this letter with details regarding your corrective actions and any time extensions you may propose or you will be cited with a Treatment Technique violation which requires you to notify your consumers of the violation incurred.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDHH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

DHH/OPH Engineering Services – Northwest Regional Office  
Attn: Autumn Permenter, P.E.  
1525 Fairfield Ave Rm 569  
Shreveport, Louisiana 71101

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3231.

Respectfully,

## Department of Health

### Office of Public Health

CERTIFIED MAIL: 7018 1830 0000 9275 1512

December 13, 2018

Mr. William Coleman, President  
LAKE ST JOHN WATERWORKS DISTRICT 1  
1185 Hwy 569  
Ferriday, LA 71334

Re: Class I Sanitary Survey  
LAKE ST JOHN WATERWORKS DISTRICT 1 Public Water System  
PWS ID LA1029006  
CONCORDIA Parish

Dear Mr. Coleman:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 6, 2018 sanitary survey inspection of the public water supply system for LAKE ST JOHN WATERWORKS DISTRICT 1 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

#### **Name**

Joe Darrell Lewis  
Gregg Stout

#### **Organization**

Lake St John Waterworks Dist 1  
LDH OPH District 4 Engineering

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

The water system remains under an Administrative Order due to failure to comply with requirements of the Disinfection By Products Rule. The water system must continue to work towards corrective action of these violations.

### **Significant Deficiencies**

No observations were recorded in this category.

### **Deficiencies**

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

All storage tanks should be cleaned, inspected, repaired, and if needed painted on a 3-5 year schedule. The Town should review the last cleaning of storage tanks and create a 3-5 year schedule for inspection.

ACT No. 292 became effective 08/01/2018 and provides requirements for community water systems with respect to customer complaints and flushing programs. It can be viewed at <http://www.legis.la.gov/legis/ViewDocument.aspx?d=1099847>.

In accordance with the provisions found in ACT No. 292, PWS shall maintain a record of each complaint it receives by telephone, letter, or electronic mail from customers or users. The record of each complaint shall include the date the complaint was received, the service connection to which the complaint relates, the name of the customer or user making the complaint and associated contact information, and a brief description of the complaint. The log containing the record shall also include documentation of corrective actions that PWS has implemented with

respect to the matters detailed in the complaint. PWS shall retain the complaint records for at least five years, and shall make the records available to the Louisiana Department of Health upon request and without charge.

In accordance with the provisions found in ACT No. 292, PWS is here-by notified that PWS is required to implement a demonstrated flushing program. A properly designed and implemented flushing program is considered to be a valuable tool to significantly improve water quality and increase the reliability of the water distribution system. The flushing program must be documented and periodically evaluated for effectiveness. Of the various types of flushing programs that can be implemented, a unidirectional flushing (UDF) program is preferred where system design allows. UDF is the strategic closing of valves and opening of hydrants to flush one segment of main in a SINGLE DIRECTION (UDF). Higher velocities (> 5 fps is desirable) scour and remove sediment and deposits from water mains.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

James Soileau  
K. E. "Ed" Campbell

**Organization**

LDH-OPH Region 7  
Grand Cane Water System

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control plan was available. The water system must create and implement a cross connection control plan. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
1031006-001 - WELL #1	Source	The discharge piping shall be protected against the entrance of contamination.  The discharge pipe showed signs of corrosion. The discharge pipe must be cleaned and repainted to prevent further deterioration of the metal.
FACILITY	CATEGORY	FINDINGS
1031006-002 - WELL #2	Source	The discharge piping shall be protected against the entrance of contamination.  The discharge pipe showed signs of corrosion. The discharge pipe must be cleaned and repainted to prevent further deterioration of the metal.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - MAIN PLANT ADDIE AT 6TH ST	Treatment	The chlorination building did not have a light in it at the time of inspection. Proper lighting will be provided in the chlorination building.

ELEVATED TANK	Storage	repaired, and painted on a 3-5 year cycle. Please notify this office of the last date of cleaning and inspection along with the next anticipated date of cleaning and inspection.
FACILITY	CATEGORY	FINDINGS
HD001 - HD TANK	Finished Water Storage	All storage tanks must be cleaned, inspected, and if needed, repaired, and painted on a 3-5 year cycle. Please notify this office of the last date of cleaning and inspection along with the next anticipated date of cleaning and inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - GST #2, LP	Finished Water Storage	All storage tanks must be cleaned, inspected, and if needed, repaired, and painted on a 3-5 year cycle. Please notify this office of the last date of cleaning and inspection along with the next anticipated date of cleaning and inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - GST #2, LP	Finished Water Storage	The overflow was not screened at the time of the inspection. The overflow must be screened.
FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	At the time of the inspection, soda ash was stored in the chlorine room. Chemicals that are not compatible must not be stored together. Therefore, the soda ash stored in the chlorine room must be relocated. In addition, the ceiling of the chlorine room has an opening into the chemical room on the second floor. Because those chemicals are dry chemicals that create dust, the water system must limit the contact that can occur between the two rooms.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	The current chlorine room is open to the plant at all times. The water system should install a door to seal the chlorine room of from the reminder of the plant. The exhaust fan was unoperational. The exhaust fan must be repaired.

FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	The empty chlorine cylinders stored outside must be chained and stored out of direct sunlight or excessive heat exposure.

**Written Response Required**

Re: Class 2 Follow-Up Sanitary Survey Site Visit  
Mansfield Water System  
PWS ID LA1031009  
Desoto Parish

Dear Mayor Mayweather, Sr.:

The Department of Health and Hospitals would like to thank you and the site visit participants for the courtesy and assistance provided during the November 20, 2018 Follow-Up Sanitary Survey inspection of the public water supply Mansfield Water System. These inspections are part of our program to ensure compliance with the EPA Code of Federal Regulations Title 40 Parts 141-142 and Title 51 of the Louisiana Administrative Code.

This letter provides a summary of items noted in previous sanitary surveys in addition to during this follow-up sanitary survey. If significant deficiencies have been listed on the subsequent pages you are required to correct the deficiencies and provide written documentation of your corrective actions including the date(s) resolved. You may also request additional time beyond the 60 days in writing by providing a detailed plan of corrective action that includes proposed completion dates. Failure to respond to this letter in writing within 60 days of receipt may result in Enforcement Action.

Re: Class I Sanitary Survey  
Rambin-Wallace Water System Public Water System  
PWS ID LA1031012  
Desoto Parish

Dear Mr. Garlington:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 9, 2018 sanitary survey inspection of the public water supply system for Rambin-Wallace Water System (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

**Name**

James Soileau  
Bruce Garlington

**Organization**

LDH-OPH Region 7  
Rambin-Wallace Water System

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a) (4)(GWR) and 141.723(b) (SWTR).

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	There was no overflow piping on the left Wallace ground storage tank (GST #4). An overflow pipe shall be added. All water storage structures shall be provided with an overflow

		which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system does not have a formal cross connection control program in place. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
GR003 - GST #3, PELICAN (BACK)	Finished Water Storage	The level gauge was no longer in use, and was not sealed after abandonment. The hole where the wire used to be shall be sealed or screened to prevent contamination. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. Openings or vents shall face downward and shall be not less than 2 feet above the floor of a pump room, the roof or cover of a tank, the ground surface or the surface of other water supply structures.
FACILITY	CATEGORY	FINDINGS
1031012-003 - WELL #3, PELICAN (MAIN)	Source	There was a hole in the well casing seal. This hole shall be repaired or sealed to prevent a pathway for contamination. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1031012-004 - WELL #4, PELICAN (REMOTE)	Source	There were holes in the electrical box. These holes shall be sealed to prevent a pathway for contamination. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
GR001 - GST #1, HIGHWAYS 175 & 483	Finished Water Storage	A splash pad was not provided. A splash pad shall be added to prevent erosion. All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground

		surface, and discharges over a drainage inlet structure or a splash plate.
FACILITY	CATEGORY	FINDINGS
GR005 - GST #5, WALLACE (RIGHT TANK)	Finished Water Storage	A splash pad was not provided. A splash pad shall be added to prevent erosion. All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.
FACILITY	CATEGORY	FINDINGS
GR002 - GST #2, PELICAN (FRONT)	Finished Water Storage	A splash pad was not provided. A splash pad shall be added to prevent erosion. All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.
FACILITY	CATEGORY	FINDINGS
TP002 - PELICAN PLANT HWY 175	Treatment	The fan was not in working order at the time of the inspection. The exhaust fan must be returned to working order. Where chlorine gas is used, the room shall be constructed to provide the following: each room shall have a ventilating fan with capacity which provides one complete air change per minute when the room is occupied.
FACILITY	CATEGORY	FINDINGS
1031012-001 - WELL #1, WALLACE (PLANT)	Source	There was no working pressure gauge at the time of the inspection. The pressure gauge must be replaced. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

## Department of Health Office of Public Health

CERTIFIED MAIL: **7016 3560 0000 0462 0639**

April 18, 2018

Kevin Vanzant  
South Mansfield Water System  
P.O. Box 995  
Mansfield, LA 71052

Re: Class I Sanitary Survey  
South Mansfield Water System  
PWS ID LA1031014  
Desoto Parish

Dear Mayor Vanzant:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 9, 2018 sanitary survey inspection of the public water supply system for South Mansfield Water System (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
James Soileau	LDH-OPH Region 7
Ernest Wilbert	South Mansfield Water System

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	The housing of the chlorination building is not bolted down could easily blow away in the wind. This would leave the tanks exposed to direct sunlight and could damage the injection lines, leaving the system without treatment. The housing was also damaged and had holes in it. The housing should be replaced and shall be bolted down to ensure its stability.
FACILITY	CATEGORY	FINDINGS
Management	Other	All potable water systems shall be designed, constructed and maintained so as to prevent leakage of water due to defective materials, improper jointing, corrosion, settling, impacts, freezing, or other causes. Valves and blow-offs shall be provided so that necessary repairs can be made with a minimum interruption of service. At the time of inspection, the flow meter for well #1 was completely submerged in water. This prevents adequate measuring of water losses and hinders the ability to detect leaks in the distribution system. The flow meter pit shall be kept clear of water.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	No formal cross connection control program has been implemented for this water system. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1031014-001 - WELL #1, WELL FIELD NORTH	Source	The mesh screen on the air release valve was torn, creating a pathway for contamination. The screen shall be replaced with a new 24-mesh screen. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - DELTON ROAD PLANT	Treatment	There was no working fan in the chlorination building. Where chlorine gas is used, the room shall be constructed to provide the following: each room shall have a ventilating fan with capacity which provides one complete air change per minute when the room is occupied.
FACILITY	CATEGORY	FINDINGS
TP001 - DELTON ROAD PLANT	Treatment	There was only one regulator hooked up to a single chlorine cylinder. An automatic switchover should be attached to two chlorine cylinders to ensure continuous disinfection.
FACILITY	CATEGORY	FINDINGS
1031014-001 - WELL #1, WELL FIELD NORTH	Source	The pressure gauge on the well was broken. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.
FACILITY	CATEGORY	FINDINGS
1031014-003 - WELL #3, DELTON RD	Source	The well casing and discharge piping is starting to corrode. It should be repainted to prevent contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
PF001 - PUMP HOUSE	Pump/pumping facility and control	The light was out in the pump house. Pump stations shall be adequately lighted throughout.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TANK, FIRST ST.	Finished Water Storage	Proper protection shall be given to metal surfaces by paints or other protective coatings, by cathodic protective devices, or by both. The elevated tank is showing early signs of corrosion, and should be repainted.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Mary L Salley	South Desoto Water System

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system does not have a formal cross connection control program. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
1031029-001 - WELL #1	Source	There was a hole in the top of the well casing. This creates a pathway for contamination. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1031029-002 - WELL #2	Source	There were holes in the back of the electrical box on site. This could provide an entrance for small insects into the well casing. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
GR001 - GST #1	Finished Water Storage	The overflow piping ended at the top of the ground storage tank. All water storage structures shall be provided with an overflow which is brought down to an elevation between 12 and 24 inches above the ground surface, and discharges over a drainage inlet structure or a splash plate.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	General site cleanup is recommended at well 1 and the Lula Station site. There is an excess of unused parts on the ground at the well site. The area surrounding the well should be cleaned up.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Mansfield, LA 71052

Re: Class I Sanitary Survey  
Desoto Parish Water Works District 1  
PWS ID LA1031030  
De Soto Parish

Dear Mr. Waldon:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 9, 2018 sanitary survey inspection for Desoto Parish Water Works District 1. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

Name	Organization
Zahira Tieso	LDH\OPH District IV Engineering
Timothy Bryson	Desoto Parish WWKS District No. 1
John Neilson	Desoto Parish WWKS District No. 1
James Soileau	LDH\OPH Region 7

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	The ground was eroded under the fence at the Raw Water Intake and the Pelican Elevated Water Tank that allows for unauthorized access to the facility. The sites in question must be filled to secure the facilities against the entrance of unauthorized persons when the site is unattended by water system personnel.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There were threaded hose bibs installed on site at Pelican Elevated Water Tank, Grand Cane Elevated Water Tank, and Keatchie Elevated Water Tank. These taps shall be replace with smooth nozzle taps, or install a vacuum breaker at each of the sites in question. There shall be no connection or arrangement by which unsafe water may enter a public water supply system.
FACILITY	CATEGORY	FINDINGS
EL003 - EST #3, GRAND CANE	Finished Water Storage	The seal on the overflow piping between the screen and the discharge piping was corroded and not watertight. This could provide a pathway for contamination by allowing small insects into the tank. The overflow, on tanks or other structures containing water for any potable water supply must be constructed to prevent the entrance of birds, insects or other contaminants.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL002 - EST #2, BENSON	Finished Water Storage	The Benson Elevated Tank has a sinkhole at the base of the finished water storage facility. The area surrounding the structure has to be graded in a manner that will prevent water from standing within 50 feet of it.
FACILITY	CATEGORY	FINDINGS
EL004 - EST #4, KEATCHIE	Finished Water Storage	The Keatchie Elevated Tank has a sinkhole at the base of the finished water storage facility. The area surrounding the structure has to be graded in a manner that will prevent water from standing within 50 feet of it.
FACILITY	CATEGORY	FINDINGS
EL001 - EST #1, PELICAN	Finished Water Storage	The Pelican Elevated Tank has a sinkhole at the base of the finished water storage facility. The area surrounding the structure has to be graded in a manner that will prevent water from standing within 50 feet of it.
FACILITY	CATEGORY	FINDINGS

TP001 - SURFACE WATER TREATMENT PLANT	Treatment	The ammonia, alum, chlorite, and caustic bulk storage tanks did not have proper labeling. Chemicals must meet the appropriate ANSI/AWWA standards and/or ANSI/NSF Standard 60 and be labeled accordingly.
FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	The caustic feed lines were exposed in a high traffic area and were susceptible to damage. The chemical feed lines must be enclosed in a suitable conduit that protects the lines from any damage.
FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	The water system is currently in the process of relocating all bulk chemical storage tanks. The system must complete this project along with providing drainage, retention walls for each chemical provided, and the disposal of empty tanks. This deficiency was cited on the Water Treatment Plant Site Visit conducted on 12/16/2016.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	There was a plant growing close to the discharge piping inside the fencing of the intake area. Plant should be removed to prevent any damage of the equipment.
FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT	Treatment	The chlorite day tank had a baseball size hole in the top of the cover. This could allow small animals to climb inside the tank. The hole should be sealed, or an appropriate cover/lid should be used. Chemicals

PLANT		shall be stored in covered or unopened shipping containers, unless the chemical is transferred into an approved storage unit.
FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	The fans were not working at Pelican Elevated Water Tank, Grand Cane Elevated Water Tank and Keatchie Elevated Water Tank. Adequate ventilation shall be provided for all pumping stations for operator comfort and dissipation of excess heat from the equipment.

### **Written Response Required**

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the survey there were a number of metal tubes laying near the chlorine housing at the Lavey Lane site. These should either be disposed of properly or stored in a suitable manner.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the survey there were missing yearly test results for backflow prevention devices. The system should update the information in their cross connection control program.
FACILITY	CATEGORY	FINDINGS
1033003-001 - DEBRA STREET WELL #3	Source	The sanitary seal on the Debra Street well is in poor physical condition and shall be replaced to prevent failure and contamination of the well. See <b>Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
1033003-003 - LAVEY LANE WELL #4	Source	The sanitary seal on the Lavey Lane well is in poor physical condition and shall be replaced to prevent failure and contamination of the well. See <b>Attachment #8</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of the survey the water system was not able to present all of the bacteriological results from the past 10 years. All records with chlorine residuals on them shall be kept for 10 years.
FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the survey several of the fences around the facilities were beginning to be

		overgrown. All foliage should be trimmed back to retain the integrity of the fence as a non-climbable barrier.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the survey the sample taps on the system had a threaded tap. All threaded taps on sample points shall be replaced with smooth-nosed hardware. <b>See Attachment #6</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL002 - MISSISSIPPI STREET TOWER	Finished Water Storage	At the time of the survey standing water was present around the pilings of the elevated tank on Mississippi Street. The site grading should be reworked to prevent standing water from collecting within 50 feet of structures. <b>See Attachment #5</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL001 - GROOM ROAD TOWER	Finished Water Storage	At the time of the survey the screen on the elevated tank overflow was damaged. The screen shall be replaced with a non-corrodible, four mesh screen or better. <b>See Attachment #7</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL003 - LAVEY LANE TOWER	Finished Water Storage	At the time of the survey the screen on the elevated tank overflow was damaged. The screen shall be replaced with a non-corrodible, four mesh screen or better. <b>See Attachment #9</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP004 - LAVEY LANE 004 TREATMENT PLANT	Treatment	At the time of the survey the internal light in the chlorine structure was inoperable, replacement or repairs should be made as soon as possible.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP004 - LAVEY LANE 004 TREATMENT PLANT	Treatment	The screen on the chlorine feeder vent tubing has either been damaged or is missing. The screen should be replaced as soon as possible. <b>See Attachment #11</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>

TP003 - DEBRA STREET 003 TREATMENT PLANT	Treatment	The screen on the chlorine feeder vent tubing has either been damaged or is missing. The screen should be replaced as soon as possible. See <b>Attachment #4</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP004 - LAVEY LANE 004 TREATMENT PLANT	Treatment	The ventilating fan in the chlorine housing was inoperable during the survey and should be replaced as soon as possible.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP002 - MISSISSIPPI STREET 002 TREATMENT PLANT	Treatment	The ventilating fan in the chlorine housing was inoperable during the survey, and should be replaced as soon as possible. See <b>Attachment #10</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP003 - DEBRA STREET 003 TREATMENT PLANT	Treatment	The ventilating fan in the chlorine housing was inoperable during the survey, and should be replaced as soon as possible. See <b>Attachment #3</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1033003-001 - DEBRA STREET WELL #3	Source	At the time of the survey the area around the splash pad was beginning to show signs of erosion. The voids should be filled and reinforced to prevent structural damage to the slab. See <b>Attachment #2</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1033003-004 - MISSISSIPPI STREET WELL #2	Source	Check valve lever was showing signs of a leak, the cause should be investigated and repaired.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the survey there was an old chlorine storage shed outside of the fenced in facility. The housing should be stored in the fence until it can be disposed of safely. See <b>Attachment #12</b>
FACILITY	CATEGORY	FINDINGS
Management	Other	It is recommended that the water system finalize and formally adopt a written flushing program to assist in keeping water age down in low flow areas of the system.
FACILITY	CATEGORY	FINDINGS
TP001 - GROOM ROAD 001 TREATMENT PLANT	Treatment	At the time of the survey an unsecured empty cylinder was in the chlorine unit. All bottles shall be stored in an upright position and secured in such a way as to prevent upset, out of direct sunlight.

### **Written Response Required**

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
EL001 - FLONACHER	Finished Water Storage	During the inspection, it was observed that the overflow pipe of the Flonacher Rd. Elevated Storage Towers screen was in a state of disrepair. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of insects, dust or other contaminating material. The overflow pipe shall be screened with a 4 mesh, non-corrodible screen. <b>See Attachment #3</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
EL002 - AVENUE A	Finished Water Storage	The overflow splash plate at the Avenue A Storage Tower is not adequate. At the time of the inspection, the soil surrounding the overflow splash pad had been badly eroded. The eroded area around the splash pad and the base of the footing of the leg of the elevated tank must be corrected and measures must be taken to prevent erosion from occurring in the future. <b>See Attachment #1</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	During the survey, it was observed that the flushing assembly located at the Rush Ave. MRT was eroding the area

		around the supporting slab. It is recommended that measures should be taken to remedy the eroded area and prevent future erosion. <b>See Attachment #4</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	Other	It is recommended that the two existing hydro-pneumatic tanks at the Carpenter Well site be taken off line if not being used to pressure the water system.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	Other	It is strongly recommended that the water system develop and implement a written flushing program. The water distribution system and storage tanks should be flushed as necessary to reduce stagnant water and sediment build-up. Unidirectional and directional flushing are more effective than spot flushing.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	System Management and Operation	At the time of inspection, the Carpenter Rd., Fennwood Dr., Flonacher Rd., the Youth Park and Avenue A wells rotating pump shafts and couplings were exposed, presenting a risk to employee safety. Rigid guards, shields, or squirrel cages were not provided. It is recommended that squirrel cages be installed around the rotating shafts on the Carpenter Rd., Fennwood Dr., Flonacher Rd., the Youth Park and Avenue A wells.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP004 - YOUTH PARK TREATMENT PLANT	Treatment	At the time of the survey, the chlorine feed room at the Youth Park well site did not have panic hardware installed on the door. The chlorine feed room shall be provided with doors equipped with panic hardware, assuring ready means of exit and opening outward only to the building exterior.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>

TP005 - AVENUE A TREATMENT PLANT	Treatment	At the time of the survey, the chlorine feed room was observed to be exposed to the elements. It is recommended that it be housed in an enclosed building. <b>See Attachment #5</b>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP003 - FLONACHER ROAD TREATMENT PLANT	Treatment	During the survey, the chlorine feed room at the Flonacher Rd. well site did not have a door or a ventilating fan. The chlorine feed room at the Flonacher Rd. well site shall be provided with a door containing a shatter resistant inspection window and equipped with panic hardware. The chlorine feed room shall have a light, a ventilating fan that takes suction near the floor and air inlets near the ceiling. <b>See Attachment #2</b>

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Capitol Region II

Dear Ms. Creaghan:

The Notice of Violation Letter, dated December 17, 2018 via certified mail return receipt requested (#70181830000105807489), was sent to you in error and is hereby replaced by this Notice of Violation Letter, dated December 20, 2018 as follows:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 3, 2018 sanitary survey inspection of the public water supply system for AUDUBON PARK APARTMENTS WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

**No observations were recorded in this category.**

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of the survey the facility could not produce the chlorine residual records for all of the time frame that records are required to be kept. The chlorine residuals were not recorded every day. Chlorine residuals shall be taken daily and records maintained on the form approved by the state health officer and maintained for a period of three years. The chlorine residual should be taken at the entry point of the distribution system and point of maximum residence time.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	During the survey, it was noted that the point of entry (POE) lacked a sampling site. Audubon Park Apartments must install a sampling station with a smooth nosed tap for the purposes of collecting and recording daily chlorine residuals.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	At the time of inspection, the Audubon Park Apartments

		Ground Storage Tank did not have a splash pad. The splash pad must cover all areas near the tank subject to erosion from the overflow discharge. A splash pad is to be installed so that the overflow from the ground storage tank will not erode the ground surrounding the base of the storage tank. See <b>Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT	Treatment	At the time of inspection, the chlorine solution tank was not labeled. Tanks shall be clearly labeled with the name of the chemical contained. See <b>Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
1033133-001 - WELL #1	Source	During the survey, the air relief valves did not terminate in a down-turned position at least 18 inches above the floor/ground and the opening was not covered with a screen. The discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1033133-002 - WELL #2	Source	The air relief valve on Well #2 did not have a screen covering the exhaust opening. The discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh corrosion resistant screen. See <b>Attachment #1</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	Well #8 has a significant packing leak beneath the motor. This has potential to lead to major equipment malfunction and should be addressed as quickly as possible. See <b>Attachment #9</b>
FACILITY	CATEGORY	FINDINGS
2033065-005 - RHODIA WELL #9	Source	Air release exhaust piping was not screened, creating a pathway for contamination into the aquifer. A 24 mesh corrosion resistant screen shall be installed. See <b>Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
2033065-004 - RHODIA WELL #8	Source	The discharge piping on the air relief valve is pointing upwards and is not screened off. The piping shall be turned down, terminating at least 18 inches above the ground surface, and covered with a 24 mesh corrosion resistant screen. See <b>Attachment #7</b>
FACILITY	CATEGORY	FINDINGS
2033065-002 - RHODIA WELL #4	Source	The well is currently inoperable, the water system shall submit a plan with timeframes to return the well to service or to plug and abandon it in accordance with the Louisiana Water Well Rules, Regulations, and Standards.
FACILITY	CATEGORY	FINDINGS
2033065-002 - RHODIA WELL #4	Source	The well site grading is not maintained to prevent pooling of water around the well slab. Grading shall be reworked to eliminate the potential for standing water around the slab and the potential for introduction of contaminants. See <b>Attachment #8</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	A valve pit next to the elevated storage tower was filled with standing water. The cause of the standing water should be investigated and resolved. See <b>Attachment #10</b>
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	Elevated storage overflow has eroded the ground surrounding the drainage inlet structure, the voids created should be refilled and reinforced. See <b>Attachment #11</b>
FACILITY	CATEGORY	FINDINGS
2033065-004 - RHODIA WELL #8	Source	The cage surrounding the drive shaft on the motor has become loose and no longer adequately covers the equipment to prevent injury. If the current cage cannot be secured it should be replaced. See <b>Attachment #6</b>
FACILITY	CATEGORY	FINDINGS
2033065-004 - RHODIA WELL #8	Source	The discharge piping on Well #8 did not contain a flow meter. All wells shall be equipped with a means to measure flow. See <b>Attachment #5</b>
FACILITY	CATEGORY	FINDINGS
2033065-001 - RHODIA WELL #2	Source	Well casing does not project 18 inches above final ground surface.
FACILITY	CATEGORY	FINDINGS
2033065-004 - RHODIA WELL #8	Source	Well casing does not project 18 inches above final ground surface.
FACILITY	CATEGORY	FINDINGS
2033065-005 - RHODIA WELL #9	Source	Well casing does not project 18 inches above final ground surface. See <b>Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
2033065-004 - RHODIA WELL #8	Source	Well casing was not vented to atmosphere. The vent shall terminate in a downturned position, at or above the top of the casing or pitless unit, no less than 12 inches above grade or floor, in a minimum 1 inch

		diameter opening covered with a 24 mesh, corrosion resistant screen. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
2033065-001 - RHODIA WELL #2	Source	Well casing was not vented to atmosphere. The vent shall terminate in a downturned position, at or above the top of the casing or pitless unit, no less than 12 inches above grade or floor, in a minimum 1 inch diameter opening covered with a 24 mesh, corrosion resistant screen. <b>See Attachment #3</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	Please provide more information about the backflow prevention on the line from Well #4 to the cooling tower.
FACILITY	CATEGORY	FINDINGS
Management	Other	Smooth nozzled sample tap was painted over on well 8. Please replace the tap as the painted surface can house bacteria and cause positive bacteriological results.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Capitol Region II  
Attn: Clark Broussard,  
P. O. Box 4489, Bin #10, Bienville Bldg  
Baton Rouge, Louisiana 70821-4489

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 225-342-7301.

Respectfully,

### Unresolved Observations

Visit Date	Notify Date	Reason	Severity	Category	Facility
09/20/2013	10/02/2013	Sanitary Survey, Finished	Minor	Source	2033133-001-WELL-001
<b>Comments:</b> Valving is not provided to permit test pumping. Install appropriate valving.					

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	All potable water systems shall be designed, constructed and maintained so as to prevent leakage of water due to defective materials, improper jointing, corrosion, settling, impacts, freezing, or other causes. Valves and blow-offs shall be provided so that necessary repairs can be made with a minimum interruption of service. At Time of Survey piping by the Well was leaking. <b>Attachment 1 See Attachment #1</b>

### **Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The Operator of any public water system or any community sewerage system shall hold current and valid professional certification(s) of the required category(s) at or above the level required for the total system and individual facility. Additionally, an operator shall demonstrate that, when not actually on site at the facility, he is capable of responding to that location within one hour of being notified that his presence is needed. Notified water system of Monday's inspection and called Operator to assist. Was assisted by maintenance without operator arriving in timeline.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	40 CFR 141.403 and LAC 51:XII.903.B - The water supply must provide suitable taps which draw water directly from the mains or the service lines. Such taps provide for samples which are most representative of the quality of water provided without "interference" which may be caused by plumbing problems within residences or other structures. Use of such taps decreases the chance of "bad samples" resulting in a coliform maximum contaminant level (MCL) violation which requires public notification by the public water supply and an administrative enforcement action by the EPA/DHH against the public water supply. Sample taps contain a dead water area and split valves are not approved. <b>See Attachment #3</b>

FACILITY	CATEGORY	FINDINGS
2033133-001 - WELL-001	Source	The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained. Check valve is required before chlorination. See Attachment #2

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water pipes are showing signs of corrosion. This corrosion can result in leaks if not treated. The water pipes are to be cleaned and treated to prevent further corrosion.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Capitol Region II  
 Attn: Ryan Farlow, R.S.  
 P. O. Box 4489, Bin #10, Bienville Bldg.  
 Baton Rouge, Louisiana 70821-4489

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

Violation Number	Violation Date	Violation Type	Compliance Period
121	12/12/2017	PUBLIC NOTICE RULE LINKED TO VIOLATION	

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 225-342-9163.

Respectfully,

A handwritten signature in blue ink, appearing to read 'Ryan Farlow', with a stylized flourish at the end.

EAST CARROLL WS SOUTH Public Water System  
PWS ID LA1035007  
EAST CARROLL Parish

Dear Mr. Fortenberry:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 12, 2018 sanitary survey inspection of the public water supply system for EAST CARROLL WS SOUTH (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

Phone #: 318-361-7201 • Fax #: 318-362-3163 • [www.ldh.la.gov](http://www.ldh.la.gov)  
"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
09/29/2015	10/07/2015	Sanitary Survey, Finished	Minor	Finished Water Storage	EL001-ELEVATED TANK
<b>Comments:</b> At the time of inspection there was no splash plate present under the elevated tanks overflow. Please have a splash plate installed once the existing hole has been filled. 40 CFR 141.403 and TSS 7.0.7 - All water storage structures shall discharges over a drainage inlet structure or a splash plate.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
09/29/2015	10/07/2015	Sanitary Survey, Finished	Minor	Finished Water Storage	EL001-ELEVATED TANK
<b>Comments:</b> At the time of inspection there was a large hole under the overflow of the elevated tank. The hole is in very close proximity to one of the elevated tank's leg foundations. Please have the hole filled to prevent standing water and foundation failure. 40 CFR 141.403 and TSS 7.0.16 - The area surrounding a ground-level structure shall be graded in a manner that will prevent surface water from standing within 50 feet of it.					

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the inspection, it was noted that the East Carroll Water System does not have a generator for the pumps located at the pump house on highway 65 North site. A generator which is powerful enough to operate the equipment and pumps at the highway 65 North site is required .
FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the inspection, significant erosion was noted at the southeastern corner footing of the elevated storage tank where the splash pad from the elevated storage tank overflow had washed away leaving a large hole that not only exposed the foundational footing, but

		also leaves a large open hole below the fencing which allows access to the site. Restore the eroded soil around the southeastern corner footing of the elevated storage tank and replace the splash block and level the soil in the elevated tank yard to prevent future erosion and provide security for the site by closing the hole under the fence. Also corrosion was observed on some of the piping in the pump house. Scrape and paint the piping and replace any damaged pipes if necessary in the pump house
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the inspection, the water system has adopted a formal cross connection control program, however it is not being enforced at this time and the water system has not identified all customers who may need or have back flow devices. Have a survey performed by a qualified individual to identify all customers who need back flow devices and enforce the formal cross connection control program.

#### Deficiencies

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE	Finished Water Storage	At the time of the inspection, it was noted that one of the bolts for the hinge for the hatch on top of the tank was missing. Replace the bolt and make sure the man way is secured with a lock. Also the ladder for the ground storage tank lacks a lockable gateway at the point of the point of entry at the safety cage. Add a lockable gate at the beginning of the safety cage for the ladder and lock it to prevent unwanted access to the top of the tank.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and

**include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

**The old 55 gallon drum of hypochlorite inside the pump house and the pile of broken pipes and etc. should be removed from the site and disposed of properly at a licensed land fill.**

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northeast Region VIII  
Attn: Stephen K Ray, R.S.  
P O Box 6118  
Monroe LA 71211-6118

The following compliance history is provided for your information

### **Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

### **Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The Town of Clinton Water System is not being operated by a person whose competency has been duly certified by the state health officer for the type of facility and the population it

		serves. All water systems are required to have a certified operator to conduct the daily duties to maintain the system; e.g.: adjusting chemical feed rates based on demand, operating chemical feed pumps, and exercising valves.
FACILITY	CATEGORY	FINDINGS
Management	Other	During the survey the inlet/outlet pipe of the Taylor St. elevated tower had a significant leak. All potable water systems shall be designed, constructed and maintained so as to prevent leakage of water due to defective materials, improper jointing, corrosion, settling, impacts, freezing, or other causes. The inlet/outlet pipe shall be inspected and repaired. <b>See Attachment #8</b>
FACILITY	CATEGORY	FINDINGS
Management	Other	The MRT-012 sample tap located at 12126 Liberty St., was in a state of disrepair. At the time of inspection, the MRT sample tap did not have a handle or a method of turning the water on. The system lacks the means of taking a daily chlorine residual at the MRT as prescribed in LAC51:XII.367.B.3. The sampling tap at MRT-012 shall be repaired or replaced in order to take the daily chlorine residual. <b>See Attachment #10</b>
FACILITY	CATEGORY	FINDINGS
Management	Other	The pump motor mount was not bolted down to the well foundation. The vibration from the motor not being secured to the foundation can cause significant damage to the drive shaft bushings, the well casing and the discharge pipe. The pump motor must be secured to the well foundation to ensure that the well and its

		appurtenances shall be protected from physical damage. See <b>Attachment #11</b>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system did not have a cross connection control ordinance. A formal cross connection control plan is required. Each water utility shall have a program conforming to state requirements to detect and eliminate cross connections. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. An adopted and signed cross connection control plan shall be provided to this office.
FACILITY	CATEGORY	FINDINGS
1037001-003 - WELL PINE RIDGE ROAD	Source	At the time of the survey, the Taylor St. Well was the only source of water for the Town of Clinton. When groundwater is the only source of water supply for a community water system, a minimum of two approved and active groundwater wells shall be provided.
FACILITY	CATEGORY	FINDINGS
1037001-003 - WELL PINE RIDGE ROAD	Source	There shall be no pathway for contamination into the well casing. A water tight sanitary seal at the top of the casing is not provided due to an unsealed pump wire casing entrance. A water tight sanitary seal must be provided at the pump wire casing entrance on the Pine Ridge Rd. well. See <b>Attachment #2</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of the survey the facility could not produce the bacteriological results for all of the 10 year time frame that records are required to be kept. The chlorine residuals were not recorded every day. Chlorine residuals shall be taken daily and records maintained on the form approved by the state health officer and maintained for a period of three years. The chlorine residual shall be taken at the entry point of the distribution system and point of maximum residence time.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, the Point of Entry sample tap at the Taylor St. well site included a three tap configuration consisting of two taps sharing a "T" connection and a third tap on a separate leg of the piping arrangement. The water system must provide a single smooth nosed tap at the Point of Entry on a dedicated connection. See <b>Attachment #7</b>
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED - TAYLOR STREET	Finished Water Storage	The overflow splash plate at the Taylor St. Elevated Tower is not adequate. At the time of the inspection, the soil surrounding the overflow splash pad had been badly eroded. The eroded area around the splash pad and the base of the footing of the leg of the elevated tank must be corrected and measures must be taken to prevent erosion from occurring in the future.
FACILITY	CATEGORY	FINDINGS
1037001-003 - WELL PINE RIDGE ROAD	Source	During the inspection, the Pine Ridge Rd. well did not have a working flow meter. Each well is required to have a means of measuring flow. Fix or replace the flow meter at the Pine Ridge Rd. well. See <b>Attachment #1</b>

FACILITY	CATEGORY	FINDINGS
1037001-001 - TOWN OF CLINTON WELL #1(TAYLOR ST.)	Source	During the survey, the screen on the air relief piping was observed to be the wrong size mesh. The discharge piping shall be equipped with air relief piping covered with a 24 mesh corrosion resistant screen. The water system shall install a 24 mesh corrosion resistant screen on the air relief pipe at the Taylor ST. Well. See <b>Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
1037001-001 - TOWN OF CLINTON WELL #1(TAYLOR ST.)	Source	The electrical boxes at the Taylor St. well site were open to the elements and had bare wires exposed. The housing for the wiring for the Taylor St. well shall be repaired and all wiring shall be protected from the environment and physical damage. See <b>Attachment #5</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	In accordance with the provisions found in LA HB894, the Town of Clinton water system is here-by notified that the water system implement a

		<p>demonstrated flushing program. A properly designed and implemented flushing program is considered to be a valuable tool to significantly improve water quality and increase the reliability of the water distribution system. The flushing program must be documented and periodically evaluated for effectiveness. Of the various types of flushing programs that can be implemented, a unidirectional flushing (UDF) program is preferred where system design allows. UDF is the strategic closing of valves and opening of hydrants to flush one segment of main in a SINGLE DIRECTION (UDF). Higher velocities (&gt; 5 fps is desirable) scour and remove sediment and deposits from water mains. Within 60 days of receipt of this survey develop and implement a flushing program.</p>
FACILITY	CATEGORY	FINDINGS
Management	Other	<p>In accordance with the provisions found in LA HB894, the Town of Clinton water system shall maintain a record of each complaint it receives by telephone, letter, or electronic mail from customers or users. The record of each complaint shall include the date the complaint was received, the service connection to which the complaint relates, the name of the customer or user making the complaint and associated contact information, and a brief description of the complaint. The log containing the record shall also include documentation of corrective actions that the water system has implemented with respect to the matters detailed in the complaint. The Town of Clinton water system shall retain the</p>

		complaint records for at least five years, and shall make the records available to the Louisiana Department of Health upon request and without charge. Within 60 days of receipt of this survey develop and implement a complaint log.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	At the time of inspection, the Taylor St. and the Pine Ridge Rd. wells rotating pump shafts and couplings were exposed, presenting a risk to employee safety. Rigid guards, shields, or squirrel cages were not provided. It is recommended the squirrel cages be installed around the rotating shafts on the Taylor St. and the Pine Ridge Rd. wells. <b>See Attachment #12 and #13</b>
FACILITY	CATEGORY	FINDINGS
TP003 - PINE RIDGE ROAD TP	Treatment	At the time of the inspection, the chlorine gas cylinders in the Pine Ridge Rd. treatment plant were not restrained. Full and empty cylinders of chlorine gas should be restrained in position to prevent upset and possible leakage. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1(TAYLOR ST.)CLINTON	Treatment	At the time of the inspection, the chlorine gas cylinders in the Taylor St. treatment plant were not restrained. Full and empty cylinders of chlorine gas should be restrained in position to prevent upset and possible leakage. <b>See Attachment #6</b>

**Facility ID:** DISTRIBUTION SYSTEM

**Category:** Distribution System

**Attachment Comments:** At the time of inspection, the Point of Entry sample tap at the Taylor St. well site included a three tap configuration consisting of two taps sharing a T connection and a third tap on a separate leg of the piping arrangement. The water system must provide a single smooth nosed tap at the Point of Entry on a dedicated connection.

**Attachment #8**

**Severity:** Significant

**Category:** Other

**Attachment Comments:** During the survey the inlet/outlet pipe of the Taylor St. elevated tower had a significant leak. All potable water systems shall be designed, constructed and maintained so as to prevent leakage of water due to defective materials, improper jointing, corrosion, settling, impacts, freezing, or other causes. The inlet/outlet pipe shall be inspected and repaired.

**Attachment #10**

**Severity:** Significant

**Category:** Other

**Attachment Comments:** At the time of inspection, the MRT sample did not have a handle or a method of turning the water on. The sampling tap at MRT-012 shall be repaired or replaced in order to take the daily chlorine residual.

**Attachment #11**

**Severity:** Significant

**Category:** Other

**Attachment Comments:** The pump motor mount was not bolted down to the well foundation. The pump motor must be secured to the well foundation to ensure that the well and its appurtenances shall be protected from physical damage.

**Attachment #12**

**Severity:** Recommendations

**Category:** System Management and Operation

**Attachment Comments:** At the time of inspection, the Taylor St. wells' rotating pump shaft and couplings were exposed, presenting a risk to employee safety. Rigid guards, shields, or squirrel cages were not provided. It is recommended a squirrel cage be installed around the rotating shaft on the Taylor St. well.

**Attachment #13**

**Severity:** Recommendations

**Category:** System Management and Operation

**Attachment Comments:** At the time of inspection, the Pine Ridge Rd. wells' rotating pump shaft and couplings were exposed, presenting a risk to employee safety. Rigid guards, shields, or squirrel cages were not provided. It is recommended a squirrel cage be installed around the rotating shaft on the Pine Ridge Rd. well.

Re: Class I Sanitary Survey  
East Side Water System  
PWS ID #: LA 1039003  
Evangeline Parish

Dear Mr. LaFleur:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 29, 2018 sanitary survey inspection of the public water supply system for East Side Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Hayden K. Keigley	LDH/OPH Region 4 Engineering
Rose Fontenot	East Side Water System
Derek Marcantel	East Side Water System

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

Visit Date	Notify Date	Reason	Severity	Category	Facility
01/25/16	02/15/16	Sanitary Survey, Finished	Minor	Finished Water Storage	GR002 Ground Storage Tank #2 (South Tank)
<b>Comments:</b> Please verify compromised mesh for drain line has been replaced.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
01/25/16	02/15/16	Sample Collection	Minor	Finished Water Storage	GR002 Ground Storage Tank #2 (South Tank)
<b>Comments:</b> Please verify compromised mesh for drain line has been replaced.					

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	An approved chemical lab status certification has not been obtained from LDH for analyzing the physical and chemical analytes currently being monitored by the water system. All public water systems must use an approved chemical laboratory to perform all required chemical analyses using approved laboratory methodologies. Review the required instruction at <a href="http://ldh.la.gov/assets/oph/CenterEH/engineering/SDWP/Lab_Approval_Instructions.pdf">http://ldh.la.gov/assets/oph/CenterEH/engineering/SDWP/Lab_Approval_Instructions.pdf</a> and complete the required form located at <a href="http://ldh.la.gov/index.cfm/page/963">http://ldh.la.gov/index.cfm/page/963</a> under the heading "Approved Laboratory Form (Instructions)".
FACILITY	CATEGORY	FINDINGS
1039003-002 Well #2 East Hickory Street (South Well)	Source	The area around the well is wet due to excessive discharge from the well. The ponding water presents a potential source of contamination. The discharge from the well needs to be addressed.
FACILITY	CATEGORY	FINDINGS
1039003-001 Well #1 East Hickory Street (North Well)	Source	The screening for the well's casing vent is not secured and is inadequate. The well casing vent must be covered with a 24 mesh, corrosion resistant screen. Repair or replace the well casing vent screen to prevent the entrance of contaminants.

**Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL001 Elevated Tower	Finished Water Storage	From review, the elevated tower should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the elevated tower's interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the elevated tower could benefit from an inspection.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL001 Elevated Tower	Finished Water Storage	The existing screen for the elevated tower overflow pipe is inadequate. The overflow piping must be screened with a four mesh, non-corrodible screen. Replace the existing screen with a new four mesh, non-corrodible screen to provide protection at all times.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR001 Ground Storage Tank #1 (North Tank)	Finished Water Storage	The overflow pipe is not securely screened. The overflow pipe must be screened with twenty-four mesh, non-corrodible screen and securely installed to provide protection at all times.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR001 Ground Storage Tank #1 (North Tank)	Finished Water Storage	The overflow piping for the ground storage tank terminates too close to the natural ground surface. The discharge outlet for the overflow piping must be installed at an elevation between 12 and 24 inches above a splash plate. Modify the existing overflow piping to maintain an adequate elevation that terminates above the splash plate.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR002 Ground Storage Tank #2 (South Tank)	Finished Water Storage	The overflow piping for the ground storage tank terminates too close to the natural ground surface. The discharge outlet for the overflow piping must be installed at an elevation between 12 and 24 inches above a splash plate. Modify the existing overflow piping to maintain an adequate elevation that terminates above the splash plate.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR002 Ground Storage Tank #2 (South Tank)	Finished Water Storage	The screen for the ground storage overflow pipe is damaged. The overflow pipe must be screened with a twenty-four mesh, non-corrodible screen. Replace the damaged screen to provide sanitary protection at all times.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP002 Treatment Plant #2 for Well #3	Treatment	The chlorine gas room must have separate switches for the fan and lights located outside of the chlorine room. The light in the chlorine room is currently not operational. Either the bulb is burnt or there is an electrical issue. Install separate switches outside of the chlorine room to control the lighting and ventilating fan.

FACILITY	CATEGORY	FINDINGS
TP001 Treatment Plant #1 for Wells #1 & #2	Treatment	The light is currently not operational. Either the bulb is burnt or there is an electrical issue. The chlorine room must be equipped with a working light.
FACILITY	CATEGORY	FINDINGS
1039003-001 Well #1 East Hickory Street (North Well)	Source	The well's outer casing and steel base plate used to support the pump are showing signs of rusting and flaking paint. The well's outer casing and steel base plate must be maintained to avoid further corrosion and deterioration. Clean, treat and paint the well's outer casing and steel base plate to prevent potential sources of contamination.
FACILITY	CATEGORY	FINDINGS
1039003-003 Well #3 Opelousas Road	Source	The well's outer casing and steel base plate used to support the pump are showing signs of rusting, corrosion and/or flaking paint. The well's outer casing and steel base plate must be maintained to avoid further corrosion and deterioration. Clean, treat and paint the well's outer casing and steel base plate to prevent potential sources of contamination.
FACILITY	CATEGORY	FINDINGS
1039003-002 Well #2 East Hickory Street (South Well)	Source	The well's outer casing, casing vent piping and steel base plate used to support the pump are showing signs of rusting and corrosion. The well's outer casing, casing vent piping and steel base plate must be maintained to avoid further corrosion and deterioration. Clean, treat and paint the well's outer casing, casing vent piping and steel base plate to prevent potential sources of contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP002 Treatment Plant #2 for Well #3	Treatment	The chlorine feed room is not equipped with an inspection window. A shatter resistant inspection window is required where chlorine gas is fed.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1039006-001 - WELL #1 - S WELL FURTHEST DOUGET RD	Source	The well's casing vent is not covered by a 24 mesh corrosion resistant screen. The well's casing vent must be covered by a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1039006-002 - WELL #2 - N WELL CLOSEST DOUGET RD	Source	The well's casing vent is not covered by a 24 mesh corrosion resistant screen. The well's casing vent must be covered by a 24 mesh corrosion resistant screen.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website at the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND #1	Finished Water Storage	From review, the finished water storage facilities (ground storage tanks and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
HD001 - SOUTH HYDRO	Finished Water Storage	From review, the finished water storage facilities (ground storage tanks and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally

		maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
HD002 - NORTH HYDRO	Finished Water Storage	From review, the finished water storage facilities (ground storage tanks and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND #2	Finished Water Storage	From review, the finished water storage facilities (ground storage tanks and hydropneumatic tanks) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND #2	Finished Water Storage	The finished water storage facility is not equipped with an approved sample tap. The finished water storage facility must be equipped with a smooth-nosed sampling tap. Install an approved tap on the tank in a downturned direction to facilitate the collection of water samples for bacteriological and chemical analyses, when needed.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT - WELL #1	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT - WELL #1	Treatment	The point of entry tap needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The point of entry tap should be a true representative of the water being delivered to the customer.

### **Written Response Required**

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

#### Unresolved Observations

Visit Date	Notify Date	Reason	Severity	Category	Facility
01/25/16	02/15/16	Sanitary Survey, Finished	Minor	Finished Water Storage	EL001 Elevated Tower
<b>Comments:</b> The current screen covering the tank overflow valve is exhibiting signs of blowout from tank overflow because the screen is finer than a four mesh and covered in paint. The screen will eventually need to be replaced.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
01/25/16	02/15/16	Sample Collection	Minor	Finished Water Storage	EL001 Elevated Tower
<b>Comments:</b> The current screen covering the tank overflow valve is exhibiting signs of blowout from tank overflow because the screen is finer than a four mesh and covered in paint. The screen will eventually need to be replaced.					

#### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 Distribution System	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been adequately enforcing the CCCP and there were only a few current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and the current annual test reports for all customers with backflow preventers.
FACILITY	CATEGORY	FINDINGS
1039007-002 Well #2 Sunflower Road	Source	From review, the casing seal for the well has deteriorated. The well must have an adequate casing seal to prevent against the entrance of contaminants into the well's casing. Replace the well's casing seal to protect the source from bacteriological contamination.

FACILITY	CATEGORY	FINDINGS
1039007-001 Well #1 Near Water Tower	Source	The well has been physically disconnected and is currently inactive. All wells that are not being used as a source of water must be properly plugged and abandoned in accordance with all of Louisiana's applicable standards, rules and regulations. Upon completion, provide written documentation to LDH stating that the well has been properly plugged and abandoned.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
EL001 Elevated Tower	Finished Water Storage	The screen for the overflow piping on the elevated tower is damaged and inadequate. The overflow piping must be screened with a four mesh, non-corrodible screen. Replace the damaged screen with a new four mesh, non-corrodible screen to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
TP003 Treatment Plant #3 for Well #2	Treatment	The light in the chlorine room is currently not operational. Either the bulb is burnt or there is an electrical issue. The chlorine room must be equipped with a working light.

FACILITY	CATEGORY	FINDINGS
TP002 Treatment Plant #2 for Well #3	Treatment	The lights in the chlorine rooms are currently not operational. Either the bulbs are burnt or there is an electrical issue. The chlorine rooms must be equipped with a working light.
FACILITY	CATEGORY	FINDINGS
1039007-002 Well #2 Sunflower Road	Source	The exhaust/relief piping for the air release-vacuum relief valve is not properly screened. The relief piping must be covered with a 24 mesh, corrosion resistant screen. Replace the current screening on the relief piping with a 24 mesh, non-corrodible screen to protect against potential entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1039007-002 Well #2 Sunflower Road	Source	The well's outer casing and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing and steel base plate to prevent potential sources of contamination.
FACILITY	CATEGORY	FINDINGS
1039007-003 Well #3 Tiger Lane	Source	The well's outer casing and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and/or flaking paint. The well's outer casing and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing and steel base plate to prevent potential sources of contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP002 Treatment Plant #2 for Well #3	Treatment	The chlorine feed room is not equipped with an inspection window. A shatter resistant inspection window is required where chlorine gas is fed.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP002 Treatment Plant #2 for Well #3	Treatment	The point of entry (POE) sample tap is not a smooth nosed sample tap. The POE tap must be smooth nosed, which is suitable for obtaining samples for bacteriological and chemical analysis. Replace the threaded tap at the POE-009 sampling site with an approved smooth nosed tap.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV

Re: Class I Sanitary Survey  
CITY of VILLE PLATTE WATER SYSTEM Public Water System  
PWS ID LA1039010  
EVANGELINE Parish

Dear Mayor Vidrine:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 6, 2018 sanitary survey inspection of the public water supply system for CITY of VILLE PLATTE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Steven R. Joubert	OPH-Region V Engineering
Hammy Duplechin	CENLA Environmental Science
Alexis Premeaux	CENLA Environmental Science
Mary Basco	CENLA Environmental Science
Cliff Fontenot	City Of Ville Platte Water Sys
Don White	City Of Ville Platte Water Sys

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

No unresolved observations were recorded in this category.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance or written policy for a Cross Connection Control Program (CCCP) was not adopted by the water system. The water system has not been enforcing a CCCP and there were no current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers, once identified, must be given notification of their obligations as part of the water system's working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.
FACILITY	CATEGORY	FINDINGS
1039010-002 - WELL #8 - SE RAILROAD AVE	Source	1. The perforated pipe serving as the screening for the well's casing vent is too coarse and does not provide the effective area of a properly installed 24 mesh corrosion resistant screen. The well's casing vent must be covered with a 24 mesh corrosion resistant screen. Replace the well's casing vent screening to prevent the entrance of contaminants. 2. The steel plate above the casing seal has a hole that provides for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate any voids in the casing seal to prevent bacteriological contamination.
FACILITY	CATEGORY	FINDINGS
1039010-004 - WELL #6 - SW RAILROAD AVE	Source	1. The casing seal for the well has deteriorated. The well must have an adequate casing seal to prevent against the entrance of contaminants into the wells casing. Replace the well's casing seal to protect the source from bacteriological contamination.

		2. The current piping arrangement of the well's discharge piping allows for a fixed volume of water to reside in a segment of pipe without being refreshed. The stagnant volume is exposed to raw water for further delivery to treatment. The discharge piping must be modified to eliminate the exposure to the stagnant water.
FACILITY	CATEGORY	FINDINGS
1039010-001 - WELL #9 - TE MAMOU RD	Source	The casing seal for the well has deteriorated. The well must have an adequate casing seal to prevent against the entrance of contaminants into the wells casing. Replace the well's casing seal to protect the source from bacteriological contamination.
FACILITY	CATEGORY	FINDINGS
1039010-005 - WELL #5 - NOT IN USE	Source	The well is currently inactive due to high iron levels and a broken shaft. The water system has no desire to put the well back into service. The well must be properly plugged and abandoned. All wells that are not being used as a source of water must be properly plugged and abandoned in accordance with all of Louisiana's applicable standards, rules and regulations. Upon completion, provide written documentation to LDH stating that the well has been properly plugged and abandoned.
FACILITY	CATEGORY	FINDINGS
1039010-006 - WELL #10 - LINCOLN RD; WATER TOWER SITE	Source	There is a pit filled with water near the well. The area around the well must be well-drained and facilitate the rapid removal of water within a 50 foot radius of the well. The ponding water presents a potential source of contamination. The questionable water in the pit also provides for a potential cross connection with a chemical injection point in this area.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological and chemical test result reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, some test results were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH. The water system is encouraged to develop and maintain files as reflected in the survey guidance shared during setting up the survey appointment. (Lead and Copper, Bacteriological, Stage 2 Disinfection By Products, Chlorine Residual Records, Chemical Records (Nitrate Samples & Chemical Samples from the wells))
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE AT PLANT (CW)	Finished Water Storage	From review, the finished water storage facility should be inspected. The finished water storage facility is currently inactive due to the repair of a service pump. This period of inactivation can be used to properly inspect and clean the storage structure. Finished water storage facilities are

		generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facility could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
EL003 - LINCOLN RD ELEVATED TOWER	Finished Water Storage	The level gauge for the elevated storage tower is broken. It is unclear, if alternate measures are being used by the water system to confirm the level of storage in the tower. The level gauge shall be repaired and brought back to working order, unless the water system implements another way of monitoring the water level in this structure.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL #6 TREATMENT PLANT	Treatment	The chlorine gas room currently does not have an air intake louver. The chlorine gas room must be constructed with an air intake located near the ceiling. Install a screened air intake louver or openings near the ceiling to properly ventilate the chlorine gas room. Air movement should be through screened louvers or openings near the ceiling. Every square foot of space requires at least 1 square inch of effective opening for proper ventilation.
FACILITY	CATEGORY	FINDINGS
1039010-007 - WELL #11 - RAILROAD ST.	Source	The perforated pipe serving as the screening for the air release-vacuum relief valve is too coarse and does not provide the effective area of a properly installed 24 mesh corrosion resistant screen. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screening to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1039010-002 - WELL #8 - SE RAILROAD AVE	Source	The perforated pipe serving as the screening for the air release-vacuum relief valve is too coarse and does not provide the effective area of a properly installed 24 mesh corrosion resistant screen. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screening to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1039010-001 - WELL #9 - TE MAMOU RD	Source	The well's outer casing has severe pitting of the steel. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

FACILITY	CATEGORY	FINDINGS
1039010-004 - WELL #6 - SW RAILROAD AVE	Source	The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP006 - WEST END CHLORINE BOOSTER STATION	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL #6 TREATMENT PLANT	Treatment	The chlorine feed room is not equipped with an inspection window. A shatter resistant inspection window is required where chlorine gas is fed.
FACILITY	CATEGORY	FINDINGS
TP003 - WELL #8 TREATMENT PLANT	Treatment	The chlorine feed room is not equipped with an inspection window. A shatter resistant inspection window is required where chlorine gas is fed.
FACILITY	CATEGORY	FINDINGS
TP004 - WELL #9 TREATMENT PLANT	Treatment	The chlorine feed room is not equipped with an inspection window. A shatter resistant inspection window is required where chlorine gas is fed.

FACILITY	CATEGORY	FINDINGS
TP001 - WELL #6 TREATMENT PLANT	Treatment	The point of entry sample tap is connected to a tee with on leg shared with an in frequently used connection to a fixture. The point of entry sample tap must be smooth nosed and supportive of sampling measures only. The connection to the infrequently used fixture must be discontinued to ensure accurate water quality measurements.

### Written Response Required

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

William Vidrine	Village Of Turkey Creek Water

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been enforcing the CCCP and there were no current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
TP003 - TREATMENT PLANT - WELL #3	Treatment	The light is currently not operational, either the bulb is burned or there is an electrical issue. The chlorine room must be equipped with a working light.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

Re: Class I Sanitary Survey  
WARD 5 WW DISTRICT 1 - LONE PINE Public Water System  
PWS ID LA1039017  
EVANGELINE Parish

Dear Mr. Deville:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the January 29, 2018 sanitary survey inspection of the public water supply system for WARD 5 WW DISTRICT 1 - LONE PINE (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

Ward 5 WW District #1 Lone Pine  
LDH Region IV Engineering

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. There were no current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily. An additional chlorine residual check must be made monthly at the ACR site. These points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Please start measuring and recording the residuals at the locations described using a digital chlorine analyzer. Residuals must also be recorded on signed and dated "LDH Approved Chlorine Residual Forms", which can be found at: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next 3 months, properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT - WELL #1	Treatment	The light is currently not operational, either the bulb is burned or there is an electrical issue. The chlorine room must be equipped with a working light.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT - WELL #1	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT - WELL #1	Treatment	The empty chlorine gas cylinder was not properly secured. Full and empty cylinders of chlorine gas must be restrained in position at all times to prevent upset. Properly secure all chlorine gas cylinders.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

"An Equal Opportunity Employer"

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1039018-002 - WELL #2	Source	Well #2 (East Well) is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve. The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological test and chemical test results reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, some test results were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system is recording routine chlorine residuals for the POE, MRT, and ACR site locations on unapproved (i.e. outdated) Chlorine Residual Forms. Additionally, some forms were missing site location information (i.e. address and point of collection ID). Routine chlorine residuals and the corresponding site location information must be recorded on signed and dated "LDH Approved Chlorine Residual Forms". Updated forms can be found at:  <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> .
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system's total coliform monitoring plan is outdated and has been returned for updating. The repeat site worksheet for routine bacteriological monitoring must be completed. Each repeat sampling site must have the correct address and a description of the location. The water system can complete the required worksheet by logging into the Monitoring Plan Portal at <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a> . The OPH Region 4 engineering staff can be reached by phone at 337-262-5746 to discuss the review and approval of the monitoring plan.

FACILITY	CATEGORY	FINDINGS
HD001 - HYDRONEUMATIC TANK	Finished Water Storage	The hydropneumatic tank is equipped with a threaded sampling tap. The hydropneumatic tank must be equipped with a smooth-nosed sampling tap to facilitate bacteriological and chemical analyses, when needed.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	The overflow pipe for the ground storage tank is not screened inside of the flapper valve. The overflow pipe must be screened with 24 mesh non-corrodible screen to provide protection from contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1041006-003 - WELL NO. 3	Source	At the time of inspection, the well was inactive for maintenance. The pressure gauge assembly was removed and an opening was present leading to the well casing. Replace the pressure gauge assembly to eliminate the pathway for potential contamination.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the system did not have the 2018 Consumer Confidence Report available for review. Send a copy of the 2018 report to the Region 8 office.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the system did not have the means to calibrate their chlorine test equipment but roughly once or twice a year. Chlorine meters should be calibrated periodically according to manufacturer's recommendations to ensure the accuracy of the chlorine readings. Please acquire a calibration kit and calibrate the chlorine meter according to the manufacturer's recommended procedure and frequency.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	<p>During the time of inspection, there were several areas around the elevated storage tank where standing water had collected from the recent rain. Sites should be graded properly so that rain and other discharge should drain away from the site and prevent surface water from standing within 50 feet. Fill in the low areas so the site is properly graded to drain effectively.</p> <p>The pressure gauge on the elevated tank was broken or in poor repair. Replace the pressure gauge on the elevated tank.</p>
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED	Finished Water Storage	<p>During the time of inspection, there were several areas around the elevated storage tank where standing water had collected from the recent rain. Sites should be graded properly so that rain and other discharge should drain away from the site and prevent surface water from standing within 50 feet. Fill in the low areas so the site is properly graded to drain effectively.</p> <p>The pressure gauge on the elevated tank was broken or in poor repair. Replace the pressure gauge on the elevated tank.</p>
FACILITY	CATEGORY	FINDINGS
EL003 - ELEVATED	Finished Water Storage	At the time of inspection, there was a small area of soil erosion leading underneath the base of the elevated tank near the tank inlet. This area and future erosion could cause stability and/or foundation issues in the future. Fill in the area to prevent further erosion and standing water within 50 feet of the elevated tank.
FACILITY	CATEGORY	FINDINGS
1041006-002 - WELL NO. 2	Source	<p>At the time of inspection, the well discharge piping appeared to have several areas of flaking paint. Paint protects the well discharge piping from pitting, corrosion, and future leaks. Clean and paint the well discharge piping.</p> <p>The pressure gauge on the well discharge piping was broken. Install a working pressure gauge upstream of the check valve. 40 CFR 141.403 and TSS 3.2.7.3.a.4 - The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point</p>

		where positive pressure is maintained.
FACILITY	CATEGORY	FINDINGS
1041006-003 - WELL NO. 3	Source	At the time of inspection, the well discharge piping appeared to have several areas of flaking paint. Paint protects the well discharge piping from pitting, corrosion, and future leaks. Clean and paint the well discharge piping.
FACILITY	CATEGORY	FINDINGS
1041006-004 - WELL NO. 4	Source	At the time of inspection, the well discharge piping appeared to have several areas of flaking paint. Paint protects the well discharge piping from pitting, corrosion, and future leaks. Clean and paint the well discharge piping.
FACILITY	CATEGORY	FINDINGS
1041006-005 - WELL NO. 5	Source	At the time of inspection, the well discharge piping appeared to have several areas of flaking paint. Paint protects the well discharge piping from pitting, corrosion, and future leaks. Clean and paint the well discharge piping.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was noted during the sanitary survey that the water system did not compare monthly water production to water sold to estimate monthly water loss. Analysis of water loss is important to quantify leaks in the distribution system or other inferences.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was noted during the sanitary survey that the water system did not keep a customer complaint log. Effective August 1, 2018, community water systems are required by Act 292 to establish and maintain records of customer complaints. The aspects of the log include time and date of the complaint, location, the name of the customer or user, a brief description, and the corrective actions implemented to resolve

		the complaint. These records must be maintained by the water system for a minimum of 5 years and must be made available for review by LDH upon request. These records can be vital to identify problem areas in your distribution system. They can also support efforts to seek funding for various issues that may plague the water system.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL001 - ELEVATED	Finished Water Storage	This office recommends that all tanks be cleaned and inspected on a 3 to 5 year schedule.

### **Written Response Required**

FRANKLIN Parish

Dear Mr. Womack:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 14, 2018 sanitary survey inspection of the public water supply system for SOUTH BAYOU MACON WS (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

No observations were recorded in this category.

**Significant Deficiencies**

No observations were recorded in this category.

**Deficiencies**

No observations were recorded in this category.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Written Response Required**

Re: Class I Sanitary Survey  
TURKEY CREEK WATER SYSTEM Public Water System  
PWS ID LA1041012  
FRANKLIN Parish

Dear Mr. McGuffee:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 14, 2018 sanitary survey inspection of the public water supply system for TURKEY CREEK WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1041012-004 - WELL #4 - SOUTHEAST WELL	Source	The well must be properly plugged and abandoned.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	An approved chemical laboratory/drinking water shall ensure that records and reports are satisfactorily maintained and retrievable. Copies of records and reports for any off-site approved chemical laboratory/drinking water shall be filed in a folder identifying the public water system by name as well as is public water system identification number (PWS ID #).
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	he accuracy of bench top spectrophotometers/colorimeters used for disinfectant residual monitoring, particularly for validation of continuous disinfectant residual monitors, shall be determined at a frequency of no less than once every 90 days by use of a NIST traceable standard solution which has been obtained from an approved source (e.g., certificate of analysis by manufacturer). Deviations of + or - 10 percent or more shall be cause for calibration of the equipment. The instruments shall be calibrated in accord with the manufacturer's instructions. After calibration the instrument's accuracy shall be validated prior to return to service.
FACILITY	CATEGORY	FINDINGS
1041012-001 - WELL #1 - NORTHEAST WELL	Source	The casing must be provided with a vent.
FACILITY	CATEGORY	FINDINGS
1041012-003 - WELL #3 - SOUTHWEST WELL	Source	The casing must be provided with a vent.
FACILITY	CATEGORY	FINDINGS
1041012-002 - WELL #2 - NORTHWEST WELL	Source	The casing must be provided with a vent.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observation made at the time of the inspection has the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendation be addressed to maintain compliance with primary drinking water regulations.

*In accordance with the provisions found in LA ACT No. 292, PWS shall maintain a record of each complaint it receives by telephone, letter, or electronic mail from customers or users. The record of each complaint shall include the date the complaint was received, the service connection to which the complaint relates, the name of the customer or user making the complaint and associated contact information, and a brief description of the complaint. The log containing the record shall also include documentation of corrective actions that PWS has implemented with respect to the matters detailed in the complaint. PWS shall retain the complaint records for at least five years, and shall make the records available to the Louisiana Department*

*of Health upon request and without charge. Within 60 days of receipt of this survey develop and implement a complaint log.*

**Written Response Required**

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water system was unable to provide the chemical analyses for the method of treatment using Zinc Orthophosphate as a corrosion inhibitor. All public water systems must use an approved chemical laboratory to perform all required chemical analyses using approved laboratory methodologies. Review the required instruction at <a href="http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf">http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf</a> and complete the required form located at <a href="http://ldh.la.gov/index.cfm/page/963">http://ldh.la.gov/index.cfm/page/963</a> under the heading "Approved Laboratory Form (Instructions)".
FACILITY	CATEGORY	FINDINGS
DS0950 Distribution System	Distribution System	The chemical Zinc Orthophosphate and Potassium Permanganate solution tanks do not demonstrate proper protection against backflow events. The chemical solution tanks shall be properly protected from backflow as required by the reviewing authority. Install an atmospheric vacuum breaker on the hose bibs supplying the water to the solution tanks and maintain an approved air gap between the water supply hose and the rim of the solution tank.
FACILITY	CATEGORY	FINDINGS
1045002-003 Well #3 (North Well @ Well Site)	Source	The area around the well is wet due to excessive discharge from the well. The discharge from the well needs to be addressed.
FACILITY	CATEGORY	FINDINGS
1045002-002 Well #2 (South Well @ Old Plant)	Source	The well is currently inactive and has not been plugged and abandoned. All wells that are not being used as a source of water must be properly plugged and abandoned in accordance with all of Louisiana's applicable standards, rules and regulations. Upon completion, provide written documentation to LDH stating that the well has been properly plugged and abandoned.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
PF001 Transfer Pumps	Pump/Pumping Facility and Control	The pump used to transfer the treated effluent from clarifier #3 to the ground storage tanks has a leak. All piping and appurtenances for the pump must have watertight joints. Repair the leak to eliminate the ponding water and to protect against a possible source of contamination.
FACILITY	CATEGORY	FINDINGS
PF003 Service Pumps	Pump/Pumping Facility and Control	The sanitary seal for the backwash pump piping is damaged. All piping and appurtenances for pumps must be constructed of watertight joints. Replace the sanitary seal on the backwash pump piping to eliminate the ponding water and to protect against a possible source of contamination.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR003 Ground Storage Tank #3	Finished Water Storage	From review, the finished water ground storage tank should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the ground storage tank's interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the ground storage tank could benefit from an inspection.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR004 Ground Storage Tank #4	Finished Water Storage	From review, the finished water ground storage tank should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the ground storage tank's interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the ground storage tank could benefit from an inspection.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR003 Ground Storage Tank #3	Finished Water Storage	The overflow for the ground storage tank does not discharge over a splash plate or drainage inlet structure. The discharge must discharge over a splash plate or drainage inlet structure to prevent erosion around the foundation of the tank that could comprise the structural integrity of the tank.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
GR003 Ground Storage Tank #3	Finished Water Storage	The screen for the ground storage overflow pipe is damaged. The overflow pipe must be screened with a twenty-four mesh, non-corrodible screen. Replace the damaged screen to provide sanitary protection at all times.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	The water system currently uses Zinc Orthophosphate (TMB-439) as an inhibitor for corrosion control. All public water systems that use orthophosphates for treatment must have test equipment capable of monitoring and measuring the dosage and total phosphate. The total phosphate applied shall not exceed 10 mg/L measured as PO <sub>4</sub> . Obtain adequate testing equipment and begin monitoring the dosage to insure that the total phosphate does not exceed this limit.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	There is no secondary containment provided for two (2) of the chemicals being used for water treatment. Secondary containment must be provided for all liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment for the Potassium Permanganate chemical storage tank and for all three (3) of the Polyacrylamide chemical storage tanks with sufficient containment volumes.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1045002-003 Well #3 (North Well @ Well Site)	Source	The screening on the air release-vacuum relief valves are broken. The air release-vacuum relief valves must be covered with a 24 mesh, corrosion resistant screen. Replace the air relief valve screens to prevent the entrance of contaminants.

FACILITY	CATEGORY	FINDINGS
1045002-004 Well #4 (South Well @ Well Site)	Source	The well's casing vent piping and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's casing vent piping and the steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's casing vent piping and the steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1045002-003 Well #3 (North Well @ Well Site)	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 Treatment Plant	Treatment	1-ton or larger containers of chlorine gas are not properly protected from direct sunlight. 1-ton or larger containers of chlorine gas must be properly protected from direct sunlight. A complete enclosure is not required.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Hayden K. Keigley, P.E.  
825 Kaliste Saloom Road  
Brandywine 3, Suite 100  
Lafayette, LA 70508

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

**No other violations were reported in the past year.**

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at (337) 262-5634.

Respectfully,

Hayden K. Keigley, P.E.

Re: Class I Sanitary Survey  
CITY of JEANERETTE WATER SYSTEM Public Water System  
PWS ID LA1045004  
IBERIA Parish

Dear Mayor Foulcard:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the November 9, 2018 sanitary survey inspection of the public water supply system for CITY of JEANERETTE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

No unresolved observations were recorded in this category.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The current Monitoring Plan for the water system needs to be updated. TCR-001 needs to be changed to an MRT site. MRT-013 needs to be changed to a TCR site. Update and resubmit the Monitoring Plan for LDH review and approval. The Monitoring Plan Portal for the public water system can be found on LDHs website using the following link: <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a> Please call 1-337-475-3214, if assistance is needed.
FACILITY	CATEGORY	FINDINGS
Management	Other	1. The steel overflow piping is dangling without support near one of the foundational supports for the elevated tower. There is great concern that the weight of this pipe without support will break free and cause damage to the elevated tower. The overflow discharge from this pipe is also concerning since it swings away from the splash pad where overflow must be properly received. 2. There are no suitable taps in the distribution system for sample collection. Locations have been approved by LDH for sample collection. All sample taps must be installed in the distribution system on the public water main. The tap must not be subject to operation based on active or inactive accounts with the water system. To facilitate proper sample collection, there must be at least 12 inches of clearance below the nozzle of the tap(s). This includes the distance above grass or weeds. Contact OPH Region Engineering Service staff for assistance, as needed. The installation of these sample taps can carry an independent violation for the water system. Additional written notice has been provided. Immediate action is needed.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been enforcing the CCCP and there were no current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering

		troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers, and current annual test reports for all customers with backflow preventers.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The valve pit at elevated tower location is flooded with water of a questionable quality. The valve pit should remain covered and drained on a routine basis. Devices may be installed to keep the pit dry and free from possible sources of contamination and corrosion. There is piping reflective of a previously installed dedicated means for removing water from the pit. This arrangement appears to be in disrepair.
FACILITY	CATEGORY	FINDINGS
1045004-007 - WELL #10 - WEST	Source	The screening for the well's casing vent is broken. The well casing vent must be covered with a 24 mesh corrosion resistant screen. Replace the well casing vent screen to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1045004-006 - WELL #9 - SOUTH	Source	The wiring entering the casing seal creates a void space around the wire that is visible on top of the steel casing plate. The void exists where the wire passes through the steel plate. The current casing seal has a void space that provides for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the void in the casing seal to prevent bacteriological contamination.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. (Please make a daily check at the newly established POE near the water plant fence.) A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. (Please continue to make daily checks at 9407 West Old Spanish Trail.) An additional chlorine residual checks must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. (Please make monthly checks at 515 Louisiana Street and 712 Wattigny Street.) These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved

		locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region (4) office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	There are no suitable taps in the distribution system for sample collection. Locations have been approved by LDH for sample collection. All sample taps must be installed in the distribution system on the public water main. The tap must not be subject to operation based on active or inactive accounts with the water system. To facilitate proper sample collection, there must be at least 12 inches of clearance below the nozzle of the tap(s). This includes the distance above grass or weeds. Contact OPH Region Engineering Service staff for assistance, as needed. The installation of these sample taps can carry an independent violation for the water system. Additional written notice has been provided. Immediate action is needed.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	From review, the finished water storage facility (elevated tower) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facility could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
GR004 - GROUND STORAGE - SOUTH	Finished Water Storage	The finished water storage facility (ground storage tank) is not equipped with an approved sample tap. The sample tap is broken off the tank. The broken port also supported a pressure gauge for the tank. The finished water storage facility must be equipped with a smooth-nosed sampling tap. Install an approved tap on the (ground storage tank) in a downturned direction to facilitate the collection of water samples for bacteriological and chemical analyses, when needed.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	The splash plate for the elevated tower's overflow is not effective and does not allow for appropriate discharge of the tower's overflow with proper drainage away from the tower's foundation. The understanding of the splash pad must be expanded. Proper grading around the established splash pad from the tower's foundation is needed to prevent erosion that could compromise the structural integrity of the tower.
FACILITY	CATEGORY	FINDINGS
TP004 - PELLERIN TREATMENT PLANT	Treatment	The secondary containment area for the brine tanks is filled with water. The secondary containment area must be managed to allow for adequate drainage and collection of spillage, when needed.

FACILITY	CATEGORY	FINDINGS
TP004 - PELLERIN TREATMENT PLANT	Treatment	There is no secondary containment provided for potassium permanganate being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment with a sufficient containment volume for the potassium permanganate feed tank. (This statement reflects the condition in both treatment trains.)
FACILITY	CATEGORY	FINDINGS
1045004-006 - WELL #9 - SOUTH	Source	1. The well's discharge piping discharges into a storm drain inlet that does not have a proper air gap. An air gap of 2 times the diameter of the pipe is required to protect against the possibility of contamination. 2. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1045004-006 - WELL #9 - SOUTH	Source	A pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1045004-007 - WELL #10 - WEST	Source	A pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1045004-008 - WELL #11 - NORTH	Source	A pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1045004-007 - WELL #10 - WEST	Source	The air release-vacuum relief valve piping is broken, when the pipe union meets the device. The air release-vacuum relief valve piping must be repaired/replaced and covered with a 24 mesh corrosion resistant screen.

FACILITY	CATEGORY	FINDINGS
1045004-007 - WELL #10 - WEST	Source	The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1045004-008 - WELL #11 - NORTH	Source	The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP004 - PELLERIN TREATMENT PLANT	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized. The water system currently uses automatic switch over between 2 - 150 lb. gas cylinders to guarantee continuous disinfection.
FACILITY	CATEGORY	FINDINGS
1045004-008 - WELL #11 - NORTH	Source	A pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.

Act No. 292 became effective on August 1, 2018 and provides requirements for community water systems with respect to customer complaints and flushing programs. It can be viewed at <http://www.legis.la.gov/legis/ViewDocument.aspx?d=1099847>

Currently, the City of Jeanerette does not appear to have an effective record keeping showing compliance with the provisions of Act No. 292. In accordance with the provisions found in Act No. 292, public water system shall maintain a record of each complaint received by telephone, letter, or electronic mail from customers or users. The record of each complaint shall include the date the complaint was received, the service connection to which the complaint relates the name of the customer or user making the complaint and associated contact information, and a brief description of the complaint. The log containing the record shall also include documentation of corrective actions that the public water system has implemented with respect to the matters detailed in the complaint. Public water system shall retain the complaint records for at least five years, and shall make the records available to the Louisiana Department of Health upon request and without charge. Within 60 days of receipt of this survey develop and implement a complaint log process.

### Written Response Required

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Steven R. Joubert, P.E.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

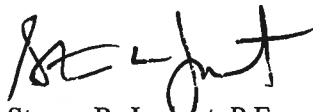

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

Violation Number	Violation Date	Violation Type	Compliance Period
4004719	09/21/2018	INADEQUATE MIN CHLORINE RESIDUAL(GW&SW)	09/01/2018 - 09/30/2018

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3214.

Respectfully,

## **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

**No unresolved observations were recorded in this category.**

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	EL002 has a small leak under the bowl of the elevated tower. A few drops were observed while onsite. Based on discussions, work is scheduled to repair this issue. The water tower must be free of any leaks.
FACILITY	CATEGORY	FINDINGS
Management	Other	The piping in the pump room at the Airport Plant is severely corroded. There are leaks from the control valves. The piping must be cleaned, treated, and painted to resist further corrosion and deterioration that could lead to a potential source of contamination. Some of the piping in the area maybe passed the point of treating and painting.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The valve at the Airport Plant location is flooded with water of a questionable quality. The valve pit should remain covered and drained on a routine basis. Devices may be installed to keep the pit dry and free from possible sources of contamination and corrosion.
FACILITY	CATEGORY	FINDINGS
1045009-004 - WELL #8 - MAIN STREET PLANT BY FILTERS	Source	The casing vent piping for the well is not terminating in the proper orientation. The casing vent piping must be covered with a 24 mesh corrosion resistant screen and terminate in a down turned position to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1045009-013 - WELL #13 - SOUTH LANDRY STREET	Source	The well has a significant leak. The leak has been documented by the water system and added to a punchlist of items to be addressed by the contractor, since this is a recently completed well. The well must be free of leaks that serve as a pathway for contamination of the water being produced.
FACILITY	CATEGORY	FINDINGS
1045009-005 - WELL #9 - WASHINGTON AND CHESTNUT	Source	The well has an existing cracked slab. The well shall be provided with a watertight cover constructed of concrete at least 4 inches thick and 2.5 feet in all directions. The cover must be graded to drain away from casing. Repair or replace the cracked concrete slab to prevent any potential contamination into the well.

FACILITY	CATEGORY	FINDINGS
1045009-009 - WELL #4A - FULTON STREET, RIGHT OF BLDG	Source	The well is equipped with a smooth nosed sampling tap. The tap is stained and/or corroded. Install a new smooth nosed sampling tap or clean the existing sample tap to facilitate the collection of water samples.
FACILITY	CATEGORY	FINDINGS
1045009-003 - WELL #7 - BY GENERATOR BUILDING	Source	There is a piped connection with a hose bib partially buried in dirt near the base of the well slab. The connection in its current states present a risk to the well discharge piping. Remove the connection or modify it such that it has the proper orientation and separation for the soil and/or ponding water.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
PF006 - AIRPORT SERVICE PUMPS	Pump/pumping facility and control	The piping in the pump room at the Airport Plant is severely corroded. There are leaks noted from the control valves. The piping and valves must be watertight. The piping must be cleaned, treated, and painted to resist further corrosion and deterioration that could lead to a potential source of contamination. Some of the piping in the area maybe passed the point of treating and painting. All leaks in this area must be repaired.
FACILITY	CATEGORY	FINDINGS
GR002 - AIRPORT - NORTH	Finished Water Storage	The area around the storage tank has evidence of ponding water. These void spaces near the foundation of the tank appear to be the result of improperly directed discharge from the leaking overflow pipe. This area around the tank within 50 feet must be well drained and graded to facilitate the rapid removal away from the storage tank. The ponding water presents a potential source of contamination and could potentially compromise the integrity of the structure.
FACILITY	CATEGORY	FINDINGS
GR003 - AIRPORT - SOUTH	Finished Water Storage	The area around the storage tank has evidence of ponding water. These void spaces near the foundation of the tank appear to be the result of improperly directed discharge from the leaking overflow pipe. This area around the tank within 50 feet must be well drained and graded to facilitate the rapid removal away from the storage tank. The ponding water presents a potential source of contamination and could potentially compromise the integrity of the structure.
FACILITY	CATEGORY	FINDINGS
GR002 - AIRPORT - NORTH	Finished Water Storage	The overflow piping for the ground storage tank has a crack, near the base of the tank, where water was observed leaking during the tank's overflow. The overflow piping for the ground storage tank must be repaired.

FACILITY	CATEGORY	FINDINGS
GR003 - AIRPORT - SOUTH	Finished Water Storage	The overflow piping for the ground storage tank has a crack, near the base of the tank, where water was observed leaking during the tank's overflow. The overflow piping for the ground storage tank must be repaired.
FACILITY	CATEGORY	FINDINGS
GR002 - AIRPORT - NORTH	Finished Water Storage	The overflow piping has a direct tie to subsurface drainage that end in a discharge point below the receiving rim of a neighboring canal. The location of the overflow discharge pipe is very near the water surface elevation and has the potential to be submerged during high rain events. The overflow piping for all ground storage tanks must have a visible discharge over a splash pad or drainage inlet between an elevation of 12 and 24 inches. Modify the discharge piping to conform to the overflow requirements.
FACILITY	CATEGORY	FINDINGS
GR003 - AIRPORT - SOUTH	Finished Water Storage	The overflow piping has a direct tie to subsurface drainage that end in a discharge point below the receiving rim of a neighboring canal. The location of the overflow discharge pipe is very near the water surface elevation and has the potential to be submerged during high rain events. The overflow piping for all ground storage tanks must have a visible discharge over a splash pad or drainage inlet between an elevation of 12 and 24 inches. Modify the discharge piping to conform to the overflow requirements.
FACILITY	CATEGORY	FINDINGS
EL004 - ELEVATED TOWER CALHOUN ST	Finished Water Storage	The splash plate for the elevated tower's overflow is not effective and does not allow for appropriate discharge of the tower's overflow with proper drainage away from the tower's foundation. The understanding of the splash pad must be expanded. Proper grading around the established splash pad from the tower's foundation is needed to prevent erosion that could compromise the structural integrity of the tower.
FACILITY	CATEGORY	FINDINGS
EL002 - ELEVATED TOWER LOMBARD ST	Finished Water Storage	The splash plate for the elevated tower's overflow is not effective and does not allow for appropriate discharge of the tower's overflow with proper drainage away from the tower's foundation. The understanding of the splash pad must be expanded. Proper grading around the established splash pad from the tower's foundation is needed to prevent erosion that could compromise the structural integrity of the tower.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER LEWIS ST	Finished Water Storage	The splash plate for the elevated tower's overflow is not effective and does not allow for appropriate discharge of the tower's overflow with proper drainage away from the tower's foundation. The understanding of the splash pad must be expanded. Proper grading around the established splash pad from the tower's foundation is needed to prevent erosion that could compromise the structural integrity of the tower.

FACILITY	CATEGORY	FINDINGS
EL003 - ELEVATED TOWER JULIA ST	Finished Water Storage	The splash plate for the elevated tower's overflow is not effective and does not allow for appropriate discharge of the tower's overflow with proper drainage away from the tower's foundation. The understanding of the splash pad must be expanded. Proper grading around the established splash pad from the tower's foundation is needed to prevent erosion that could compromise the structural integrity of the tower.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT - MAIN PLANT	Treatment	1. There is no secondary containment provided for CARUS 2450 being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment with a sufficient containment volume for the phosphate tank. 2. The chemical feed tanks currently does not have any level markings. Level indicators are required for use with chemical feed and storage tanks. Please provide a means to measure or quantify the chemical available within the tank at any given time.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT - MAIN PLANT	Treatment	The chemical (for Carus 2450) solution tank(s) do not demonstrate proper protection against backflow events. The chemical solution tank(s) shall be properly protected from backflow as required by the reviewing authority. The hose for water addition cannot reside in the tank. Install an atmospheric vacuum breaker on the hose bib supplying the water to the solution tank and maintain an approved air gap between the water supply hose and the rim of the solution tank.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT - MAIN PLANT	Treatment	The chemical feed tank for CARUS 2450 is not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
FACILITY	CATEGORY	FINDINGS
TP003 - TREATMENT PLANT AT EL005	Treatment	The chemical feed tanks are not properly labeled. The chemical feed tanks must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tanks.
FACILITY	CATEGORY	FINDINGS
1045009-013 - WELL #13 - SOUTH LANDRY ST.	Source	The air release-vacuum relief valve piping is not covered by a 24 mesh corrosion resistant screen. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1045009-005 - WELL #9 - WASHINGTON AND CHESTNUT	Source	The exhaust/relief piping for the air release-vacuum relief valve is screened, but the screening is partially blocked by paint. The relief piping must be covered with a 24 mesh corrosion resistant screen. Replace the current screening on the relief piping with a 24 mesh, non-corrodible screen to protect against potential entrance of contaminants.

FACILITY	CATEGORY	FINDINGS
1045009-009 - WELL #4A - FULTON STREET, RGT OF BLDG	Source	The well discharge piping and sample tap are showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
1045009-003 - WELL #7 - BY GENERATOR BUILDING	Source	The well is not equipped with a casing vent. The orifice that seems to be supportive of venting and/or drawdown measurements is plugged. The well must be equipped with a downturned casing vent with appropriate non-corrodible, 24 mesh screening. It must be installed at a minimum height of 12 inches above the grade or floor and must have a minimum diameter of 1-1/2 inches.
FACILITY	CATEGORY	FINDINGS
1045009-002 - WELL #6 - BEHIND FULTON STREET TANK	Source	The well is not equipped with a casing vent. The well must be equipped with a downturned casing vent with appropriate non-corrodible, 24 mesh screening. It must be installed at a minimum height of 12 inches above the grade or floor and must have a minimum diameter of 1-1/2 inches.
FACILITY	CATEGORY	FINDINGS
1045009-003 - WELL #7 - BY GENERATOR BUILDING	Source	The well's outer casing (heavy corrosion), casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1045009-008 - WELL #11 - LOMBARD STREET	Source	The well's outer casing, casing vent piping, discharge piping, and/or steel base plate used to support the pump are showing signs of heavy staining and flaky painting. The well's outer casing, casing vent piping, discharge piping, and/or steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

Please make this adjustment as soon as possible.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT - MAIN PLANT	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. The tap will be placed on the discharge header from GR005 downstream of all pumps. This location was discussed during the sanitary survey. This task must be completed prior to the next POE sampling event by LDH. If not completed in a timely fashion, the water system could receive a monitoring violation that requires public notice to all customers. Please contact me directly (1-337-475-3214), if additional time is needed.

From review, some of the finished water storage facilities (elevated tower, ground storage tank or hydropneumatic tank) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of all of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facility could benefit from an inspection.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Steven R. Joubert, P.E.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

Violation Number	Violation Date	Violation Type	Compliance Period
368	06/18/2018	INADEQUATE MIN CHLORINE RESIDUAL(GW&SW)	06/01/2018 - 06/30/2018

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3214.

Respectfully,

Steven R. Joubert, P.E.

Re: Class I Sanitary Survey  
Port East Subdivision (TESI)  
PWS ID #: LA 1045037  
Iberia Parish

Dear Ms. Davidson:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 24, 2018 sanitary survey inspection of the public water supply system for Port East Subdivision (TESI). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Hayden K. Keigley	LDH/OPH Region 4 Engineering
Steven R. Joubert	LDH/OPH District 3 Engineering
Cliff Langley	Total Environmental Solutions, Inc.

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

No unresolved observations were recorded in this category.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
1045037-001 Well #1 (South Well)	Source	The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the casing seal to prevent bacteriological contamination.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
HD001 Hydropneumatic Tank	Finished Water Storage	From review, the hydropneumatic tank must be inspected and repaired. One of the saddle supports is severely corroded and is buckling. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facility could benefit from an inspection. Repair or replace the saddle supporting the hydropneumatic tank to eliminate potential future structural failure.
FACILITY	CATEGORY	FINDINGS
1045037-001 Well #1 (South Well)	Source	The pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1045037-002 Well #2 (North Well)	Source	The pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	The water system is currently not disinfecting the water being produced. Disinfection is mandatory and must be provided for all public water systems. The chemical solution tank and chemical injection pump must be connected, functioning properly and operable at all times to provide for continuous disinfection.
FACILITY	CATEGORY	FINDINGS
1045039-001 - WELL #1	Source	The well's casing vent is not covered by a 24 mesh, corrosion-resistant screen and the well's casing is unsealed. The well's casing vent must be covered by a 24 mesh, corrosion-resistant screen and the well must have an adequate casing seal to prevent the entrance of contaminants into the well's casing. Furthermore, the well's outer casing is showing signs of rusting and corrosion and there is a leak in the discharge piping exiting the well casing. The well's discharge piping must be repaired and the well's outer casing must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat, and paint the well's outer casing to prevent sources of potential contamination.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological and chemical test result reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, the test results were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L

		is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system representative was not able to retrieve records or provide evidence of sufficient maintenance or breadth of record keeping. An approved drinking water system must ensure that records and reports are satisfactorily maintained and retrievable. Copies of records and reports for any drinking water system shall be filed in folders identifying the public water system by name as well as public water system identification number (PWS ID #) and shall be made available for review upon request by the state health officer. It is strongly recommended that the water system begin filing documentation (e.g. lab reports, correspondences, etc.) separately and in chronological order for the following categories: Daily Operating Reports, LDH-Approved Chlorine Residual Reports, Bacteriological Sampling Results, Chemical Sampling Results, Cross Connection Control Policy /Backflow Prevention Test Reports, Miscellaneous. Feel free to contact this office at (337) 262-5746 to further discuss fulfilling these requirements.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The chemical feed tank is not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
FACILITY	CATEGORY	FINDINGS
1045039-001 - WELL #1	Source	The well's discharge piping is not equipped with a pressure gauge or a flow-measuring device. A pressure gauge and a means for measuring flow must be provided. Install a device or monitoring methods to measure flow from the well and a pressure gauge on the well's discharge piping upstream of the check valve to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	A hose bib with a hose attachment is being used as a flushing station near the MRT tap without the required protection of an installed atmospheric vacuum breaker. Install an atmospheric vacuum breaker on the hose bib.
FACILITY	CATEGORY	FINDINGS
2045066-002 - WELL #2	Source	The casing vent piping for the well is not terminating in the proper orientation and is not covered by a 24 mesh, corrosion resistant screen. The casing vent piping must terminate in a down turned position and must be covered with a 24-mesh corrosion, resistant screen, to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
2045066-002 - WELL #2	Source	The well is equipped with an inoperable smooth nosed sampling tap. The tap serves in conjunction with a hose bib, a potential point of water usage. The hose bib represents a point of interference with the quality of samples taken at the well source. Eliminate the potential point of water usage and install a functional smooth nosed sampling tap to facilitate the collection of water samples.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological and chemical test result reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, bacteriological test results after September 2016 were not available for review. Digital reports of bacteriological test results have been emailed to water system staff since September of 2016. The water system must keep a hard copy of these reports on file. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH.

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin recording the daily residual for the POE on the appropriate signed and dated "LDH Approved Chlorine Residual Forms" (Report #1) which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	During the survey, it was apparent that the methods being used by the water system to check daily chlorine residuals were being performed incorrectly and without proper equipment. Personnel should be provided with the required equipment (high range vials) and trained on how to correctly use the equipment that is being used to sample for chlorine residuals.
FACILITY	CATEGORY	FINDINGS
2045066-002 - WELL #2	Source	The well's discharge piping does not appear to be equipped with a means for measuring flow. Install a device or monitoring methods to measure flow from the well and to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP002 - WELL #2 TREATMENT	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. The tap will be placed on a horizontal run of distribution piping leaving the hydropneumatic tank. The pipe leading to the distribution system will be exposed in order for a smooth nosed sample tap to be installed. This task must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Ebenezer Omojola,  
825 Kaliste Saloom Road

Dear Mr. Romero:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 24, 2018 sanitary survey inspection of the public water supply system for CHASES RV PARK WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Hayden K. Keigley	LDH/OPH Region 4 Engineering

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
2045074-001 Well #1 (East Well)	Source	The well is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve and shall terminate in a downward direction. The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap. A minimum clearance of 12 inches must be provided underneath the raw water sampling tap.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
2045074-001 Well #1 (East Well)	Source	The wiring entering the casing seal creates a void. The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the casing seal to prevent bacteriological contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
2045074-002 Well #2 (West Well)	Source	The wiring entering the casing seal creates a void. The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the casing seal to prevent bacteriological contamination.

**Minor Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	System Management and Operation	The electrical wiring for the submersible pumps at both well sites is currently unprotected. All electrical work must conform to the National Electric Code requirements. Provide conduit for the pumps electrical wiring at both well sites with adequate watertight connections at the entrance through the wells casing sanitary seals to eliminate possible contamination into the wells.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
2045074-001 Well #1 (East Well)	Source	The well is not equipped with a casing vent. The well must be equipped with a downturned casing vent with appropriate non-corrodible, 24 mesh screening. It must be installed at a minimum height of 12 inches above the grade or floor and must have a minimum diameter of 1 1/2 inches.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
2045074-002 Well #2 (West Well)	Source	The well is not equipped with a casing vent. The well must be equipped with a downturned casing vent with appropriate non-corrodible, 24 mesh screening. It must be installed at a minimum height of 12 inches above the grade or floor and must have a minimum diameter of 1 1/2 inches.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP002 Treatment Plant 2 (Well #2)	Treatment	The point of entry (POE) site needs to be relocated for proper sampling. The tap needs to be located after all treatment processes, pumps, and storage tanks and prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers.

### **Written Response Required**

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	All RV sites must be equipped with dual check valve assemblies. Please submit a written course of action, for review and approval, which details a timeline for installing the required protection at the RV sites. The specifications for any device to be installed must be submitted for review and approval by this office. Do not make any changes to the existing water system without prior written approval or understanding.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological and chemical test result reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, current bacteriological test results were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.

Office of Public Health • Acadian Region IV

825 Kaliste Saloom Rd • Brandywine 3 • Ste. 100 • Lafayette, Louisiana 70508  
Phone #: 337-262-5311 • Fax #: 337-262-5638 • [www.ldh.la.gov](http://www.ldh.la.gov)

"An Equal Opportunity Employer"

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	During the survey, it was apparent that the procedures used by the water system to check daily chlorine residuals are incorrect. Personnel must review instructional materials on the correct operation of the equipment that is being used to sample for chlorine residuals.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	During the sanitary survey, a free chlorine residual reading of 0.1 mg/L was obtained at the maximum-residence-time sampling site (MRT). This indicates that the minimum free chlorine residual is not being maintained throughout the distribution system. Under the direction of the designated operator, make necessary adjustments to the quantity of disinfection being injected to ensure the proper minimum free chlorine residual of 0.50 mg/L is present throughout the distribution system at all times.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The point-of-entry (POE) sample tap is not smooth-nosed and serves as an RV hookup. The POE sample tap must be smooth nosed, which is suitable for obtaining samples for bacteriological and chemical analysis. A sampling station must not share piping or space with other points of usage that could provide for negative influences and yield sampling results that may not be consistent with water quality. Configure the POE sampling station to support monitoring only without any undue influences.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Ebenezer Omojola,  
825 Kaliste Saloom Road  
Brandywine 3, Suite 100  
Lafayette, LA 70508

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

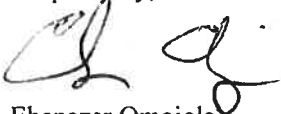

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

Violation Number	Violation Date	Violation Type	Compliance Period
7	12/13/2018	INADEQUATE MIN CHLORINE RESIDUAL(GW&SW)	12/01/2018 - 12/31/2018

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-262-5746.

Respectfully,

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The water system is not under the control and supervision of a duly certified operator. The water system, per population and system design at the time of the survey, must be placed under the supervision and control of a certified operator holding at least level one certifications in the categories of Water Production and Water Distribution. The operator certification office can be reached by phone at (225) 342-7508. The operator certification website is located on LDH's website using the following link: <a href="http://www.dhh.louisiana.gov/index.cfm/page/416">http://www.dhh.louisiana.gov/index.cfm/page/416</a> .
FACILITY	CATEGORY	FINDINGS
Management	Other	The cinder blocks being used as a foundation for the bladder tank are unstable which could lead to potential structural failure. This could result in disconnection of the bladder tank from the water system distribution piping. The foundation for the bladder tank must be reinforced or replaced.
FACILITY	CATEGORY	FINDINGS
Management	Other	The water system is currently not disinfecting the water being produced. Disinfection is mandatory and must be provided for all public water systems. A chlorine solution tank and chemical injection pump must be connected, functioning properly, and operable at all times to provide for continuous disinfection.
FACILITY	CATEGORY	FINDINGS
Management	Security	There is no protective fencing around the well. A fence, capable of being locked, must be constructed around all aspects of the public water supply. The fence shall be resistant to climbing and at least 6 feet high.
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	During the sanitary survey visit, it was noted that the construction of water system infrastructure (i.e. production and storage), requiring a written approval from the state health officer, was started and/or completed without authorization. Please submit to this office signed, stamped, and dated As-Built plans and specifications from a Louisiana licensed professional engineer for review and approval by LDH.
FACILITY	CATEGORY	FINDINGS
Management	System Management	The well and pressure tank for the water system are built at an elevation of 5' in a flood zone with a base flood elevation of 11'. All

	and Operation	critical water supply facilities for community water systems shall be protected to at least the 100-year flood elevation.
FACILITY	CATEGORY	FINDINGS
2045079-001 - WELL #1	Source	The well does not have a concrete cover slab. The well shall have a concrete cover slab of at least 4 inches thick and extend at least 2.5 feet in all directions. The cover slab must be graded to drain away from casing. Install a concrete slab to prevent any potential contamination into the well. Additionally, the casing vent piping for the well is not terminating in the proper orientation. The casing vent piping must be covered with a 24 mesh corrosion resistant screen and terminate in a downturned position to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
2045079-001 - WELL #1	Source	The well is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve and shall terminate in a downward direction. The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap. A minimum clearance of 12 inches must be provided underneath the raw water sample tap.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	A total coliform monitoring plan has not been completed. A total coliform Monitoring Plan must be completed. OPH Region 4 Engineering staff can be reached by phone at (337) 262-5746 about the review and approval of the plan. The water system must complete the required plan by logging into the Monitoring Plan Portal on LDH's website using the following link: <a href="https://www.ldh-mpp.org/">https://www.ldh-mpp.org/</a> .
FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The electrical wiring for the well's submersible pump is currently unprotected. All electrical work must conform to the National Electric Code requirements. Provide conduit for the pumps electrical wiring with an adequate watertight connection at the entrance into the well's casing sanitary seal to eliminate possible contamination into the well.
FACILITY	CATEGORY	FINDINGS
2045079-001 - WELL #1	Source	The well does not currently have an air release-vacuum relief valve installed. The discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a downturned position at least 18 inches above the floor and covered with a 24 mesh, corrosion resistant screen.

Office of Public Health • Acadian Region IV

825 Kaliste Saloom Rd • Brandywine 3 • Ste. 100 • Lafayette, Louisiana 70508  
Phone #: 337-262-5311 • Fax #: 337-262-5638 • [www.ldh.la.gov](http://www.ldh.la.gov)

"An Equal Opportunity Employer"

FACILITY	CATEGORY	FINDINGS
2045079-001 - WELL #1	Source	The well is not equipped with a check valve, a pressure gauge, a means of measuring flow, or a smooth nosed sampling tap located at a point where positive pressure is maintained. A check valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap must be provided. The pressure gauge must be installed on the discharge piping upstream of the check valve as a means to measure the actual operating head conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
VILLAGE of GROSSE TETE WATER SYSTEM Public Water System  
PWS ID LA1047001  
IBERVILLE Parish

Dear Mr. Chauffe:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 30, 2018 sanitary survey inspection of the public water supply system for VILLAGE of GROSSE TETE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### **Parties Present**

<b>Name</b>	<b>Organization</b>
Clark Broussard	Region II Engineering
Kim D Patin	Village Of Grosse Tete
Brian Suberbielle	Region II Engineering

### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

Office of Public Health • Capitol Region II

P.O. Box 4489 • Baton Rouge, Louisiana 70821

Phone #: 225-342-7499 • Fax #: 225-342-7607 • [www.ldh.la.gov](http://www.ldh.la.gov)

"An Equal Opportunity Employer"

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the survey a threaded tap at the point of entry sampling location did not have an approved back flow prevention device installed. Additionally yearly device testing records were incomplete for the system. All devices shall be tested yearly and the records made available upon request of the inspector. <b>See Attachment #2</b>

### Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The sample tap at the point of entry shared a connection with a threaded tap. A smooth-nosed tap for the purpose of collecting samples shall be on a dedicated connection to the distribution center. Removing the threaded tap greatly reduces the probability of contaminating samples taken, and should be done as soon as possible. <b>See Attachment #1</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is recommended that the flushing plan used for the distribution be finalized and formally adopted as a standard procedure for the operation of the water system.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	All potable water systems shall be designed, constructed and maintained so as to prevent leakage of water due to defective materials, improper jointing, corrosion, settling, impacts, freezing, or other causes. Valves and blow-offs shall be provided so that necessary repairs can be made with a minimum interruption of service. During the time of the survey the automatic flushing device near 35055 Richland Road, White Castle, LA 70788 was leaking, it is recommended that the issue be solved as soon as possible.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	All subsurface suction piping, such as that leading from detached wells or reservoirs, shall be protected against the entrance of contamination. During the survey it was noted that the service pumps from the clearwell had openings that could potentially lead to contamination of the finished water. The openings should be sealed to protect the water quality. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
TP004 - SURFACE PLANT - FINISHED WATER	Treatment	Inlet and outlet design shall minimize short-circuiting and destruction of floc, A drain

		and/or pumps shall be provided to handle dewatering and sludge removal. At the time of the survey there appeared to be an issue with the sludge blanket allowing floc to pass through. The root cause should be investigated and repaired in order to allow the clarifier to operate as designed and permitted. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
TP004 - SURFACE PLANT - FINISHED WATER	Treatment	Public water systems which use surface water or ground water under the direct influence of surface water shall meet the requirements of applicable sections of the Interim Enhanced Surface Water Treatment Rule as it pertains to CT and Giardia, Cryptosporidium, and virus removal/inactivation/disinfection requirements. At the time of the survey the ammonia injection was ahead of the chlorine injection point. All CT values are calculated based on adding free chlorine ahead of the ammonia. If this condition is not met, the system must demonstrate, based on on-site studies or other information, as approved by the State, that the system is achieving at least 99.99 percent inactivation of viruses. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
TP003 - HAASE WELL TREATMENT PLANT	Treatment	Slow sand filters shall be operated to waste after scraping or rebedding during a ripening period until the filter effluent turbidity falls to consistently below the regulated drinking water standard established for the system. At the time of the survey the filters were immediately returned to service after being backwashed, in addition to the backwashing duration being determined by the appearance of the wasted water. It is recommended that the

		system implement a backwashing program that addresses these concerns.
--	--	---

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the survey the filter media in the combined groundwater treatment facility had not been inspected or tested for efficacy since its installation over ten years ago. It is recommended that the media be evaluated and replaced if necessary.
FACILITY	CATEGORY	FINDINGS
Management	Other	LA HB894 by Representative Schexnayder became effective 08/01/2018 and provides requirements for community water systems with respect to customer complaints. In Section C of the bill is a requirement for community water systems to implement a demonstrated flushing program where deemed necessary by the state health officer. HB894 can be viewed at <a href="http://www.legis.la.gov/legis/ViewDocument.aspx?d=1099847">http://www.legis.la.gov/legis/ViewDocument.aspx?d=1099847</a> . Iberville is here-by notified that the state health officer has deemed it necessary that Iberville Water System implement a demonstrated flushing program. A properly designed and implemented flushing program is considered to be a valuable tool to significantly improve water quality and increase the reliability of the water distribution system. The flushing program must be documented and periodically evaluated for effectiveness. Of the various types of flushing programs that can be implemented, a unidirectional flushing (UDF) program is preferred where system design allows. UDF is the strategic closing of valves and opening of hydrants to flush one segment of main in a SINGLE DIRECTION (UDF). Higher velocities (> 5 fps is desirable) scour and remove sediment and deposits

		from water mains. Within 60 days of receipt of this survey develop and implement a flushing program.
FACILITY	CATEGORY	FINDINGS
Management	Other	The distribution system appears to be negatively impacted by legacy manganese (Mn). Legacy manganese is manganese which has accumulated in the distribution system over time as sediment or pipe scale. Where present, changes in water quality (ph, ORP, etc.), activities, or hydraulic changes in the distribution system can stir up and/or release legacy manganese causing dirty water complaints and a loss of customer confidence in the utility. Where legacy Mn is an issue the utility's goal should be to achieve the following: Minimize Mn inventory in the distribution system, minimize sources of Mn entering the distribution system, minimize changes to distribution system water chemistry, particularly with respect to pH and ORP, minimize physical and hydraulic disruptions to the distribution system. We recommend that you refer to EPA/Water Research Foundation Legacy of Manganese Accumulation in Water Systems, PDF Report #4314 for guidance in mitigating any legacy manganese that may be present in the distribution system.

Re: Class I Sanitary Survey  
VILLAGE of ROSEDALE WATER SYSTEM Public Water System  
PWS ID LA1047006  
IBERVILLE Parish

Dear Mr. Blanchet:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 30, 2018 sanitary survey inspection of the public water supply system for VILLAGE of ROSEDALE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### **Parties Present**

<b>Name</b>	<b>Organization</b>
Clark Broussard	Region II Engineering
Kim D Patin	Village Of Rosedale
Brian Suberbielle	Region II Engineering

### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

No observations were recorded in this category.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the survey there were two large pieces of debris near the well. Both the large iron pipe by the fence and the plank near the well should be removed from the well yard. <b>See Attachment #3</b>
FACILITY	CATEGORY	FINDINGS
EL001 - ROSEDALE ELEVATED STORAGE TANK	Finished Water Storage	At the time of the survey there was insulation around the smooth-nosed sample tap, it is recommended that the insulation be removed from the nozzle portion to minimize the risk of contaminating samples. <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
TP002 - TREATMENT PLT WELL #2	Treatment	The mesh screen on the tubing vent from the chlorine feeders was damaged at the time of the survey. The screens should be replaced at the earliest opportunity. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
1047006-002 - ROSEDALE WELL 002	Source	A portion of the discharge piping from the well was showing signs of rust and corrosion. The rust and corrosion should be completely removed before the protective coating is reapplied to the piping. <b>See Attachment #2</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be

performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is recommended that the flushing plan used for the distribution be finalized and formally adopted as a standard procedure for the operation of the water system.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Capitol Region II  
Attn: Clark Broussard,  
P. O. Box 4489, Bin #10, Bienville Bldg  
Baton Rouge, Louisiana 70821-4489

The following compliance history is provided for your information

### **Bacteriological Sampling History**

#### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

### **Violation History**

#### **Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

#### **Maximum Contaminant Level (MCL) Violations during the past year**

No maximum contaminant level violations were reported in the past year.

#### **Other Violations during the past year**

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 225-342-7301.

Respectfully,

Re: Class I Sanitary Survey  
NORTH IBERVILLE WATER SYSTEM Public Water System  
PWS ID LA1047024  
IBERVILLE Parish

Dear Mr. Migliacio:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 12, 2018 sanitary survey inspection of the public water supply system for NORTH IBERVILLE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Clark Broussard	LDH OPH Region II Engineering
Jason Guidry	Tesi-Iberville #3

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

Office of Public Health • Capitol Region II

P.O. Box 4489 • Baton Rouge, Louisiana 70821

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

Visit Date	Notify Date	Reason	Severity	Category	Facility
12/09/2015	12/10/2015	Sanitary Survey, Finished	Minor	Finished Water Storage	EL001-ELEV TOWER 001 ROSEDALE TOWER
<b>Comments:</b> No drainage valve was found above ground. According to Operator description, the drainage valve was buried underground, and need to be dugged out when drainage is necessary. Drainage shall be provided and easily be accessed. Grading shall be provide to drain storm water and drainage water away from the foundation and site.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
12/09/2015	12/10/2015	Sanitary Survey, Finished	Minor	Treatment	TP001-TREATMENT PLANT WELL 001
<b>Comments:</b> Louvers for chlorine room are corrosive and cannot be closed when fan stopped.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
12/09/2015	12/10/2015	Sanitary Survey, Finished	Minor	Treatment	TP002-TREATMENT PLANT WELL 002
<b>Comments:</b> Air inlets did not have louvers. Insect might get into the storage room. Louvers should be provided on Air inlet.					

### **Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	During the survey, it was noted that the slab for well 001 had a crack that appeared to travel all the way through the slab. The damage shall be repaired in order to prevent contamination of the aquifer.
FACILITY	CATEGORY	FINDINGS
1047024-001 - IBERVILLE WWKS DIST #4 WELL 001	Source	During the survey it was noted that the sanitary seal on the well casing was in poor condition and is in need of replacement. <b>See Attachment #4</b>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEV TOWER 001 ROSEDALE TOWER	Finished Water Storage	At the time of the survey, the overflow piping for the elevated storage tank was not screened with a four mesh, non-corrodible screen. The screen shall be installed within the overflow pipe at a location least susceptible to damage by vandalism. If a flapper is used, a screen shall be provided inside the valve. <b>See Attachment #1</b>
FACILITY	CATEGORY	FINDINGS
EL001 - ELEV TOWER 001 ROSEDALE TOWER	Finished Water Storage	At the time of the survey, the splash pad for the elevated storage overflow was broken into pieces and was beginning to show signs of erosion. The splash pad shall be replaced after the erosion is mitigated. <b>See Attachment #2</b>
FACILITY	CATEGORY	FINDINGS
EL002 - ELEV TOWER 002 RAMAH TOWER	Finished Water Storage	At the time of the survey, the splash pad for the elevated storage overflow was broken into pieces and was beginning to show signs of erosion. The splash pad shall be replaced after the erosion is mitigated. <b>See Attachment #3</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	During the survey, there were signs of erosion noted around the support for the Roseland tower (EL001). The areas washed out should be filled in to maintain the structural integrity of the storage tower.
FACILITY	CATEGORY	FINDINGS
Management	Other	It is recommended that the system develop, record, and implement a flushing program with standard operating procedures and goals for the program.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT WELL 001	Treatment	At the time of the survey, one of the chlorine cylinders in use was not restrained. All cylinders should be restrained in position to prevent upset. See <b>Attachment #5</b>

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

## Significant Deficiencies

No observations were recorded in this category.

## Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the inspection, the valve for the consecutive connection at the POE was submerged in approximately 6 inches of water. Chambers, pits or manholes containing valves, blow-offs, meters, or other such appurtenances to a distribution system, shall not be located in areas subject to flooding or in areas of high groundwater. The water system shall make provisions for valve box to be protected from flooding or high groundwater <b>See Attachment #4</b>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	During the inspection, the sample taps at TCR-017, located at 5505 Rose Down Ave. and TCR-014, at 1330 Madewood Dr. were observed to have a T connection shared with the flushing assemblies. The MRT-016, located at 5675 Rose Down Ave, also had a sample tap and a flushing assembly in a stacked configuration. Taps should be located directly on the main and must be a minimum of 10 - 12 inches above the ground. The water system shall relocate the sample taps and the MRT on the water main with an approved dedicated connection. <b>See Attachment #2, #3 and #1</b>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is strongly recommended that the water system develop and implement a written flushing program. The water distribution system should be flushed as necessary to reduce stagnant water and sediment build-up. Unidirectional and directional flushing are more effective than spot flushing.

### **Written Response Required**

FACILITY	CATEGORY	FINDINGS
Management	Security	At the time of inspection, there was a hole in the middle of the fence at the Well #1 site where the well wasting pipe used to run through. Fix the hole in the fence and submit documentation to this office when completed.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, the water system was working towards adopting and implementing a Cross Connection Control Program. Send any resulting documentation of the program as it is implemented (city ordinance, survey letters, etc.) to this office. The water system is required to maintain records of the yearly backflow device tests that are conducted by the required customers. If there are any questions or assistance needed, please contact this office by phone or email listed at the end of this letter.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1	Treatment	The chemical feed pump for sodium hexametaphosphate is not secured. The pump should be secured to reduce hazard of chemical spill and equipment failure. The suction line for Potassium Permanganate is not sealed. The suction line should be sealed to avoid entrance of foreign chemicals or objects which could contaminate the chemical supply. The chemical feed pump appeared to have a slight leak on the discharge line. The pump and discharge line should be inspected and/or replaced to eliminate the leak. Submit documentation to this office when completed.
FACILITY	CATEGORY	FINDINGS
TP003 - WELL #3	Treatment	The chemical feed pump for sodium hexametaphosphate is not secured. The pump should be secured to reduce hazard of chemical spill and equipment failure. The suction line for Potassium Permanganate is not sealed. The suction line should be sealed to avoid entrance of foreign chemicals or objects which could contaminate the chemical supply. The chemical feed pump appeared to have a slight leak on the discharge line. The pump and discharge line should be inspected and/or replaced to eliminate the leak. Submit documentation to this office when completed.
FACILITY	CATEGORY	FINDINGS
1049008-001 - WELL #1	Source	The air relief valve piping is leaking. The piping and valve need to be replaced and/or capped on the end to eliminate the potential for contamination. Fix the leak and submit documentation to this office when completed.
FACILITY	CATEGORY	FINDINGS
1049008-001 - WELL #1	Source	There is currently no pressure gauge installed on the discharge piping of the well. A pressure gauge must be installed upstream of the check valve as a means to measure the actual operating head conditions. Install a pressure gauge on the well discharge piping and submit documentation to this office when completed.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services  
Northeast Region VIII  
Attn: Tyler Lollis,  
1650 Desiard St., 2<sup>nd</sup> Floor  
Monroe, Louisiana 71201-6118

The following compliance history is provided for your information

### **Bacteriological Sampling History**

#### **Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

### **Violation History**

#### **Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 318-361-7210 or [Tyler.Lollis@la.gov](mailto:Tyler.Lollis@la.gov).

Respectfully,

Re: Class I Sanitary Survey  
Quitman Water System Public Water System  
PWS ID LA1049014  
Jackson Parish, Louisiana

Dear Mr. Vail:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 31, 2018 sanitary survey inspection of the public water supply system for Quitman Water System (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
11/02/2015	11/25/2015	Sample collection	Minor	Source	1049014-004-WELL NO. 4
<b>Comments:</b> At the time of the inspection, it was noted the screen was in poor repair at well 4 on the hill. Replace screen at air release valve at well 4 on the hill.					

The significant deficiencies listed in the below table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The below noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1049014-004 - WELL NO. 4	Source	The well casing vent screen is broken. The wells casing vent must be covered by a 24 mesh corrosion resistant screen. Replace the well vent screen with a 24 mesh corrosion resistant screen to eliminate the potential for contamination of the well casing, and notify this office once this item is completed.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was noted during inspection of the monthly chlorine residual reports that roughly one or two days per month, the water system fell underneath the required 0.5 ppm of free chlorine in the distribution system and did not log an explanation of the appropriate actions taken. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Please send the Region 8 office a copy of the next three months (November/December 2018 & January 2019) of properly recorded chlorine forms.
FACILITY	CATEGORY	FINDINGS
TP006 - HILLSIDE TREATMENT	Treatment	The light inside the chlorine building was broken. Replace the bulb or wiring so the light is functioning properly.

PLANT (WELL 4)		
FACILITY	CATEGORY	FINDINGS
1049014-003 - WELL NO. 3	Source	The screen on the air release-vacuum relief valve is broken. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screen to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1049014-004 - WELL NO. 4	Source	The screen on the air release-vacuum relief valve is missing. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screen to prevent the entrance of contaminants.
FACILITY	CATEGORY	FINDINGS
1049014-003 - WELL NO. 3	Source	The well pressure gauge is broken. The well discharge piping must be equipped with a working pressure gauge.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was noted during inspection that the water system did not compare monthly water production to water sold to estimate monthly water loss. Analysis of water loss is important to quantify leaks in the distribution system or other inferences.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was noted during inspection that the water system did not have a flushing program. A flushing program is necessary to limit stagnant water and water quality issues within the distribution system, especially in systems with many dead ends in the mains.
FACILITY	CATEGORY	FINDINGS

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Shady Grove Water System  
PWS ID LA1049016  
Jackson Parish, Louisiana

Dear Mr. Emanus:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the July 24, 2018 sanitary survey inspection of the public water supply system for SHADY GROVE WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

Name	Organization
Tyler Lollis	LDH/OPH Engineering Services Region 8
Stephen K Ray	LDH/OPH Engineering Services Region 8
John Culpepper, Sr	Shady Grove Water System

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

Office of Public Health • Northeast Region VIII

1650 Desiard Street • P. O. Box 6118 • Monroe, Louisiana 71211-6118

Phone #: 318-361-7201 • Fax #: 318-362-3163 • [www.ldh.la.gov](http://www.ldh.la.gov)  
"An Equal Opportunity Employer"

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of inspection, the system stated that they did not adopt a Cross Connection Control Program because they do not serve any customers that require the backflow prevention equipment. A survey of the system must be completed to ensure that all customers, residential and commercial, are protected from potentially polluting the distribution system. Critical customers include but are not limited to restaurants, hospitals, schools, funeral homes, jails, churches, farms, customers with swimming pools, private wells, etc. Please provide a written statement to this office of the actions taken to survey the system.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the system did not provide any records of chemical analyses for review. These records shall be maintained by the water system for no less than 10 years. Please submit copies or scans of chemical sampling results (DBP's, Nitrates, Phase 2/5, etc.) to this office at 1650 Desiard Street, 2nd Floor, P.O. Box 6118, Monroe, LA 71211-6118, by fax to 318-362-3163, or by email to D4Safe.Water@la.gov.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, it was noted that roughly one day a month, the chlorine residual reading was not monitored without an explanation. Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Please send the Region 8 office a copy of the next three (3) months of properly recorded, chlorine residual forms by the 10th day of the following month.
FACILITY	CATEGORY	FINDINGS
TP001 - WELL #1	Treatment	At the time of inspection, automatic switch-over was not provided at the treatment facility. Install automatic switch-over of the chlorine cylinders to assure continuous disinfection.
FACILITY	CATEGORY	FINDINGS
1049016-001 - WELL #1	Source	There is currently no pressure gauge installed on the discharge piping of the well. A pressure gauge must be installed on the discharge piping upstream of the check valve as a means to measure the actual operating head conditions. Install a pressure gauge on the well discharge piping to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Re: Class I Sanitary Survey  
Eros Community Water System  
PWS ID LA1049022  
Jackson Parish

Dear Ms. Waggoner:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 28, 2018 sanitary survey inspection of the public water supply system for Eros Community Water System (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### **Parties Present**

##### **Name**

James Soileau  
Tyler Lollis  
Tom L Owens

##### **Organization**

LDH-OPH Region 7 Engineering Services  
LDH-OPH Engineering Region 8  
G & O Service Company

#### **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There was a leak in the chlorination house at well #2. This leak shall be sealed as to prevent the entrance of harmful contaminants into the distribution system. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	There was no screen on the overflow piping at the time of the inspection. A 24-mesh screen shall be installed to prevent the entrance of any contaminants into the stand pipe. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material.
FACILITY	CATEGORY	FINDINGS
1049022-001 - WELL #1	Source	There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping. There was a hole in the well casing seal. There was no screen on the air release valve. The seal on well #1 shall be repaired and the air release valve shall have a 24-mesh screen installed to prevent the entrance of any contaminants into the well casing.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The Monthly Chorine Reports show that daily monitoring is not being performed on Sundays. The water system must check the chorine residuals daily to ensure adequate monitoring is being conducted at the water system.
Management	M&R and Data Verification	Complete daily records of the operation of a public water system, including reports of laboratory control tests, shall be kept and retained as prescribed in the National Primary Drinking Water Regulations on forms approved by the state health officer. When specifically requested by the state health officer or required by other requirements of this Part, copies of these records shall be provided to the office designated by the state health officer within 10 days following the end of each calendar month. Additionally, all such records shall be made available for review during inspections/sanitary surveys performed by the state health officer. There was an entire month of the daily chlorine monitoring where the chlorine levels were 2.20 exactly almost every day of the month. This indicates that the chlorimeter needed to be set to high range. The operator on duty should be knowledgeable on the workings of the chlorimeter used.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP002 - WELL #2	Treatment	The treatment plant for well #2 was in a very degraded state. The fan and light were both broken, the door on the chlorine house was detached and did not lock properly. The light and fan should be replaced, and the door shall be brought back to working order. Adequate housing must be provided for the chlorination equipment and for storing the chlorine.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	There was no screen on the overflow pipe at the time of inspection. A 24-mesh screen shall be provided on the overflow piping. There was also an old level gauge that was discontinued and was not properly sealed. The level gauge shall be sealed, or shall have a 24-mesh screen installed to prevent the entrance of any insects. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material.
GR001 - GROUND	Finished Water Storage	The ladder on the ground storage tank extended all the way to the ground and did not have a lockable hatch on it. Either the bottom 6 feet of the ladder shall be taken off, or a lockable hatch shall be provided on the ladder to prevent unauthorized access to the top of the storage tank. Fencing, locks on access manholes, and other necessary precautions shall be provided to prevent trespassing, vandalism, and sabotage.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The Monthly Chorine Reports show that daily monitoring is not being performed on Sundays. The water system must check the chorine residuals daily to ensure adequate monitoring is being conducted at the water system.
FACILITY	CATEGORY	FINDINGS
1049024-001 - WELL #1	Source	The pressure gauge was broken on well #1. A new pressure gauge shall be installed on the well head. The discharge piping shall be equipped with a check valve in or at the well, a shutoff valve, a pressure gauge, a means of measuring flow, and a smooth nosed sampling tap located at a point where positive pressure is maintained.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	General site cleanup is recommended at the pump house. There is an excess of unused parts on the ground in the pump house.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Northwest Region VII

Re: Enforcement Survey  
SPILLWAY ESTATES WATER SYSTEM Public Water System  
PWS ID LA1049030  
JACKSON Parish

Dear Mr. Corkern:

At the request of the Engineering Services Enforcement Unit, a formal enforcement survey was conducted on December 5, 2018 at the public water system SPILLWAY ESTATES WATER SYSTEM. This inspection is part of our program to ensure compliance with the Code of Federal Regulations Title 40 Parts 141-142 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during previous Routine Sanitary Survey inspections and any follow-up inspections that may have occurred.

Other Violations during the past year

No other violations were reported in the past year.

**NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS**

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

Based upon today's review of the available records and the visual examination of the facilities, the following additional deficiencies require corrective action.

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Other	At the time of the inspection, the ground storage tank was noted to have significant corrosion at all over the tank

		located at the Navajo Road well site. Have the tank inspected by a qualified person and repair and paint the interior and exterior of the tank; or submit engineered plans and replace the ground storage tank located at the Navajo Road well site.
--	--	--

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
HD002 - HYDROPNEUMATIC	Finished Water Storage	At the time of the inspection, the pressure gage was not functioning. Repair or replace the pressure gage at the Hydropneumatic Tank located on Pine Bluff Road.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

Respectfully,

Stephen K Ray, R.S.

GRETNA WATERWORKS Public Water System  
PWS ID LA1051003  
JEFFERSON Parish

Dear Mr. Baudoin:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the January 10, 2018 sanitary survey inspection of the public water supply system for GRETNA WATERWORKS (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

"An Equal Opportunity Employer"

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	<p>During the survey the City of Gretna indicated that its current cross connection control program is not currently up to date with the latest version of the plumbing code.</p> <p>The City of Gretna does not have a process in place to notify or track which customers have tested their back flow prevention devices out in the distribution system.</p> <p>Gretna needs to develop a system of notifying its customers when back flow prevention device inspections are due, as well as maintain a database of who has and has not tested their devices.</p> <p>LAC.51:XII.344.A and .B,</p> <p>"A. As used in this Section, mandatory containment practices means the containment practices prescribed in and required by the state Uniform Construction Code, LAC 17:I,including maintenance and testing requirements, and any additional or related requirements of this Part.</p> <p>B. In order to protect its water supply from potential contamination, each water supplier shall develop and implement a written back flow prevention plan outlining the policies and procedures it will use to verify that its customers comply with mandatory containment practices, and shall make a reasonable effort to ensure that only customers who comply with mandatory containment practices connect or remain connected to its water supply."</p>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	<p>The City of Gretna ensures compliance of the back flow prevention codes during the permitting process of new customer connections.</p> <p>The City of Gretna has not performed a survey of its distribution system to confirm that existing customers are complying with code requirements.</p> <p>LAC.51:XII:343.A, "There shall be no physical connection between a public water supply and any other water supply which is not of equal sanitary quality and under an equal degree of official supervision; and there shall be no connection or arrangement by which unsafe water, hazardous fluid or contamination may enter a public water supply system."</p>

FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	<p>Gretna's fluoride day tank is hard piped to the bulk storage tank. The fluoride day tank is also at a lower elevation than the bulk storage tank.</p> <p>If the ball valves in between the bulk storage and day tank were to be left open or to fail this would eliminate the safety precaution of having a day tank.</p> <p>A different arrangement needs to be made so that in the event of a valve failure the bulk storage tank cannot be siphoned into the water system.</p> <p>The fluoride day tank is opaque and does not have a proper level gauge.</p> <p>LAC.51:XII.319.D.15, "For fluoride only, day tanks shall be provided where bulk storage of liquid chemical is provided, meet all the requirements of section 5.1.10 of the Ten State Standards, hold no more than a 30 hour supply, and be scale mounted or have a calibrated gauge painted or mounted on the side if liquid levels can be observed in a gauge tube or through translucent sidewalls of the tank. In opaque tanks, a gauge rod extending above a reference point at the top of the tank, attached to a float can be used. The ratio of the area of the tank to its height shall be such that unit readings are meaningful in relation to the total amount of chemical fed during a day;"</p>
FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	<p>The Ammonia storage tank or loading area connection was not clearly labeled with the product in the tank.</p> <p>Storage tanks and pipelines for liquid chemicals shall be specified for use with individual chemicals and not used for different chemicals. Offloading areas must be clearly labeled to prevent accidental cross-contamination.</p>

#### Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	<p>The Fluoride feed system does not have any anti-siphon devices on the discharge of the fluoride feed pump.</p> <p>A spring opposed diaphragm type anti- siphon device shall be provided for all fluoride feed lines and dilution water lines.</p>

FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	<p>The fluoride injection point is inside the clearwell above the water level but not above the overflow level of the clearwell. This is not an approved air gap.</p> <p>Fluoride solutions shall be injected at a point of continuous positive pressure or suitable air gap provided.</p>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
PF003 - Backwash Pump	Pump/pumping facility and control	<p>Gretna currently only has one pump as a filter back wash pump. Gretna should have multiple pumps for redundancy in the event of a failure.</p> <p>At least two pumping units shall be provided. With any pump out of service, the remaining pump or pumps shall be capable of providing the maximum pumping demand of the system. The pumping units shall have ample capacity to supply the peak demand against the required distribution system pressure without dangerous overloading.</p>
FACILITY	CATEGORY	FINDINGS
TP001 - SURFACE WATER TREATMENT PLANT	Treatment	Gretna's circular clarifier has rust holes on the baffle that separates the raw and the clarified water. This needs to be repaired or replaced as necessary to prevent further corrosion and prevent any short circuiting of treatment.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	<p>A formal comment letter from the review of the submitted nitrification control plan was issued by LDH on July 7, 2017. At this time, none of the comments have been addressed or responded to.</p> <p>Nitrification monitoring based on the proposed nitrification control was not being performed at the time of this survey.</p> <p>A review of previous monitoring data in the first two quarters of 2017 indicate a possibility of nitrification at the AM Vets monitoring area, where Nitrite and ATP levels are elevated. The data provided to us is a snapshot summary, it does not have weekly or daily monitoring results.</p> <p>Nitrification monitoring shall be implemented as soon as possible. Comments on the nitrification control plan shall be addressed as soon as possible.</p> <p>LAC XII:367.G - Where a continuous chloramination (i.e., chlorine with ammonia addition) method is used, a nitrification control plan shall be developed and submitted to the state health officer.</p>
FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	<p>All certified water operators have retired. There is no formal agreement or contract in place for a duly certified operator to supervise and control the water system.</p> <p>LAC 51:XII.309.A - All public water supplies shall be under the supervision and control of a duly certified operator as per requirements of the State Operator Certification Act, Act 538 of 1972, as amended.</p>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	<p>Adequate information regarding the current status of the system's cross connection control program was not provided during the sanitary survey.</p> <p>The water system cannot assure that the owners of backflow prevention devices are having them field-tested annually.</p>

		<p>Backflow prevention devices located within the distribution system shall be identified and field-tested annually in order to assist in ensuring that such devices provide continuing backflow protection.</p> <p>LAC 51:XII.344 - Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.</p>
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	<p>Investigative coliform bacteria samples are not consistently taken after repairs are made to the distribution system, including when fire hydrants are replaced.</p> <p>The City of Westwego Operation and Maintenance Manual does not list provisions regarding issuing boil water advisories, nor performing investigative monitoring for coliform bacteria, when pressure drops below 15psi.</p> <p>The repair or service of a main potentially exposes it to contamination. Investigative monitoring for coliform bacteria is absolutely necessary in order to provide a record for determining the effectiveness of disinfection procedures where performed.</p> <p>Where mains have been 1) removed from service for planned repairs or for maintenance that exposes them to contamination and 2) mains that have undergone emergency repairs because of physical failure, in accordance with AWWA 651, determine the bacteriological quality by laboratory test after disinfection.</p> <p>LAC 51:XII.335.E - All public water supplies shall be operated and maintained to provide a minimum positive pressure of 15 pounds per square inch gauge at all service connections at all times.</p>

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	<p>The monitoring plan portal has not been updated to reflect changes in monitoring locations. There are locations where the sample collection point does not match what is shown on the monitoring plan.</p> <p>The sample locations shall be updated in the monitoring plan portal.</p> <p>LAC 51:XII.903.A - Public water systems shall collect routine total coliform samples at sites which are representative of water throughout the distribution system in accordance with a written monitoring plan approved by the state health officer. Each public water system (PWS) shall submit a written monitoring plan on a form approved by the state health officer. The monitoring plan shall include a minimum number of point of collection (POC) monitoring sites calculated by multiplying 1.5 times the minimum number of samples required to be routinely collected in accordance with Subsections C and D of this Section, rounding any mixed (fractional) number product up to the next whole number. The monitoring plan shall include a map of the system with each POC sampling site identified along with a 911 street address (if there is no 911 street address, then the latitude/longitude coordinates shall be provided). In accordance with requirements of Subsection E of this section, the plan shall also indicate how the PWS will alternate routine sampling between all of the approved POC sampling sites.</p>
FACILITY	CATEGORY	FINDINGS
EL001 - 300K GAL HORTON ELEVATED TANK	Finished Water Storage	<p>At the time of the survey it was not known if the tank was in service. The tower pressure gauge indicated 64 psi, but the altitude valve indicates 0 psi.</p> <p>Determine if the tank is in use. If it is, a level indicating device should be provided.</p> <p>Adequate controls shall be provided to maintain levels in distribution system storage structures. Level indicating devices should be provided at a central location.</p>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

As of the time of the survey, there were several Violations for Inadequate Minimum Chlorine Residual which have not been responded to. A written response is required to be sent to LDH regional offices within 10 days of receiving the Notice of Violation.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Re: Class I Sanitary Survey  
TOWN of ELTON WATER SYSTEM Public Water System  
PWS ID LA1053001  
JEFFERSON DAVIS Parish

Dear Mayor Laughlin:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the December 10, 2018 sanitary survey inspection of the public water supply system for TOWN of ELTON WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## **Parties Present**

<b>Name</b>	<b>Organization</b>
Solomon Angwafo	OPH-Region V Engineering
Stephanie Woods	Town Of Elton

## **NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The water system is not under the control and supervision of a duly certified operator. The water system, per population and system design at the time of the survey, must be placed under the supervision and control of a certified operator holding at least level two (2) certifications in the categories of Water Production and Water Distribution. The operator certification office can be reached by phone at (225) 342-7508. The operator certification website is located on LDHs website using the following link: <a href="http://www.dhh.louisiana.gov/index.cfm/page/416">http://www.dhh.louisiana.gov/index.cfm/page/416</a>
FACILITY	CATEGORY	FINDINGS
Management	Other	There is a water leak at the elevated tower near the access manhole of the center support. The foundation to the riser pipe center support has been significantly eroded by the leak. This leak must be addressed to avoid potential contamination and further damage to the elevated tower.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The piping at the master meter and check valve pit is inundated with water of questionable quality that poses a potentially hazardous cross connection risk. The valve pit should remain covered and drained on a routine basis. Devices may be installed to keep the pit dry and free from possible sources of contamination and corrosion.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system has not complied with the requirements of the Cross Connection Control Program. There is no customer list with backflow devices being managed by the water system. A customer listing must be compiled showing customers and applicable devices. All commercial customers must be assessed for proper backflow prevention devices. The water system must have a procedure for addressing existing customers that do not currently have the required protection

		<p>device. From this survey visit, there is currently a carwash without the required protection. Protection with this customer must be addressed. Please provide evidence that all backflow prevention devices owned by the Town of Elton are being properly tested and maintained. Also provide to this office a copy of the Cross Connection Control Ordinance.</p>
--	--	---

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	<p>Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link:  <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a>. Please send the Region 5 office a copy of the next three (3) months of properly recorded, chlorine residual forms.</p>
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	<p>From review, the finished water storage facility (elevated tower) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions since it was inspected in July 2013. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facility could benefit from an inspection.</p>

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The drain pipe for the elevated tower discharges over an area that is depressed and holding ponding water. The depressed area must be graded, paved, and redressed and/or to allow for positive drainage and prevent erosion around the foundation of the tower that could compromise the structural integrity of the tower.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The existing screen for the elevated tower overflow pipe is damaged. The overflow piping must be screened with a four mesh, non-corrodible screen. Replace the damaged screen with a new four mesh, non-corrodible screen to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED	Finished Water Storage	The overflow for the elevated storage tank does not discharge over a splash plate or drainage inlet structure. The overflow must discharge over a splash plate or drainage inlet structure to prevent erosion around the foundation of the tower that could compromise the structural integrity of the tower.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water piping at the master meter pit is showing signs of heavy corrosion. This corrosion can result in leaks if, not treated. The water pipe must be cleaned and treated to prevent further corrosion.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Solomon Angwafo, E.I.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

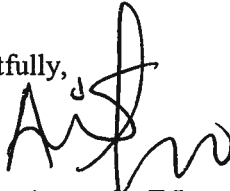

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

Violation Number	Violation Date	Violation Type	Compliance Period
5003931	06/11/2018	INADEQUATE MIN CHLORINE RESIDUAL(GW&SW)	06/01/2018 - 06/30/2018
5003929	12/14/2017	INADEQUATE MIN CHLORINE RESIDUAL(GW&SW)	12/01/2017 - 12/31/2017

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 337-475-3232.

Respectfully,

Jennings, LA 70546

Re: Class I Sanitary Survey  
CITY of JENNINGS WATER SYSTEM Public Water System  
PWS ID LA1053003  
JEFFERSON DAVIS Parish

Dear Mr. Guinn:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 4, 2018 sanitary survey inspection of the public water supply system for CITY of JENNINGS WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Ira Bertrand	City Of Jennings Water System
Phillip Deshotel	City Of Jennings Water System
Steven R. Joubert	OPH-Region V Engineering
Solomon Angwafo	OPH-Region V Engineering

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR,

significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The bypass pipe for Well #4 N Church Street connects to a subsurface drainage system without the benefit of an air gap. There shall be no connection or arrangement by which unsafe water may enter a public water supply system. The well bypass pipe must be modified to discharge as needed over a drain inlet with an approved air gap or a blind flange with the ability to direct flow as desired when pumping to waste.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
EL001 – PLANT  EL002 - E. JEFFERSON	Finished Water Storage	From review, the finished water storage facilities (Elevated towers) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facilities could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #2, #3, #4	Treatment	The chemical feed tanks for lime and polymer/phosphate used for water treatment are not properly labeled. The chemical feed tanks must be labeled with the name of the chemical being injected for treatment. Provide a label for each chemical from their respective manufacturers on the chemical feed tanks.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #2, #3, #4	Treatment	There is no secondary containment provided for the liquid chemical polymer/phosphate being used for water treatment. Secondary containment prevents spillage or accidental drainage of chemicals due to equipment and primary containment failure. (It could not be confirmed if the tank onsite currently provides this protection.)

FACILITY	CATEGORY	FINDINGS
1053003-002 - WELL #2 - CENTER OF PLANT	Source	The well's outer casing and discharge piping are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing and discharge piping must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing and discharge piping, to prevent sources of potential contamination.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #2, #3, #4	Treatment	The water system has chosen a monochromatic painting scheme for the piping supporting the filter units. The pipes should be labeled to support the quality of water in each pipe. Directional arrows to distinguish the flow of water should be incorporated.
FACILITY	CATEGORY	FINDINGS
AERATOR	Treatment	The City of Jennings has future plans to remove and replace this treatment unit. Remember to pursue the required written approval prior to the unit's replacement.
FACILITY	CATEGORY	FINDINGS
CLARIFIER	Treatment	During the survey, it was noted that the metal components in the clarifier are deteriorating. The weirs had heavy build up though cleaned monthly. The City of Jennings Water System should give some thought and make plans and provisions to replace the deteriorating component of the clarifier in future.

FACILITY	CATEGORY	FINDINGS
FILTER BEDS	Treatment	During the survey, it was noted that the filter beds had algae growth on the filter walls. Algae growth on filter walls need to be addressed as part of the water plant's cleaning and maintenance activities.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Solomon Angwafo, E.I.  
707-A East Prien Lake Road  
Lake Charles, Louisiana 70601

The following compliance history is provided for your information

### **Bacteriological Sampling History**

#### **Positive bacteriological sampling history for the past year**

Sample ID	Type	Date	Comment	Chlorine Residual	
				Free	Total
A1714624-006		8/25/2017		0.000	
A1714574-004	Routine	8/23/2017		1.730	

### **Violation History**

#### **Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

No unresolved observations were recorded in this category.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
1053005-002 - WELL #2 - SCHOOL	Source	The existing sanitary seal on the well is undersized. The sanitary seal must be of the proper diameter that can tightly fit the well flange up to it edges to prevent any possible contamination of the source.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1 - 4TH STREET  TP002 - TP FOR WELL #2 - SCHOOL	Treatment	There is no secondary containment provided for the liquid chemical (polyphosphate) being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment with a sufficient containment volume for the phosphate storage tank.
FACILITY	CATEGORY	FINDINGS
1053005-001 - WELL #1 - 4TH STREET N  1053005-003 - WELL #3 - 4TH STREET S	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1053005-003 - WELL #3 - 4TH STREET S	Source	The well's pressure gauge is broken. The well's discharge piping must be equipped with a working pressure gauge.
FACILITY	CATEGORY	FINDINGS
1053005-001 - WELL #1 - 4TH STREET N	Source	There is currently no pressure gauge installed on the discharge piping of the well. A pressure gauge must be installed on the discharge piping upstream of the check valve as a means to measure the actual operating head conditions for the well. Install a pressure gauge on the well discharge piping to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1 - 4TH ST  TP002 - TP FOR WELL #2 - SCHOOL	Treatment	No weighing scales are provided. Weighing scales shall be provided where chlorine gas is utilized. The water system currently uses automatic switch over between 2 - 150 lb. gas cylinders to guarantee continuous disinfection.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1 - 4TH ST  TP002 - TP FOR WELL #2 - SCHOOL	Treatment	The chlorine feed room is not equipped with an inspection window. A shatter resistant inspection window is required where chlorine gas is fed.

**During the survey it was noted that some valves in the distribution system have been leaking water due to their design and age. Though these leaks may not be and severe, the water system is encouraged to have a maintenance plan to upgrade or replace these valves and other related water distribution appurtenances.**

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	Testing reports for the cross connection control devices could not be confirmed for all applicable customers. All cross connection control devices must be tested annually by a certified tester. Support testing of devices at Dollar General and Hathaway Village.
FACILITY	CATEGORY	FINDINGS
1053013-001 - WELL #1 - NORTH	Source	The sample tap for the well is connected to a tee style fitting with another tap and hose for washdown installed. The sample tap must be supportive of sampling measures only. The tap with washdown hose must be eliminated.
FACILITY	CATEGORY	FINDINGS
1053013-002 - WELL #2 - SOUTH	Source	The sample tap for the well is connected to a tee style fitting with another tap suitable for a hose for washdown. The sample tap must be supportive of sampling measures only. The available tap for washdown must be eliminated.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1, #2, #3	Treatment	The chemical feed tank for potassium permanganate is not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
FACILITY	CATEGORY	FINDINGS
TP001 - TP FOR WELL #1, #2, #3	Treatment	There is no secondary containment provided for the chemicals (phosphate and potassium permanganate) being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment with a sufficient containment volume for the phosphate and potassium permanganate feed tanks.

FACILITY	CATEGORY	FINDINGS
1053013-003 - WELL #3 - WEST	Source	A pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1053013-002 - WELL #2 - SOUTH	Source	The well's casing vent piping and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's casing vent piping and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's casing vent piping and steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1053013-003 - WELL #3 - WEST	Source	The well's steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's steel base plate to prevent sources of potential contamination.
FACILITY	CATEGORY	FINDINGS
1053013-001 - WELL #1 - NORTH	Source	The well's steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's steel base plate to prevent sources of potential contamination.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

**Some of the piping supporting the filters under the covered area have flaky painting. The piping needs to be cleaned, treated, and painted to resist corrosion to protect from possible source of contamination.**

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Southwest Region V  
Attn: Steven R. Joubert, P.E.  
707-A East Prien Lake Road

Re: Class I Sanitary Survey  
JEFF DAVIS WATER AND SEWER COMMISSION 1 Public Water System  
PWS ID LA1053014  
JEFFERSON DAVIS Parish

Dear Mr. Bordelon:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the September 21, 2018 sanitary survey inspection of the public water supply system for JEFF DAVIS WATER AND SEWER COMMISSION 1 (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

## Parties Present

Name	Organization
Solomon Angwafo	OPH-Region V Engineering
David Trahan	Jeff Davis Water & Sewer Commission #1

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system has not complied with the requirements of the Cross Connection Control Program. Customers with backflow prevention devices are unaware of the need to test their devices and submit records to the water system. From reviewing existing records, it appears that many customers are not supporting the water system with the required annual test results. The water system has not taken any action against customers who do not test their devices or submit the results to the water system and it does not appear that this would be completely justified due to them not properly notified. In order to get back into compliance, the water system must develop a current customer list with backflow prevention devices. This customer listing must be made available showing customers and applicable devices to be managed by the Cross Connection Control Program. The water system should establish a folder for each customer with supporting results each year to demonstrate compliance between sanitary survey visits. Installation request letters, reminder notices for annual test, device test results, and all other correspondences to and from each customer should be filed in these respective folders. The folder for each customer should support the path to compliance. Please provide some feedback on the cases where recent reports are lacking from these customers (Metal Plate galvanizing Inc., Lacassine High School, Lee Mallet, LA Spirits, Moriss Shea, Port Aggregates, etc.). Additionally, the water system is encouraged to draft and keep on file various letters (example: Reminder to test devices, installation request, Service Disconnection, etc.) with standard language for use when needed. Please provide this office with some feedback on the areas mentioned.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED STORAGE TANK	Finished Water Storage	From review, the finished water storage facilities (elevated towers) should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the finished water storage facility could benefit from an inspection.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### Written Response Required

## NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing,

or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Other	The old aerator structure is in a state of disrepair. The structure needs to be replaced or removed.
FACILITY	CATEGORY	FINDINGS
Management	Other	The water system has a significant monthly water loss. October 2017 the water system experienced a water loss of 53%. This may be due to the amount of water leaking from the Ground Storage Tank. The water system must determine if there are other losses occurring in the distribution system as well. Where leaks are found, they must be properly repaired.
FACILITY	CATEGORY	FINDINGS
Management	Security	The fence around the well sites and treatment plant must be repaired or replaced to prevent unauthorized access to the facility.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system must adopt and implement a cross connection control program.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND 2	Finished Water Storage	At the time of the inspection, the ground storage tank was severely leaking. The tank must be replaced to prevent contamination of the finished water supply.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC	Finished Water Storage	The pressure tank exhibited signs of corrosion. The water system's current plans include removal of the pressure tank and replacement with a variable frequency drive. If the tank is not removed, the tank must be cleaned, inspected, repaired, and painted.
FACILITY	CATEGORY	FINDINGS
1059001-001 - WELL 1	Source	Well No. 1 must be properly plugged and abandoned.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
PF001 - PUMP STATION @ GR001	Pump/pumping facility and control	The piping in the pump room showed signs of corrosion. The piping must be cleaned, repaired, and painted to prevent further deterioration of the metal.
FACILITY	CATEGORY	FINDINGS
TP002 - DISINFECTION	Treatment	The vent was located directly across from the exhaust fan at the bottom of the building. The vent must be located at the
FACILITY	CATEGORY	FINDINGS

Re: Class I Sanitary Survey  
MANIFEST RHINEHART WATER SYSTEM Public Water System  
PWS ID LA1059014  
LA SALLE Parish

Dear Mrs. Guinn:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the April 13, 2018 sanitary survey inspection of the public water supply system for MANIFEST RHINEHART WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Matthew Page	Ldh Oph Engineering Services
Mike McGuffee	Jcp Management Inc

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### **Significant Deficiencies**

**No observations were recorded in this category.**

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	At the time of inspection there was no level device on the elevated tower. A pressure gauge or water level slide needs to be in place to read the level of water inside the elevated tower.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED TOWER	Finished Water Storage	At the time of inspection there was no smooth-bore sample tap on the elevated tower. A smooth-bore sample tap must be added to the elevated tower for collection of water samples.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND BOOSTER AT JENA ROAD	Finished Water Storage	At the time of the inspection there was no screen in place on the overflow of the ground storage tank. A 24 mesh non-corrodible screen needs to be on the overflow to prevent anything from entering the tank via the overflow.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	Other	It is the recommendation of the Department of Health that all storage facilities be inspected, cleaned, repaired, repainted, or replaced every 3-5 or as needed.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Central Region VI  
Attn: Matthew Page,  
5604-B Coliseum Blvd.  
Alexandria, Louisiana 71303

The following compliance history is provided for your information

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

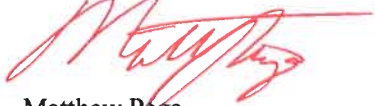

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

Violation Number	Violation Date	Violation Type	Compliance Period
6002118	10/06/2017	INADEQUATE MIN CHLORINE RESIDUAL(GW&SW)	09/01/2017 - 09/30/2017
6002117	08/02/2017	INADEQUATE MIN CHLORINE RESIDUAL(GW&SW)	06/01/2017 - 06/30/2017

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at 318-434-2388.

Respectfully,

Matthew Page,  
Region 6

Town of Duson Water System

## NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

## Unresolved Observations

No unresolved observations were recorded in this category.

### Significant Deficiencies

No observations were recorded in this category.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
EL002 Elevated Tower #2	Finished Water Storage	The existing screen for the elevated tower overflow pipe is damaged. The overflow piping must be screened with a four mesh, non-corrodible screen. Replace the damaged screen with a new four mesh, non-corrodible screen to provide protection at all times.
FACILITY	CATEGORY	FINDINGS
TP001 Treatment Plant #1	Treatment	There is no secondary containment provided for the chemical being used for water treatment. Secondary containment must be provided for liquid chemical storage tanks to prevent uncontrolled discharge from accidental spillage, failure of the primary containment system or equipment failure. Provide a secondary means of containment for the polymer blend (TMB-901) storage tank with a sufficient containment volume.
FACILITY	CATEGORY	FINDINGS
1055011-003 Well #3 (West Well)	Source	The pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1055011-004 Well #4 (East Well)	Source	The pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1055011-004 Well #4 (East Well)	Source	The well does not currently have an air release valve installed. The discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh, corrosion resistant screen.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Hayden K. Keigley, P.E.  
825 Kaliste Saloom Road  
Brandywine 3, Suite 100

## NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### **Unresolved Observations**

No unresolved observations were recorded in this category.

### **Significant Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1055015-003 Well #3 Southwest Well	Source	The wiring entering the casing seal creates a void. The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate any voids in the casing seal to prevent bacteriological contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1055015-004 Well #4 Northeast Well	Source	The wiring entering the casing seal creates a void. The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate any voids in the casing seal to prevent bacteriological contamination.

### **Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	All TCR taps used to collect routine coliform samples are a double-sided connection of a hose bib. TCR sampling stations must not share piping and space with other points of usage that could provide for negative influences and yield sampling results that may not be consistent with water quality. Configure the sampling station to support monitoring only without any undue influences.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.50 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
HD001 Hydropneumatic Tank	Finished Water Storage	The hydropneumatic tank is not equipped with a water site glass. A water site glass must be provided on the hydropneumatic tank to provide for a means of measuring the contents being stored in the tank.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	During the sanitary survey, a free chlorine residual reading of 0.01 mg/L was obtained at the point of entry sampling site. This indicates that the minimum free chlorine residual is not being maintained throughout the distribution system. It was discussed that the water system will make adjustments to the disinfection injection point fitting to address the current issue. Under the direction of the designated operator, make necessary adjustments to the quantity of disinfection being injected to ensure the proper minimum free chlorine residual of 0.50 mg/L is present throughout the distribution system at all times.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1055015-004 Well #4 Northeast Well	Source	A pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1055015-003 Well #3 Southwest Well	Source	A pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

**No observations were recorded in this category.**

### **Written Response Required**

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	The water system was granted the status of LDH-OPH Approved Chemical Laboratory/Drinking Water in 2005, but did not have the corresponding certificate on display. The certificate of approval must be prominently displayed along with the designated operator certifications as specified in the Louisiana Administrative Code, Title 51, Part XII, Chapter 15.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been enforcing the CCCP and there were no current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.
FACILITY	CATEGORY	FINDINGS
1055035-005 - WELL #7	Source	At least two (2) sources of groundwater must be provided. The total developed groundwater source capacity, unless otherwise specified by the reviewing authority, shall equal or exceed the design maximum day demand with the largest producing well out of service. A backup or emergency connection to another approved public water supply may suffice as a second source of water provided that source can meet demand. All sources of water must be approved by the LA Dept. of Health. Provide confirmation to this office when this proposed well has been completed and put into service.

"An Equal Opportunity Employer"

FACILITY	CATEGORY	FINDINGS
1055035-003 - WELL #5 - CNR IBERIA ST AND JACQUES ST	Source	The well is currently inactive and has not been plugged and abandoned. All wells that are not being used as a source of water must be properly plugged and abandoned in accordance with all of Louisiana's applicable standards, rules and regulations. Upon completion, provide written documentation to LDH stating that the well has been properly plugged and abandoned.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological test and chemical test results reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, the test results for Disinfection Byproducts and Lead & Copper were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH. Additionally, the clerical staff is combining records and reports for multiple water systems. The records and reports for a water system must be kept separate from those of any other water systems under the supervision of the designated operator. Copies of records and reports shall be filed in a folder identifying the public water system by name as well as its public water system identification number (PWS ID #).
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND	Finished Water Storage	From review, the ground storage tank should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the interior or exterior conditions of the ground storage tank. In addition to exterior cleaning and/or painting, the interior surfaces of the ground storage tank could benefit from an inspection.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	One of the chemical feed tanks is not properly labeled. The chemical feed tank must be clearly labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The light is currently not operational, either the bulb is burned or there is an electrical issue. The chlorine room must be equipped with a working light.
FACILITY	CATEGORY	FINDINGS
1055035-004 - WELL #6 - ON EAST SIDE OF SCHOOL ST	Source	The well does not currently have an air release valve installed. The discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh, corrosion resistant screen.

"An Equal Opportunity Employer"

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The point of entry (POE) sample tap is located on the treatment plant's plumbing and needs to be relocated for proper sampling. The tap must be located after all treatment processes, pumps, and storage tanks on a common pipe headed to the distribution system prior to the first customer. The POE sampling site should be truly representative of the water being supplied to the customers. This task must be completed prior to the next POE sampling event by LDH. If not completed, the water system could receive a monitoring violation that requires public notice to all customers. OPH Region 4 engineering staff can be reached by phone @ 337-262-5746 to discuss appropriate locations for the new POE sample tap.

#### **Written Response Required**

Milton Water System  
PWS ID#: LA1055046  
Lafayette Parish

Dear Ms. Soileau:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the June 1, 2018 sanitary survey inspection of the public water supply system for Milton Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Hayden Keigley	LDH Region IV Engineering
Kyle Champagne	LDH Region IV Engineering
George Placher	Milton Water System, Inc.
Crystal Presley	Milton Water System, Inc.
William Theriot	Milton Water System, Inc.

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 Distribution System	Distribution System	Some of the testing reports for the cross connection control devices were not on file and could not be confirmed. All cross connection control devices must be tested annually by a certified tester.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
1055046-001 Well #1 West Well	Source	A pressure gauge is installed on the discharge piping upstream of the check valve as a means to measure actual operating head conditions. The pressure gauge is currently installed downstream of the check valve. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 Treatment Plant #1	Treatment	The chlorine feed room is not equipped with an inspection window. A shatter resistant inspection window is required where chlorine gas is fed.
FACILITY	CATEGORY	FINDINGS
TP002 Treatment Plant #2	Treatment	The chlorine feed room is not equipped with an inspection window. A shatter resistant inspection window is required where chlorine gas is fed.

**Written Response Required**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	Security	There is no protective fencing around Well #4 and Well #5. A fence, capable of being locked, must be constructed around all aspects of the public water supply. The fence shall be resistant to climbing and at least 6 feet high.
FACILITY	CATEGORY	FINDINGS
1055060-002 - WELL #2	Source	The area around the well is excessively wet. The area around the well must be well drained and facilitate the rapid removal of water within a 50' radius of the well. The ponding water presents a potential source of contamination.
FACILITY	CATEGORY	FINDINGS
1055060-004 - WELL #4	Source	The casing vent for the well is not securely attached and not equipped with an appropriate screen. The well must be equipped with a downturned casing vent, having a minimum height of 12 inches above grade or floor and a minimum diameter of 1 inch. The vent opening must be covered with an appropriate non-corrodible 24-mesh screen. Secure the well casing vent and replace the well casing vent screen to prevent the entrance of contaminants. The well does not have a concrete cover slab. The well shall have a concrete cover slab of at least 4 inches thick and extend at least 2.5 feet in all directions.
FACILITY	CATEGORY	FINDINGS
1055060-005 - WELL #5	Source	The casing vent for the well is not securely attached and not equipped with an appropriate screen. The well must be equipped with a downturned casing vent, having a minimum height of 12 inches above grade or floor and a minimum diameter of 1 inch. The vent opening must be covered with an appropriate non-corrodible 24-mesh screen. Secure the well casing vent and replace the well casing vent screen to prevent the entrance of contaminants. The well does not have a concrete cover slab. The well shall have a concrete cover slab of at least 4 inches thick and extend at least 2.5 feet in all directions.
FACILITY	CATEGORY	FINDINGS
1055060-002 - WELL #2	Source	The well is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve and shall terminate in a downward direction. The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap. A 12-inch clearance must be provided underneath the tap.
FACILITY	CATEGORY	FINDINGS
1055060-001 - WELL #1	Source	The well is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve and shall terminate in a downward direction. The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap. A 12-inch clearance must be provided underneath the tap.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological test and chemical test results reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, Stage 2 Disinfection Byproduct and Bacteriological sampling test results were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The maximum-residence-time (MRT) and other total coliform sample taps are missing. At least five (5) suitable smooth-nosed sample taps must be provided in the distribution system for total coliform monitoring. To facilitate proper sample collection, there must be at least 12 inches of clearance below the nozzle of the tap(s). This includes the distance above grass or weeds.
FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	There are multiple unapproved taps within the distribution system being used for chemical and bacteriological sampling. Sample taps used for collecting samples must be of the smooth nozzle type. Replace the threaded taps with approved smooth nozzle sample taps to decrease the possibility of submitting samples that test positive for coliform, which would result in a violation and public notification by the water system.
FACILITY	CATEGORY	FINDINGS
HD001 - WELLS #1 & #2 PRESSURE TANK	Finished Water Storage	The tank is not equipped with control equipment consisting of a pressure gauge and pressure operated start-stop controls. A pressure gauge and pressure operated start-stop controls must be provided.
FACILITY	CATEGORY	FINDINGS
TP001 - WELLS #4 & #5 TREATMENT	Treatment	The chemical feed tank is not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
FACILITY	CATEGORY	FINDINGS
TP002 - WELLS #1 & WELL #2 TREATMENT	Treatment	The chemical feed tank is not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
FACILITY	CATEGORY	FINDINGS
1055060-002 - WELL #2	Source	The well is not equipped with a check valve or means for measuring flow located at a point where positive pressure is maintained. A check valve and means for measuring flow must be provided.
FACILITY	CATEGORY	FINDINGS
1055060-001 - WELL #1	Source	The well is not equipped with a check valve or means for measuring flow located at a point where positive pressure is

		maintained. A check valve and means for measuring flow must be provided.
FACILITY	CATEGORY	FINDINGS
1055060-004 - WELL #4	Source	The well is not equipped with a pressure gauge or means for measuring flow located at a point where positive pressure is maintained. A pressure gauge and means for measuring flow must be provided.
FACILITY	CATEGORY	FINDINGS
1055060-005 - WELL #5	Source	The well is not equipped with a pressure gauge or means for measuring flow located at a point where positive pressure is maintained. A pressure gauge and means for measuring flow must be provided.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

**Comments:** Well # 2 is not equipped with a means of measuring pressure or flow. The system must equip the well with a pressure gauge upstream of the well check valve and a flow meter downstream of the check valve.

Visit Date	Notify Date	Reason	Severity	Category	Facility
06/13/2016	06/17/2016	Formal Enforcement	Minor	Treatment	TP001-TREATMENT

**Comments:** The labeling for the sodium hypochlorite tank has faded/washed off. The labeling for the chemical tank must be replaced.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	Operator Compliance with State Requirements	The water system is not under the control and supervision of a duly certified operator. The water system, per population and system design at the time of the survey, must be placed under the supervision and control of a certified operator holding at least level 1 certifications in the categories of Water Production and Water Distribution. The operator certification office can be reached by phone at (225) 342-7508. The operator certification website is located on LDHs website using the following link: <a href="http://www.dhh.louisiana.gov/index.cfm/page/416">http://www.dhh.louisiana.gov/index.cfm/page/416</a>
FACILITY	CATEGORY	FINDINGS
Management	Other	The water system is currently not disinfecting the water being produced. Disinfection is mandatory and must be provided for all public water systems. The chemical solution tank and chemical injection pump must be connected, functioning properly and operable at all times to provide for continuous disinfection.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Bacteriological and chemical test result reports from the laboratory shall be kept on file and retained for not less than ten (10) years. During the sanitary survey, the test results were not available for review. All such records shall be made available for review during inspections and sanitary surveys of the public water system performed by LDH.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system representative was not able to retrieve records or provide evidence of sufficient maintenance or breadth of record keeping. An approved drinking water system must ensure that records and reports are satisfactorily maintained and retrievable. Copies of records and reports for any drinking water system shall be filed in folders identifying the public water system by name as well as public water system identification number (PWS ID #) and shall be made available for review upon request by the state health officer. It is strongly recommended that the water system begin filing documentation (e.g. lab reports, correspondences, etc.) separately and in chronological order for the following categories: Daily Operating Reports, LDH-Approved Chlorine Residual Reports, Bacteriological Sampling Results, Chemical Sampling Results, Cross Connection Control Policy /Backflow Prevention Test Reports, Miscellaneous. Feel free to contact this office at (337) 262-5746 to further discuss fulfilling these requirements.
FACILITY	CATEGORY	FINDINGS
HD002 - HYDROPNEUMATIC #2	Finished Water Storage	The water sight glass for the hydropneumatic tank is broken. A water sight glass must be provided on the hydropneumatic tank. Replace the water sight glass on the hydropneumatic tank to provide for a means of measuring the contents being stored in the tank.
FACILITY	CATEGORY	FINDINGS
HD001 - HYDROPNEUMATIC #1	Finished Water Storage	The water sight glass for the hydropneumatic tank is broken. A water sight glass must be provided on the hydropneumatic tank. Replace the water sight glass on the hydropneumatic tank to provide for a means of measuring the contents being stored in the tank.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT	Treatment	The chemical feed tank is not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT	Treatment	The sodium hypochlorite tank is exposed to sunlight and environmental conditions. The feed tank shall be located out of the sunlight in a cool area.
FACILITY	CATEGORY	FINDINGS
1055067-001 - WELL #1- (PRIMARY) FURTHEST BARN	Source	The well's discharge piping is not equipped with a pressure gauge or a flow-measuring device. A pressure gauge and a means for measuring flow must be provided. Install a device or monitoring methods to measure flow from the well and a pressure gauge on the well's discharge piping upstream of the check valve to detect any changes in operating conditions.

FACILITY	CATEGORY	FINDINGS
1055067-002 - WELL #2 - (SECONDARY) CLOSEST BARN	Source	The well's discharge piping is not equipped with a pressure gauge or a flow-measuring device. A pressure gauge and a means for measuring flow must be provided. Install a device or monitoring methods to measure flow from the well and a pressure gauge on the well's discharge piping upstream of the check valve to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

Duson, LA 70529

Re: Class I Sanitary Survey  
VILLAGE QUEST SUBDIVISION WATER SYSTEM Public Water System  
PWS ID LA1055070  
LAFAYETTE Parish

Dear Mr. Pomier:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the May 31, 2018 sanitary survey inspection of the public water supply system for VILLAGE QUEST SUBDIVISION WATER SYSTEM (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	System Management and Operation	An approved chemical lab status certification has not been obtained from LDH for analyzing the physical and chemical analytes currently being altered by the water system (total phosphate). All public water systems must use an approved chemical laboratory to perform all required chemical analyses using approved laboratory methodologies. Review the required instruction at <a href="http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf">http://ldh.la.gov/assets/oph/Center-EH/engineering/SDWP/Lab_Approval_Instructions.pdf</a> and complete the required form located at <a href="http://ldh.la.gov/index.cfm/page/963">http://ldh.la.gov/index.cfm/page/963</a> under the heading Approved Laboratory Form (Instructions).
Management	System Management and Operation	During the sanitary survey visit, it was noted that changes requiring a written approval from the state health officer were made without authorization (zinc orthophosphate/polyphosphate addition). Please submit to this office signed, stamped, and dated As-Built plans and specifications from a Louisiana licensed professional engineer for review and approval by LDH.
1055074-002 - WELL #2	Source	The well is equipped with an inoperable smooth nosed sampling tap. The well must be equipped with a working smooth nosed sampling tap to facilitate the collection of water samples.
1055074-001 - WELL #1- NOT IN USE	Source	There is only one (1) active well being used to provide service to the public water system. At least two (2) sources of groundwater must be provided. This well is currently inactive, but may be connected to the distribution system and used as a secondary source or emergency well provided it has been approved as a source that can meet the maximum demand for the system. The well discharge piping must have a port installed to allow for a connection to properly disinfect the raw water prior to discharging into the distribution system. All water sources and treatment processes must be approved by the Louisiana Department of Health.

"An Equal Opportunity Employer"

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
HD001 - PRESSURE TANK #1	Finished Water Storage	The tank is not equipped with a functional air volume control (AVC) device or pressure gauge. A working AVC device and pressure gauge must be provided.
FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The water system currently uses a phosphate blend (MCT 501c) as an inhibitor for corrosion control. All public water systems that use orthophosphates for treatment must have test equipment capable of monitoring and measuring total phosphate. The total phosphate applied shall not exceed 10 mg/L measured as PO4. Obtain adequate testing equipment and begin monitoring the dosage to insure that the total phosphate does not exceed this limit.
FACILITY	CATEGORY	FINDINGS
1055074-001 - WELL #1- NOT IN USE	Source	The well is not equipped with a casing vent. The well must be equipped with a downturned casing vent with appropriate non-corrodible, 24 mesh screening. It must be installed at a minimum height of 12 inches above the grade or floor and must have a minimum diameter of 1/2 inches.
FACILITY	CATEGORY	FINDINGS
1055074-002 - WELL #2	Source	The well's discharge piping does not appear to be equipped with a functional dedicated check valve or a flow measuring device. A dedicated check valve and a means for measuring flow must be provided to detect any changes in operating conditions. Install a device or monitoring methods to measure flow from the well and a dedicated check valve downstream of the raw water tap on the well's discharge piping to isolate the well from finished water and other sources.
FACILITY	CATEGORY	FINDINGS
1055074-001 - WELL #1- NOT IN USE	Source	The well's discharge piping is not equipped with a flow measuring device. Install a device (or monitoring methods) to measure flow from the well and to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

March 12, 2018

John Pomier  
Belleville Subdivision Water System  
1307 South Fieldspan Road  
Duson, LA 70529

Re: Class I Sanitary Survey  
Belleville Subdivision Water System  
PWS ID #: LA 1055094  
Lafayette Parish

Dear Mr. Pomier:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the March 7, 2018 sanitary survey inspection of the public water supply system for Belleville Subdivision Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Hayden Keigley	LDH Region IV Engineering
Channa Faling	American Wastewater Systems
Lucas Seaux	American Wastewater Systems

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	The current Monitoring Plan for the water system needs to be updated. Public water systems must have an up-to-date Monitoring Plan that includes all required routine compliance samples to be collected for the monitoring period. Every sampling site must have the correct address, coordinates and description of the location. Update and resubmit the water systems Monitoring Plan to LDH for review and approval. The Monitoring Plan for the public water system can be found on LDHs Monitoring Portal website at the following link: <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 Distribution System	Distribution System	The system has not developed a Cross Connection Control Program (CCCP). All public water systems must have a CCCP outlining its policies and procedures. The water system must maintain a list of all critical customers within the distribution system and implement the CCCP. It is the responsibility of the water system to ensure all residential customers having auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and any required annual testing reports for any backflow prevention devices is required to be kept on file by the water system for review during sanitary surveys and inspections performed by LDH. Please provide a written statement to include actions that will be taken by the water system to develop a CCCP and a list of critical customers requiring backflow preventers, if applicable.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1055094-001 Well #1	Source	The discharge piping of the well is currently equipped with an unapproved sample tap. The discharge piping of the well must be equipped with a smooth nozzle type tap terminating in a downward position and installed upstream of the check valve. Replace the threaded tap with an approved smooth nozzle tap for the collection of raw water samples.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1055094-001 Well #1	Source	The existing concrete slab cover for the well has a crack. The well must be provided with a watertight cover constructed of concrete at least 4 inches thick and extending at least two and a half feet (2.5') from the well in all directions. Repair the cracked slab to prevent any potential contamination into the well.

**Minor Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated LDH approved chlorine residual forms. These "LDH Approved Chlorine Residual Forms" can be found on LDH's website at the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	System Management and Operation	The electrical wiring for the wells submersible pump is currently unprotected. All electrical work must conform to the National Electric Code Requirements. Provide conduit for the pumps electrical wiring with an adequate watertight connection at the entrance through the wells casing sanitary seal to eliminate possible contamination into the well.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
DS0950 Distribution System	Distribution System	There are currently two (2) unapproved taps within the distribution system being used for chemical and bacteriological sampling. Sample taps used for collecting samples must be the smooth nozzle type. Replace the threaded taps with approved smooth nozzle sample taps to decrease the possibility of submitting samples that test positive for coliform, which would result in a violation and public notification by the water system.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
HD001 Hydropneumatic Tank #1	Finished Water Storage	The hydropneumatic tank is not equipped with a water site glass. Provide a water site glass on the hydropneumatic tank as a means for measuring the levels being stored in the tank.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
HD001 Hydropneumatic Tank #2	Finished Water Storage	The hydropneumatic tank is not equipped with a water site glass. Provide a water site glass on the hydropneumatic tank as a means for measuring the levels being stored in the tank.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
HD001 Hydropneumatic Tank #1	Finished Water Storage	The hydropneumatic tank is not equipped with an approved sample tap. The finished water storage tank must be equipped with a smooth nozzle type tap. Install an approved sampling tap on the South hydropneumatic tank to facilitate the collection of water samples for bacteriological and chemical analyses.

FACILITY	CATEGORY	FINDINGS
1055094-001 Well #1	Source	There is currently no pressure gauge or pressure gauge installed on the discharge piping of the well. A pressure gauge must be installed upstream of the check valve and an acceptable means of measuring the flow from the source must be provided for the well. Install a pressure gauge to detect any changes in the operating head conditions and provide a means for measuring the flow for the well.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### Recommendations

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
1055094-001 Well #1	Source	There is currently only one (1) active well being used to provide service to the public water system. At least two (2) sources of groundwater must be provided. The total developed groundwater source capacity must not be less than the design maximum day demand with the largest producing well out of service. A backup or emergency connection to another approved public water supply may suffice as a second source of water provided that the other public water system can meet the additional demand. All sources of water distributed to the customers by the water system must be approved by LDH.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Hayden K. Keigley, P.E.  
825 Kaliste Saloom Road  
Brandywine 3, Suite 100  
Lafayette, LA 70508

The following compliance history is provided for your information

**Bacteriological Sampling History**

**Positive bacteriological sampling history for the past year**

No Positive Samples were reported in the past year.

**Violation History**

**Monitoring Violations during the past year**

No monitoring violations were reported in the past year.

**Maximum Contaminant Level (MCL) Violations during the past year**

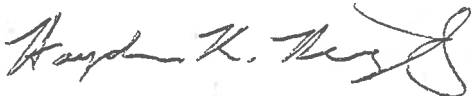

No maximum contaminant level violations were reported in the past year.

**Other Violations during the past year**

Violation No.	Violation Date	Violation Type	Compliance Period
4009829	08/24/2017	Inadequate Minimum Chlorine Residual (GW & SW)	08/01/2017 - 08/31/2017

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at (337) 262-5634.

Re: Class I Sanitary Survey  
Sunrise Addition Trailer Park Water System  
PWS ID #: LA 1055103  
Lafayette Parish

Dear Mr. McClinton:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the February 20, 2018 sanitary survey inspection of the public water supply system for Sunrise Addition Trailer Park Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

Name	Organization
Hayden K. Keigley	LDH Region IV Engineering
Rusty McClinton	Sunrise Addition Trailer Park
Randy Savoy	Water And Wastewater Utilities, Inc.

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

**Significant Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	The current Monitoring Plan for the water system needs to be updated. All public water systems must have a monitoring plan that includes all required routine compliance samples to be collected for the monitoring period. Every sampling site must have the correct address and description of the location. Update and re-submit the Monitoring Plan for LDH review and approval. The Monitoring Plan Portal for the public water system can be found on LDH's website at: <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a>
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	Security	There are some sections of the wooden fence that have been removed providing for inadequate protection of the water systems facilities. A continuous fence, capable of being locked, must be constructed and maintained to prevent trespassing, vandalism and sabotage of the water systems facilities. Provide a continuous security fence around the well, treatment plant and pressure tank for protection against unauthorized access.

**Minor Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
HD001 Hydropneumatic Tank #1	Finished Water Storage	From review, the hydropneumatic tank being used for finished water storage should be inspected. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the hydropneumatic tank's interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of the hydropneumatic tank could benefit from an inspection.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
HD001 Hydropneumatic Tank #1	Finished Water Storage	The hydropneumatic tank is equipped with a threaded sampling tap. The hydropneumatic tank must be equipped with a smooth-nosed sampling tap to facilitate bacteriological and chemical analyses, when needed. Replace the current tap on the hydropneumatic tank with a smooth-nozzled tap for collecting samples.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
HD001 Hydropneumatic Tank #1	Finished Water Storage	The overflow pipe for the hydropneumatic tank is currently not screened. The overflow pipe for a finished water ground storage tank must be screened with a twenty-four (24) mesh, non-corrodible screen. Install a 24 mesh, non-corrodible screen on the overflow pipe to provide sanitary protection for the hydropneumatic tank at all times.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
HD001 Hydropneumatic Tank #1	Finished Water Storage	The water site glass for the hydropneumatic tank is broken. A water site glass must be provided on the hydropneumatic tank and operational. Replace the water site glass on the hydropneumatic tank to provide for a means of measuring the contents being stored in the tank.

FACILITY	CATEGORY	FINDINGS
TP001 Treatment Plant	Treatment	The water system has only one (1) chlorine injection pump installed. Systems that require chlorination to protect the water supply must have a sufficiently sized replacement pump on standby. Provide documentation stating that a replacement pump has been provided onsite for chlorine injection and continuous disinfection.
FACILITY	CATEGORY	FINDINGS
1055103-001 Well #1	Source	The well is currently not equipped with a means for measuring flow. A means for measuring flow from the well must be provided.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
1055103-001 Well #1	Source	There is currently only one (1) active well being used to provide service to the public water system. At least two (2) sources of groundwater must be provided. The total developed groundwater source capacity must equal or exceed the design maximum day demand with the largest producing well out of service. A backup or emergency connection to another approved public water supply may suffice as a second source of water provided that source can meet demand. All sources of water must be approved by LDH.

**Written Response Required**

## NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

No unresolved observations were recorded in this category.

**Significant Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	The current monitoring plan for the water system needs to be updated. This task can be accomplished by logging into the Monitoring Plan Portal (MPP) at the following link: <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a> During the survey, it was noted that the map needs to be updated to reflect the relocation of the point of entry (POE). An additional chlorine residual (ACR) check sampling site needs to be installed. The monitoring plan will be returned for the relocation of the POE site and addition of an ACR site by the water system. For assistance, please feel free to call me at (337) 262-5634.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1055125-001 Well #1 East Well	Source	The well is equipped with a smooth nosed sampling tap but does not terminate in a downward position. The smooth nosed sampling tap must terminate in a downward position with a minimum clearance of 12 inches above the concrete slab cover. Make modifications to properly facilitate the collection of raw water samples from a smooth nosed sampling tap terminating in a downward position.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1055125-002 Well #2 West Well	Source	The well is equipped with a smooth nosed sampling tap but does not terminate in a downward position. The smooth nosed sampling tap must terminate in a downward position with a minimum clearance of 12 inches above the concrete slab cover. Make modifications to properly facilitate the collection of raw water samples from a smooth nosed sampling tap terminating in a downward position.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1055125-002 Well #2 West Well	Source	The wiring entering the casing seal creates a void. The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate any voids in the casing seal to prevent bacteriological contamination.

**Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site(s) and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the approved ACR site(s) and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.50 mg/L is required at all times and at all locations tested. Begin measuring the residuals daily at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
HD001 Hydropneumatic Tank	Finished Water Storage	The hydropneumatic tank is not equipped with an approved sample tap. The finished water storage facility must be equipped with a smooth-nosed sampling tap. Install an approved tap on the hydropneumatic tank in a downturned direction to facilitate the collection of water samples for bacteriological and chemical analyses, when needed.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 Treatment Plant	Treatment	The chemical feed tank is not properly labeled. The chemical feed tank must be labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1055125-001 Well #1 East Well	Source	A pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1055125-002 Well #2 West Well	Source	A pressure gauge is currently installed downstream of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1055125-001 Well #1 East Well	Source	All wells that are used as a ground water source to provide service to a public water system must be registered. There is no documentation on file with LDH stating that this well has been registered with the Department of Natural Resources (DNR). Please provide this office with the driller's log and the DNR well registration form including the GWR ID for the well.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1055125-002 Well #2 West Well	Source	All wells that are used as a ground water source to provide service to a public water system must be registered. There is no documentation on file with LDH stating that this well has been registered with the Department of Natural Resources (DNR). Please provide this office with the driller's log and the DNR well registration form including the GWR ID for the well.

### **Written Response Required**

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R. §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

### Unresolved Observations

No unresolved observations were recorded in this category.

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system's revised total coliform monitoring plan is outdated and has been returned for updating. The descriptions for POE-009 and TCR-022 do not reflect the existing physical locations in the field. Review all monitoring sites for accuracy and make the necessary corrections. This can be accomplished by logging into the Monitoring Plan Portal at <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a> . OPH Region 4 engineering staff can be reached by phone @ 337-262-5316 to discuss the review and approval of the monitoring plan.
FACILITY	CATEGORY	FINDINGS
1055131-001 - WELL #1 - ON RIGHT WHEN ENTERING GATE	Source	The electrical conduit for the submersible pump has detached from the well casing entrance. Reattach the electrical conduit and provide an adequate watertight connection at the wiring entrance to the well casing sanitary seal to eliminate possible contamination into the well.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - TREATMENT PLANT	Treatment	The chemical feed tank is not properly labeled. The chemical feed tank must be clearly labeled with the name of the chemical being injected for treatment. Provide a label from the manufacturer on the chemical feed tank.
FACILITY	CATEGORY	FINDINGS
1055131-001 - WELL #1 - ON RIGHT WHEN ENTERING GATE	Source	The well does not currently have an air release valve installed. Where applicable, the discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh, corrosion resistant screen.
FACILITY	CATEGORY	FINDINGS
1055131-002 - WELL #2 - ON LEFT WHEN ENTERING GATE	Source	The well does not currently have an air release valve installed. Where applicable, the discharge piping shall be equipped with an air release-vacuum relief valve located upstream from the check valve, with exhaust/relief piping terminating in a down-turned position at least 18 inches above the floor and covered with a 24 mesh, corrosion resistant screen.

FACILITY	CATEGORY	FINDINGS
1055131-002 - WELL #2 - ON LEFT WHEN ENTERING GATE	Source	The well's pressure gauge is currently installed on the downstream side of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.
FACILITY	CATEGORY	FINDINGS
1055131-001 - WELL #1 - ON RIGHT WHEN ENTERING GATE	Source	The well's pressure gauge is currently installed on the downstream side of the check valve. Pressure gauges are installed on the discharge piping upstream of check valves as a means to measure actual operating head conditions. Install a pressure gauge on the well discharge piping upstream of the check valve to detect any changes in operating conditions.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

## Unresolved Observations

No unresolved observations were recorded in this category.

### **Significant Deficiencies**

No observations were recorded in this category.

### **Deficiencies**

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system has opted to use software for maintaining records related to Cross Connection Control Program (CCCP); however, testing reports for the cross connection control devices could not be confirmed or retrieved in certain cases. In order to demonstrate compliance during sanitary surveys, the water system must maintain a current spreadsheet showing active customers with backflow prevention devices (including air gaps) and customers who have been notified to install a backflow prevention device. The spreadsheet must reflect backflow preventer type and the last date of inspection for each customer. All cross connection control devices must be tested annually by a certified tester. It is recommended that the water system create separate files for individual customers to keep a chronological record of inspection reports and correspondences sent to notify them of their obligations as part of the water systems working CCCP. For assistance, please feel free to call this office at 1-337-262-5746.

LPWDN SOUTH REGION Public Water System  
PWS ID LA1055192  
LAFAYETTE Parish

Dear Mr. Neef:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the September 24, 2018 sanitary survey inspection of the public water supply system for LPWDN SOUTH REGION (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### NOTICE OF VIOLATIONS

By this notice, LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	The water system has opted to use software for maintaining records related to Cross Connection Control Program (CCCP); however, testing reports for the cross connection control devices could not be confirmed or retrieved in certain cases. In order to demonstrate compliance during sanitary surveys, the water system must maintain a current spreadsheet showing active customers with backflow prevention devices (including air gaps) and customers who have been notified to install a backflow prevention device. The spreadsheet must reflect backflow preventer type and the last date of inspection for each customer. All cross connection control devices must be tested annually by a certified tester. It is recommended that the water system create separate files for individual customers to keep a chronological record of inspection reports and correspondences sent to notify them of their obligations as part of the water systems working CCCP. For assistance, please feel free to call this office at 1-337-262-5746.

**Deficiencies**

**No observations were recorded in this category.**

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

Lafayette Parish

Dear Mayor Langlinais:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the January 25, 2018 sanitary survey inspection of the public water supply system for Corner Market Water System. The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

**Parties Present**

**Name**

Hayden K. Keigley  
Dennis Pitre

**Organization**

LDH Region IV Engineering  
City Of Broussard Water System

**NOTICE OF VIOLATIONS**

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 Distribution System	Distribution System	All backflow prevention devices within the distribution system must be tested annually. This must be enforced by the water system and all test reports must be maintained on file for review during inspections and surveys. During the sanitary survey, it was noted that there were no annual test reports for the backflow preventer on file for review by LDH. Please provide an annual test report for the backflow preventer.
FACILITY	CATEGORY	FINDINGS
2055093-001 Well #1	Source	The wiring entering the casing seal creates a void. The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the casing seal to prevent bacteriological contamination.

### Minor Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The water system is recording the daily POE and MRT chlorine residuals on unapproved (i.e. outdated) Chlorine Residual Forms. The water system is not recording the monthly chlorine residual check at the ACR site. Start measuring the chlorine residuals at all required site locations using a digital chlorine analyzer. The routine chlorine residual readings must be recorded on signed and dated, LDH approved forms. Please provide the Chlorine Residual Forms for the next three (3) consecutive months. The updated "LDH Approved Chlorine Residual Forms" can be found at the following: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a>

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	Other	Based on the location of your water system with close proximity to larger water systems, it may be possible for you to connect to another public water system. There are several potential advantages to becoming a customer of an existing water system. There could be a cost savings associated with this change. Additionally, you would no longer have to follow the regulatory requirements of a public water system. The water system should research this option. It is beneficial information to have even if the choice is not to make any changes to water service as it stands now.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
2055093-001 Well #1	Source	All wells that are used as a ground water source to provide service to a public water system must be registered. There is no documentation on file with LDH stating that this well has been registered with the Department of Natural Resources (DNR). Please provide this office with the drillers log and the DNR well registration form which includes the GWR ID for the well.

### **Written Response Required**

DS0950 Distribution System	Distribution System	The annual test report for the backflow prevention device could not be confirmed. All cross connection control devices must be tested annually by a certified tester. Please have the backflow preventer tested and provide a current test report.
FACILITY	CATEGORY	FINDINGS
2055094-001 Well #1	Source	The current casing seal has void spaces that provide for the possible entrance of foreign substances that could lead to bacteriological contamination. Eliminate the voids in the casing seal to prevent bacteriological contamination.
FACILITY	CATEGORY	FINDINGS
2055094-001 Well #1	Source	The well is not equipped with an approved sample tap. An approved sample tap must be located upstream of the well discharge line check valve and shall terminate in a downward direction. The sample tap must be the smooth nozzle type. The area under and around the tap must accommodate sample containers which could be as large as a one gallon plastic milk jug without having to tilt the container to place under and remove from under the tap. A minimum clearance of 12 inches must be provided underneath the raw water sample tap.

### Deficiencies

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website using the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 4 office a copy of the next three (3) months of properly recorded, chlorine residual forms.

FACILITY	CATEGORY	FINDINGS
2055094-001 Well #1	Source	The exhaust/relief piping for the air release-vacuum relief valve is not properly screened. The relief piping must be covered with a 24 mesh corrosion resistant screen. Replace the current screening on the relief piping with a 24 mesh, non-corrodible screen to protect against potential entrance of contaminants.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

LDH/OPH Engineering Services – Acadian Region IV  
Attn: Hayden K. Keigley, P.E.  
825 Kaliste Saloom Road  
Brandywine 3, Suite 100  
Lafayette, LA 70508

The following compliance history is provided for your information:

**Bacteriological Sampling History**

Positive bacteriological sampling history for the past year

No Positive Samples were reported in the past year.

**Violation History**

Monitoring Violations during the past year

No monitoring violations were reported in the past year.

Maximum Contaminant Level (MCL) Violations during the past year

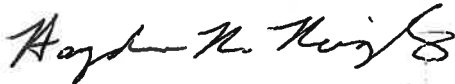

No maximum contaminant level violations were reported in the past year.

Other Violations during the past year

No other violations were reported in the past year.

Your cooperation and prompt response is greatly appreciated. If you have any questions, or if we can be of further assistance, please contact me at (337) 262-5634.

Respectfully,

Hayden K. Keigley, P.E.

Re: Class I Sanitary Survey  
Dubach Water System Public Water System  
PWS ID LA1061003  
Lincoln Parish, Louisiana

Dear Mayor Jenson:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the October 26, 2018 sanitary survey inspection of the public water supply system for Dubach Water System (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

#### Parties Present

Name	Organization
Tyler Lollis	LDH/OPH Engineering Services
Rory Dobbs	LDH/OPH Engineering Services
Bob Jenson	Town of Dubach
Shelby Kelley	Water System Operator

#### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

"An Equal Opportunity Employer"

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

**No unresolved observations were recorded in this category.**

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
EL001 - EST #1 (HIGH TECH ROAD)	Finished Water Storage	At the time of inspection, there was a hole in the fence at the elevated tank site on High Tech Rd. Repair the hole in the fence.
FACILITY	CATEGORY	FINDINGS
1061003-002 - WELL #1 (AT SCHOOL)	Source	At the time of inspection, there seemed to be a small drip leak from underneath the discharge piping insulation near the pressure gauge line tap. Find the source of the leak and repair it to prevent possible contamination into the discharge piping.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the system did not have the tools to calibrate their chlorine test equipment. Chlorine meters should be calibrated periodically to ensure the accuracy of the chlorine readings. Please acquire a calibration kit and calibrate the chlorine meter according to the manufacturer's recommended procedure and frequency.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the water system was recording chlorine residuals at all the correct points and frequencies but was marking the readings on the wrong forms. Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website at the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 8 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
FACILITY	CATEGORY	FINDINGS

DS0950 - DISTRIBUTION SYSTEM	Distribution System	One of the water system point of entry taps was located on Ground Storage Tank GR001 (Hope Hill). The water system must have a sample tap that adequately represents water served to customers and is located such that it draws directly from the water main before the first customer. Please relocate the point of entry tap and notify this office when this item is completed.
FACILITY	CATEGORY	FINDINGS
EL002 - EST #2 (HOPE HILL)	Finished Water Storage	At the time of inspection, a small channel was dug in the ground from the ground storage tank overflow to the fence-line to divert water away from the tank. Fill this channel in with gravel so the site is graded properly and water will drain away from the tank.
FACILITY	CATEGORY	FINDINGS
TP001 - TP @ WELL #1	Treatment	At the time of inspection, the chlorine building fan and light were not functioning. Fix the fan and light so that both are in working order.
FACILITY	CATEGORY	FINDINGS
TP002 - TP @ WELL #2	Treatment	The light in the chlorine building was not functioning at the time of inspection. Please replace the bulb or fix the electrical wiring so the light will work properly.
FACILITY	CATEGORY	FINDINGS
1061003-002 - WELL #1 (AT SCHOOL)	Source	The pressure gauge on the well discharge piping was broken. Install a working pressure gauge upstream of the check valve.
FACILITY	CATEGORY	FINDINGS
1061003-001 - WELL #2 (HENRY ROAD)	Source	The terminating end of the air relief valve piping was not downturned. Please correct the exhaust piping to terminate in a downturned position at least 18 inches above the floor and be covered with a 24 mesh non-corrodible screen.
FACILITY	CATEGORY	FINDINGS
1061003-001 - WELL #2 (HENRY ROAD)	Source	The well discharge piping appeared to have some areas of flaking paint. Paint protects the well discharge piping from pitting, corrosion, and future leaks. Please clean and paint the well discharge piping.
FACILITY	CATEGORY	FINDINGS
1061003-002 - WELL #1 (AT SCHOOL)	Source	The well discharge piping appeared to have some areas of flaking paint. Paint protects the well discharge piping from pitting, corrosion, and future leaks. Please clean and paint the well discharge piping.

**The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.**

**The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to**

**this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.**

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TP @ WELL #1	Treatment	The chlorine building inspection window was cracked. Replace the cracked piece with a new shatter-resistant window pane.
FACILITY	CATEGORY	FINDINGS
HOPE HILL SITE	Management	This office recommends cutting back the trees and/or vegetation on the fence-line of the site.
FACILITY	CATEGORY	FINDINGS
WELL #1 SITE (AT SCHOOL)	Management	This office recommends cutting back the trees and/or vegetation on the fence-line of the site.
FACILITY	CATEGORY	FINDINGS
1061003-002 - WELL #1 (AT SCHOOL)	Source	This office recommends adding a gravel splash pad for the well wasting pipe so that wasted water can effectively drain from the well site and not cause future erosion around the well concrete slab.

**Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	At the time of the survey, the system did not have a cross connection program in place. Each water supplier shall protect the water produced and distributed by its water supply system from potential contamination by ensuring compliance with the containment practices and maintenance/field testing requirements. In implementing ordinances, rules, contracts, policies, or other steps to achieve such compliance, water suppliers shall have the authority to prohibit or discontinue water service to customers who fail to install, maintain, field test, or report the results of the field test for containment assemblies or methods.
FACILITY	CATEGORY	FINDINGS
GR002 - GST AT WELL NO. 7	Finished Water Storage	The overflow piping needs the screen replaced. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so as to prevent the entrance of birds, insects, dust or other contaminating material. Openings or vents shall face downward and shall be not less than 2 feet above the floor of a pump room, the roof or cover of a tank, the ground surface or the surface of other water supply structures.
FACILITY	CATEGORY	FINDINGS
GR001 - GROUND STORAGE TANK	Finished Water Storage	The overflow piping needs the screen replaced. Any vent, overflow, or water level control gauge provided on tanks or other structures containing water for any potable water supply shall be constructed so

		as to prevent the entrance of birds, insects, dust or other contaminating material. Openings or vents shall face downward and shall be not less than 2 feet above the floor of a pump room, the roof or cover of a tank, the ground surface or the surface of other water supply structures.
FACILITY	CATEGORY	FINDINGS
1061005-003 - WELL NO. 6	Source	At the time of inspection, there was a leak coming from the blowout valve. The leak must be fixed such that the piping is sealed. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.
FACILITY	CATEGORY	FINDINGS
1061005-001 - WELL NO. 4	Source	The overflow discharge pipe needs a splash pad to prevent erosion around the well slab. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.

#### Deficiencies

FACILITY	CATEGORY	FINDINGS
TP001 - WELL NO. 4	Treatment	At the time of inspection, the ventilating fan was inoperable. Where chlorine gas is used, the room shall be constructed to provide the following: each room shall have a ventilating fan with capacity which provides one

		complete air change per minute when the room is occupied.
FACILITY	CATEGORY	FINDINGS
1061005-001 - WELL NO. 4	Source	The well head needs to be cleaned.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

Re: Enforcement Survey  
HICO WATER SYSTEM Public Water System  
PWS ID LA1061008  
LINCOLN Parish

Dear Mr. Corkern:

At the request of the Engineering Services Enforcement Unit, a formal enforcement survey was conducted on March 29, 2018 at the public water system HICO WATER SYSTEM. This inspection is part of our program to ensure compliance with the Code of Federal Regulations Title 40 Parts 141-142 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during previous Routine Sanitary Survey inspections and any follow-up inspections that may have occurred.

**NOTICE OF DEFICIENCIES / NOTICE OF VIOLATIONS**

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

Based upon today's review of the available records and the visual examination of the facilities, the following additional deficiencies require corrective action.

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
1061008-003 - SOUTH WELL # 3 HWY 545 EAST SITE	Source	The area around the well is eroded. The area around the well must be well graded and facilitate the rapid removal of water within a 50' radius of the well. There shall be no pathway for contamination into the well casing and/or discharge piping. The well site grading, the well slab and all well appurtenances including casing, sanitary seal, vent, and drawdown tube shall be maintained to prevent the introduction of contamination into the well casing and discharge piping.

**Minor Deficiencies**

FACILITY	CATEGORY	FINDINGS
GR002 - GROUND	Finished Water Storage	The area around the storage tank is eroded. This area must be well drained to facilitate the rapid removal of water within a 50' radius of the storage tank. The ponding water presents a potential source of contamination and potentially compromise the integrity of the structure.
FACILITY	CATEGORY	FINDINGS
GR002 - GROUND	Finished Water Storage	The overflow for a ground-level storage reservoir shall open downward and be screened with twenty-four mesh non-corrodible screen. The screen shall be installed within the overflow pipe at a location least susceptible to damage by vandalism. If a flapper valve is used, a screen shall be provided inside the valve.
FACILITY	CATEGORY	FINDINGS
1061008-004 - NORTH WELL # 4 HWY 545 EAST SITE	Source	The wells pressure gauge is broken. The wells discharge piping must be equipped with a working pressure gauge.

**Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

No observations were recorded in this category.

Respectfully,

A handwritten signature in black ink, reading "C. Gooch", is written over a horizontal line.

Re: Class I Sanitary Survey  
Grambling State University West Public Water System  
PWS ID LA1061016  
Lincoln Parish, Louisiana

Dear Dr. Gallot, Jr.:

The Department of Health would like to thank you and the site visit participants for the courtesy and assistance provided during the August 30, 2018 sanitary survey inspection of the public water supply system for Grambling State University West Water System (System). The intent of these surveys are to evaluate the System's ability to produce and distribute safe drinking water in accordance with Safe Drinking Water Act (SDWA) requirements, including the SDWA's Ground Water Rule (GWR), 40 C.F.R. §§ 141.400-405 and Surface Water Treatment Rule (SWTR), 40 C.F.R. §§ 141.700-723 and Title 51 of the Louisiana Administrative Code. This letter confirms and supplements items noted during the inspection.

### Parties Present

Name	Organization
Tyler Lollis	LDH/OPH Engineering Region 8
Ewing Collier	Grambling State University WS

### NOTICE OF VIOLATIONS

By this notice LDH calls to your immediate attention the following deficiencies observed during our inspection of your system's facilities and records. Under the GWR and SWTR, significant deficiencies are defined to include a defect in design, operation, or maintenance, or a failure or malfunction of the sources, treatment, storage or distribution system that LDH determines to be causing, or have potential for causing, the introduction of contamination into the water delivered to consumers. See 40 C.F.R §§ 141.403(a)(4)(GWR) and 141.723(b) (SWTR).

"An Equal Opportunity Employer"

**Significant Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	The current Monitoring Plan for the water system needs to be updated with the correct Point Of Entry (POE) on the Monitoring Plan Portal (MPP). The POE for the system has been updated since the new regulations have gone into effect, and is now being taken where a TCR site is listed. Every sampling site must have the correct address and description of the location. Update and re-submit the Monitoring Plan for LDH review and approval. The Monitoring Plan Portal for the public water system can be found on LDHs website at: <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a>
FACILITY	CATEGORY	FINDINGS
TP001 - TP @ WELL SITE	Treatment	There is a leak in the chlorine feed room pvc piping. The leak presents the potential for contamination of the potable water supply. Fix the leak in the chlorine feed room piping and notify the Region 8 office upon completion of this item.
FACILITY	CATEGORY	FINDINGS
1061016-002 - WELL #2	Source	The Well #2 casing vent is not covered by a 24 mesh corrosion resistant screen. Cover the well vent with a 24 mesh corrosion resistant screen and notify the Region 8 office upon completion of this item.
1061016-002 - WELL #2	Source	The well's outer casing, casing vent piping, discharge piping, and steel base plate used to support the pump are showing signs of heavy rusting, corrosion, and flaking paint. The well's outer casing, casing vent piping, discharge piping, and steel base plate must be maintained to avoid further corrosion, deterioration and/or potential structural failure. Clean, treat and paint the well's outer casing, casing vent piping, discharge piping, and steel base plate to to resist further corrosion and deterioration that could lead to a potential source of contamination. Notify the LDH Region 8 office upon completion of these items.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of the survey, the system did not provide a copy of the Consumer Confidence Report for 2016. Public notices must be kept no less than 3 years after issuance. Please send a copy of the 2016 CCR to the Region 8 office.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	Chlorine residuals must be monitored daily at the water production (POE) site and recorded on the approved LDH Report #1. A critical point (MRT), the location in the water system furthest from treatment, must be monitored daily and recorded on the approved LDH Report #2. An additional chlorine residual check must be made monthly at the ACR site and recorded on the approved LDH Report #3. These sampling points were established for the water system during the submittal of the Monitoring Plan on the Monitoring Portal website. A free chlorine residual of 0.5 mg/L is required at all times and at all locations tested. Start measuring the residuals at the approved locations described using a

		digital chlorine analyzer and recording on signed and dated "LDH Approved Chlorine Residual Forms" which can be found on LDH's website at the following link: <a href="http://new.dhh.louisiana.gov/index.cfm/page/1725">http://new.dhh.louisiana.gov/index.cfm/page/1725</a> . Please send the Region 8 office a copy of the next three (3) months of properly recorded, chlorine residual forms.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
Management	M&R and Data Verification	The system could not provide any disinfectant by-product or lead and copper chemical sampling results. The system shall maintain these records for not less than 10 years. Please email or fax these records to the Region 8 office.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
EL001 - ELEVATED TANK	Finished Water Storage	From review, the elevated storage tank is showing signs of rust and corrosion and should be inspected and cleaned/painted. Finished water storage facilities are generally maintained and inspected on a routine basis. An inspection period of 3 to 5 years is recommended. The water system has no recent inspections to support the overall health of the finished water storages' interior or exterior conditions. In addition to exterior cleaning and/or painting, the interior surfaces of finished water storage facilities could benefit from an inspection
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 - TP @ WELL SITE	Treatment	The automatic switch-over mechanism for the chlorine gas cylinders is incomplete and nonfunctional, which presents the possibility of interrupted disinfection. The switchover mechanism must be properly installed to assure continuous disinfection. Please provide labeled photographic documentation of completed modifications.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 - TP @ WELL SITE	Treatment	The light is currently not operational, either the bulb is burned or there is an electrical issue. The chlorine room must be equipped with a working light.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
TP001 - TP @ WELL SITE	Treatment	The ventilating fan is currently not operational. Either the fan is broken or there is an electrical issue. The chlorine room must be equipped with a working ventilating fan.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1061016-003 - WELL #3 - NEW WELL	Source	The screening on the air release-vacuum relief valve is broken. The air release-vacuum relief valve must be covered with a 24 mesh corrosion resistant screen. Replace the air relief valve screen to prevent the entrance of contaminants.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1061016-003 - WELL #3 - NEW WELL	Source	The well discharge piping is showing signs of rust, corrosion and flaking paint. The well discharge piping must be cleaned, treated and painted to resist further corrosion and deterioration that could lead to a potential source of contamination.
<b>FACILITY</b>	<b>CATEGORY</b>	<b>FINDINGS</b>
1061016-002 - WELL #2	Source	The wells pressure gauge is broken. The wells discharge piping must be equipped with a working pressure gauge.

The following list of unresolved observations represent deficiencies that were cited during a previous sanitary survey and are pending corrective action by the water system.

**Unresolved Observations**

Visit Date	Notify Date	Reason	Severity	Category	Facility
09/24/2015	10/02/2015	Sanitary Survey, Finished	Significant	Source	1061016-002-WELL #2
<b>Comments:</b> At the time of the inspection it was noted the well vent was not screened at the west well. Install a vent screen at the west well.					
Visit Date	Notify Date	Reason	Severity	Category	Facility
09/24/2015	10/02/2015	Sanitary Survey, Finished	Minor	Distribution System	DS0950-DISTRIBUTION SYSTEM
<b>Comments:</b> It was noted at the time of the inspection that the total coliform rule (TCR) monitoring site located on 207 Appletree was receiving water from a broken water main. The operator stated that no customers are being served water from the majority of both mains located on Appletree and Willow Lanes. The system operator made a request to relocate the existing TCR monitoring sites at these locations and valve out the majority of the mains on Appletree and Willow Lanes. Control of the Grambling State University West will be returned to the system for the purpose of submitting a new Total Coliform Rule plan in the Monitoring Plan Portal as well as the installation of fully functioning TCR sampling sites.

<b>Comments:</b> The ventilation fan in the chlorine pump room was not working at the time of the inspection. Replace the fan in the chlorine pump room.					

Visit Date	Notify Date	Reason	Severity	Category	Facility
09/24/2015	10/02/2015	Sanitary Survey, Finished	Minor	Treatment	TP001-TP @ WELL SITE
<b>Comments:</b> At the time of the inspection, the bulb was burned out in the chlorine room. Replace the light bulb in the chlorine room.					

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

#### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
TP001 - TP @ WELL SITE	Treatment	The chlorine gas cylinders are not properly secured. Full and empty cylinders of chlorine gas must be restrained in position at all times to prevent upset. Properly secure all chlorine gas cylinders.
FACILITY	CATEGORY	FINDINGS
TP001 - TP @ WELL SITE	Treatment	The locking mechanism for the chlorine storage room is broken, and the door is held open with a small stone. The locking mechanism should be returned to working order.
FACILITY	CATEGORY	FINDINGS
TP001 - TP @ WELL SITE	Treatment	The pressure gauge in the chlorine feed room is broken. The pressure gauge should be replaced with a working gauge.

#### **Written Response Required**

Send written responses and confirmation regarding violations and recommendations to the office that conducted this survey at the following address:

<b>Comments:</b> At the time of the inspection, there was no disinfectant hooked up for well 2. If the intention is to keep well 2 in service as a public water well, then continuous disinfection must be in operation at this site and able to disinfect the water..					

### Significant Deficiencies

FACILITY	CATEGORY	FINDINGS
DS0950 - DISTRIBUTION SYSTEM	Distribution System	An ordinance for a Cross Connection Control Program (CCCP) was adopted by the water system. The water system has not been enforcing the CCCP and there were no current files for review during the sanitary survey. An up-to-date customer listing must be compiled showing the critical customers within the distribution system. All commercial customers should be assessed for proper backflow prevention devices. It is the responsibility of the water system to ensure all customers, residential and commercial, with auxiliary water, such as ponds, pools, fountains, animal watering troughs, etc., are properly filling these vessels using an air gap or an approved backflow prevention device. Customers must be given notification of their obligations as part of the water systems working CCCP. All correspondence and required annual testing must be kept on file by the water system for review during sanitary surveys and inspections by LDH. Please provide a written statement to include actions that will be taken by the water system to enforce the CCCP as a requirement, an up-to-date list of critical customers and current annual test reports for all customers with backflow preventers.

FACILITY	CATEGORY	FINDINGS
1061018-002 - WELL #3 BRASWELL LANE (NORTH)	Source	At the time of inspection, Well 3 was not functioning and the chlorine disinfection feed was not operational. All public water system wells must be maintained in an operational state and chemical analysis tests must be performed before the well can be used as a public water source. Otherwise the well must be properly plugged and abandoned, or the well may be assigned another use as a possible non-potable source of water for the Village of Simsboro Public Works Office or Fire Department. In either case, please submit a written statement which specifies the future of Well 3.

**Deficiencies**

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	At the time of inspection, the system did not have the means to calibrate their chlorine test equipment. Chlorine meters should be calibrated periodically according to manufacturer's recommendations to ensure the accuracy of the chlorine readings. Please acquire a calibration kit and calibrate the chlorine meter according to the manufacturer's recommended procedure and frequency.
FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	During the sanitary survey, it was discovered that the water system's total coliform monitoring plan was missing a point of entry tap that is present at the elevated tank. Update and re-submit the Monitoring Plan for LDH review and approval. The Monitoring Plan Portal for the public water system can be found on LDHs website at: <a href="https://www.ldhh-mpp.org/">https://www.ldhh-mpp.org/</a>
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED STORAGE TANK	Finished Water Storage	The elevated tank overflow line did not have a screen. Install a four mesh, non-corrodible screen on the overflow pipe.
FACILITY	CATEGORY	FINDINGS
EL001 - ELEVATED STORAGE TANK	Finished Water Storage	The elevated tank was equipped with a threaded sampling tap. Sample taps must be smooth nozzle type or be equipped with a vacuum breaker to prevent cross-contamination. Remove the threaded tap and replace with a smooth nozzle tap or equip the tap with a vacuum breaker.
FACILITY	CATEGORY	FINDINGS
TP005 - WELL #5 BRASWELL LANE WELL	Treatment	At the time of inspection, the chlorine building fan and light were not operational. Either the fan and light are broken or there is an electrical issue. Replace the fan and light or fix the electrical wiring so that both are operational.
FACILITY	CATEGORY	FINDINGS
TP002 - WELL #3 BRASWELL LANE (NORTH)	Treatment	At the time of inspection, the chlorine building fan and light were not operational. Either the fan and light are broken or there is an electrical issue. Replace the fan and light or fix the electrical wiring so that both are operational.

FACILITY	CATEGORY	FINDINGS
TP002 - WELL #3 BRASWELL LANE (NORTH)	Treatment	At the time of inspection, the chlorine disinfection feed lines and pump were disconnected from the well and the well was not operational. When the public water well is functioning properly, continuous disinfection must be provided to maintain a minimum concentration of 0.5 mg/l of free chlorine in the distribution system at all times. Unless the system submits a statement that Well 3 will be properly plugged and abandoned, reconnect the chlorine feed lines.
FACILITY	CATEGORY	FINDINGS
1061018-005 - WELL #5 - BRASWELL LANE WELL	Source	At the time of inspection, the pressure gauges on the well casing and discharge piping were broken. Replace the pressure gauges on the well.
FACILITY	CATEGORY	FINDINGS
1061018-005 - WELL #5 - BRASWELL LANE WELL	Source	At the time of inspection, the well discharge piping appeared to have several areas of flaking paint. Paint protects the well discharge piping from pitting, corrosion, and future leaks. Clean and paint the well discharge piping.
FACILITY	CATEGORY	FINDINGS
1061018-002 - WELL #3 BRASWELL LANE (NORTH)	Source	The screen on the air relief valve was broken. Install a new 24 mesh corrosion resistant screen on the air relief valve.

The significant deficiencies listed in the above table titled 'Significant Deficiencies' must be corrected and a written response submitted to the department within 90 days of the receipt of this letter. The response must summarize what actions you have taken to correct these items, and include all required documentation to support those actions. If additional time is required to correct these deficiencies, then the written response must also contain a request with specific dates when the deficiencies will be corrected.

The above noted deficiencies must be corrected to avoid possible enforcement action by the U.S. EPA Region 6 and/or the LDH-OPH Enforcement Unit. Interim corrective actions shall be performed as necessary to prevent health hazards and nuisances. As stated above, written confirmation must be provided within 90 days of receipt of this letter of your actions with regard to this matter. Be advised that the GWR requires you to notify LDH within 30 days of completion of the corrective action.

### **Recommendations**

The following observations made at the time of the inspection have the potential to result in deficiencies in the near future. LDH strongly recommends that the following recommendations be addressed to maintain compliance with primary drinking water regulations.

FACILITY	CATEGORY	FINDINGS
Management	M&R and Data Verification	It was noted during the sanitary survey that the water system did not compare monthly water production to water sold to estimate monthly water loss. Analysis of water loss is important to quantify leaks in the distribution system or other inferences.
