

State of Louisiana

Louisiana Department of Health Office of Public Health

June 30, 2022

To all interested parties:

Louisiana Department of Health (LDH) administers the Safe Drinking Water Program (SDWP) in accordance with the Safe Drinking Water Act (40 CFR 141-142) to ensure safe, quality drinking water. LDH supervises public water systems statewide by monitoring drinking water samples monthly for bacteriological contaminants (*i.e.*, total coliforms and *E. coli*) and chlorine residuals, quarterly or annually for disinfection byproducts, annually for nitrates, and annually or every three years for most chemical contaminants. Also, LDH conducts physical inspections called sanitary surveys every three to five years, investigates water complaints and performs emergency response activities.

The attached list is a compilation of all Louisiana public water systems (PWSs), which had violations of drinking water regulations in 2021. They are listed by parish and include the public water system identification (PWS ID), name of the supply, a description of the type of violation and the date of violation and are separated into community systems which serve homes and non-community systems which provide water to stores, schools, factories, rest areas, etc. A public water supply is one that serves 25 or more people or has 15 or more service connections for 60 or more days per year. There were 1,314 regulated water systems during 2021, of which 980 were community and 334 were non-community water systems. In 2021, 829 water systems (community [C] – 607 & non-community [N] – 222) had 4,729 total violations (C–3,858 & N–871). These violations fall into three major categories:

- a) **Maximum Contaminant Level violation:** Under the Safe Drinking Water Act (SDWA), the United States Environmental Protection Agency (EPA) sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs).
- b) **Treatment Technique violation:** For some regulations, the EPA establishes treatment techniques in lieu of a MCL to control unacceptable levels of certain contaminants. For example, treatment techniques have been established for viruses, bacteria, turbidity and lead.
- c) **Monitoring & Reporting violations:** A PWS is required to monitor and verify on a regular schedule that the levels of contaminants present in the water do not exceed the MCL. If a sample is not collected and analyzed, a monitoring violation occurs. A reporting violation also includes failure to report test results correctly to the state or to notify water system customers of a violation in a timely or appropriate manner.

Most drinking water violations require the water system to issue a notice to customers (public notification) of the non-compliance. The notification to customers always comes after the violation occurred. The intent of the notice is to inform the customers of the potential health risk and to motivate the water systems to undertake actions that will prevent a reoccurrence of the problem. The public notice method and timeframe depends on the severity of the violation. Acute violations (immediate health risk) require public notice within 24 hours of the violation. Most violations are not an immediate health risk and require public notice within 14 days by newspaper and 30 days by mail of receiving the violation notice.

A separate table summarizing those 2021 federal violations considered “major” within the three categories described above is included with this report. The violation counts in the enclosed summary table may not agree with the list totals discussed in this report, which includes major, as well as minor, federal and state violations for 2021.

Engineering Services

On April 1, 2016, the *Revised Total Coliform Rule* (RTCR) became effective, replacing the previous *Total Coliform Rule* (TCR). The intent of the RTCR is to increase public health protection through the reduction of potential pathways of entry for fecal contamination into distribution systems. The RTCR establishes a maximum contaminant level (MCL) for E. coli and uses E. coli and total coliforms to initiate a “find and fix” approach to address fecal contamination that could enter into the distribution system. It requires public water systems to perform assessments to identify sanitary defects and subsequently take action to correct them. All public water systems in Louisiana are required to be monitored for coliform bacteria every month. Although coliform bacteria are found throughout the environment and can enter drinking water by various mechanisms, they are primarily associated with sewage and the intestinal tract of mammals and are used as an indicator of potential health-related contamination of drinking water. Under RTCR, multiple coliform-positive samples or failure to collect follow-up samples triggers a Level 1 Assessment requirement. If the PWS triggers a Level 1 Assessment and the PWS fails to conduct or performs an inadequate Level 1 Assessment, a violation of type “LEVEL 1 ASSESS, TC POS RT NO RPT (RTCR)” or “LEVEL 1 ASSESS, MULTIPLE TC POS (RTCR)” will be noted. In 2021 there were ten such violations (C-7 & N-3) with ten systems in violation (C-7 & N-3).

A violation for fecal coliform bacteria (specifically E. coli), which is more directly related to human or animal waste, is indicated in this report as “MCL, E. COLI, POS E COLI (RTCR)”. Due to the health concerns, this is an acute violation and requires immediate public notification. Louisiana had only two acute E. coli violations (C-0 & N-2) with two systems in violation (C-0 & N-2).

During 2021 in Louisiana, bacteriological compliance sampling was conducted by individual water systems (36) or by LDH-SDWP staff. If all the required samples were not collected, sampling violations are issued and the systems are required to notify their customers. There were no violations for failing to collect all required samples in 2021. Additionally, public water systems that use groundwater as their source are required to monitor their source water (wells) for bacteriological contaminants if coliform bacteria are found during routine bacteriological sampling. Three water systems (C-1 & N-2) with a combined three “MONITORING GWR TRIGGERED/ADDITIONAL, MAJOR” violations (C-1 & N-2) failed to complete this monitoring.

The *Ground Water Rule* (GWR) requires LDH-SDWP staff to conduct sanitary surveys (onsite inspections) of PWSs every 3 to 5 years depending on the PWS type (community vs. non-community). Public water systems are required to correct significant deficiencies identified by LDH-SDWP staff during a sanitary survey. PWSs must provide a corrective action plan and schedule to LDH-SDWP within 90 days after the PWS has received a sanitary survey report citing one or more significant deficiencies. Systems that fail to correct significant deficiencies are issued a “FAILURE ADDRESS DEFICIENCY (GWR)” violation. In 2021 there were 833 (C-717 & N-116) total violations with 276 (C-236 & N-40) systems in violations.

Under the Surface Water Treatment Rules, violations contain the terms “SWTR”, “TURBIDITY”, “IESWTR” or “LT2ESWTR” are issued to public water systems, using surface water (lakes, rivers and streams) as their source, that are unable to produce water with a low enough turbidity or fail to monitor turbidity at the required frequency. Turbidity is the measure of the amount of suspended material (cloudiness) in the water. During the report year there were 54 regulated surface water systems in Louisiana, and 13 treatment technique violations (C-6 & N-7) occurred with nine systems in violation (C-6 & N-3). These violations normally occur in the winter and are associated with the increased difficulty of treating surface waters during colder months.

During 2021 in Louisiana, most of the chemical sampling (excluding lead & copper) was conducted by LDH-SDWP staff. Samples to check for numerous inorganic, organic and radiological compounds are routinely collected and analyzed. If levels of these compounds are found to be above the MCL set by the EPA, a MCL violation is issued or, if samples are not collected in a timely manner, a monitoring violation is issued. There were 8 MCL violations issued for arsenic (C-5 & N-3) with systems in violation (C-2 & N-1). Arsenic is a metal found in some ground water.

In Louisiana all public water systems are required to maintain an adequate level of disinfectant in their water system to kill potentially disease-causing microorganisms and are issued state violations if they fail to maintain a protective level of disinfectant (chlorine). Such violations are indicated as “INADEQUATE MIN CHLORINE RESIDUAL (GW&SW)” in this report. In 2021, there were 1091 inadequate disinfectant residual violations (C-703 & N-388) with 596 systems in violation (C-408 & N-188).

Per the *Stage 1 and Stage 2 Disinfectants and Disinfection By-products Rules* (DBPR), all community and non-transient non-community water systems are required to monitor for disinfection by-products. Total Trihalomethanes (TTHMs), Total Haloacetic Acids (HAA5) and Chlorite are disinfection by-products (DBPs) potentially formed by disinfectants used to treat drinking water. Effective January 1, 2017, LDH-SDWP staff conduct compliance sampling for disinfection by-products (TTHMs-HAA5). Surface water systems are additionally required to test for disinfectant by-product precursors known as Total Organic Carbon (TOC). There were 10 violations for inadequate disinfection by-product precursor removal in 2021 (C-10 & N-0), with 4 systems in violation (C-4 & N-0). Stage 2 DBPR tightened compliance by requiring each sample location in the water system to comply with the TTHM and HAA5 MCLs. For Stage 2 DBPR, there were 472 violations (C-472 & N-0) of the MCL (LRAA) for TTHMs with 93 systems in violation (C-93 & N-0), and 170 violations (C-170 & N-0) of the MCL (LRAA) for HAA5 with 35 systems in violation (C-35 & N-0). For failing to monitor for TTHMs-HAA5, one violation was issued to one community system. One violation for failure to monitor for chlorine dioxide was issued to one community system in 2021.

Per the *Lead and Copper Rule* (LCR), all community water systems and non-transient non-community water systems are required to monitor drinking water for lead and copper at their customer's taps. For lead and copper, EPA set Action Levels (AL) and requires systems to take additional actions when more than 10 percent of the samples exceed the AL for lead and/or copper. Required additional actions include increased lead and copper monitoring, consumer notification of results, public education (for lead exceedances only), water quality monitoring and implementation of corrosion control treatment. There were 3 LCR monitoring violations (C-3 & N-0) for failing to collect their initial set of routine lead and copper tap samples with three water systems (C-3 & N-0) in violation. There were 59 water systems (C-53 & N-6) issued a total of 94 LCR monitoring violations (C-87 & N-7) for failing to collect routine lead and copper tap samples. There were three water systems (C-3 & N-0) issued three LCR monitoring violations (C-3 & N-0) for failing to collect water quality parameters. There were 11 water systems (C-9 & N-2) issued a total of 17 (C-15 & N-2) LCR reporting violations for failing to submit a corrosion control treatment (CCT) recommendation/study. There was one community water system issued one LCR reporting violation for failing to distribute public education. There were 132 water systems (C-113 & N-19) with a total of 164 (C-141 & N-23) LCR reporting violations for failing to distribute lead consumer notices.

This report is an effort by LDH-SDWP to provide the general public with additional information regarding the quality of their drinking water. This report is a follow-up to earlier reports dating back to 1996. There was an overall slight increase in the number of violations issued in 2021, primarily due to an increase in the number of violations for failure to address significant deficiencies. Among the majority of the violations are DBPs (TTHM-HAA5) MCL violations. LDH-SDWP continues to focus efforts on disinfection by-product control and ensuring adequate monitoring of drinking water to protect public health while also addressing failing infrastructure and exploring options for regional consolidation of water systems. Public water systems are still challenged with meeting the tighter requirements of the new *Disinfection By-products Rule* (Stage 2) while maintaining adequate disinfectant residual in the water system to control the amoeba, *Naegleria fowleri*, which has been detected so far in nine public water systems in Louisiana. A report on the violations for 2021 will be issued in the summer of 2022. Additionally, each water system produces an annual Consumer Confidence Report which provides detailed information about sampling results and drinking water violations. This, and other drinking water information, is available on EPA's website and will be available on the LDH-SDWP website.

If you have any additional questions, please feel free to call or write.

State of Louisiana 2021 Public Water System Compliance Report

June 30, 2022

Violations Category	Maximum Contaminant Level		Treatment Technique		Significant Monitoring	
	Count of Violations	Systems in Violation	Count of Violations	Systems in Violation	Count of Violations	Systems in Violation
Chemical Contaminant Group	8	3			NR	NR
Disinfection Byproducts Rule	664	105	10	4	2	2
Lead and Copper Rule			26	16	264	179
Revised Total Coliform Rule	2	2	64	26	NR	NR
Ground Water Rule			834	276	5	5
Surface Water Treatment Rule, Interim Enhanced, Long Term 1, and Long Term 2 Surface Water Treatment Rules, and Filter Backwash Recycling Rule			19	7	14	2
Consumer Confidence Report					255	131

NR: None Reported. RTCR major Monitoring violations and Reporting violations are combined under Significant Monitoring. There were no RTCR Reporting violations issued in 2021.

Total number of regulated systems during report year	1,314
Total number of systems with violations in above categories during report year	488
Total number of violations in above categories during report year	2,167
