

## State of Louisiana

### Louisiana Department of Health

#### Office of Public Health

June 30, 2024

To all interested parties:

Louisiana Department of Health (LDH) administers the Safe Drinking Water Program (SDWP) in accordance with the Safe Drinking Water Act (40 CFR 141-142) to ensure safe, quality drinking water. LDH supervises public water systems statewide by monitoring drinking water samples monthly for bacteriological contaminants (*i.e.*, total coliforms and *E. coli*) and chlorine residuals, quarterly or annually for disinfection byproducts, annually for nitrates, and annually or every three years for most chemical contaminants. Also, LDH conducts physical inspections every three to five years, investigates water complaints and performs emergency response activities. A public water supply is one that serves 25 or more people or has 15 or more service connections for 60 or more days per year. There were 1,291 regulated water systems during 2023, of which 955 were community and 336 were non-community water systems. In 2023, 759 water systems (community [C] – 552 & non-community [N] – 207) had 4,594 total violations (C–3,807 & N–787).

The attached list is a compilation of all Louisiana public water systems (PWSs) which had violations of drinking water regulations in calendar year **2023**. The list features community systems which serve homes and non-community systems which provide water to stores, schools, factories, rest areas, etc. The systems are listed by parish and include the public water system identification number (PWS ID), name of the supply, a description of the type of violation and the date of violation. . These violations fall into three major categories:

- a) **Maximum Contaminant Level (MCL) violation:** Under the Safe Drinking Water Act (SDWA), the United States Environmental Protection Agency (EPA) sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption.
- b) **Treatment Technique (TT) violation:** For some regulations, the EPA establishes treatment techniques in lieu of a MCL to control unacceptable levels of certain contaminants. For example, treatment techniques have been established for viruses, bacteria, turbidity and lead. TT violations are also issued when PWSs fail to address significant deficiencies timely.
- c) **Monitoring & Reporting violations:** A PWS is required to monitor and verify on a regular schedule that the levels of contaminants present in the water do not exceed the MCL. If a sample is not collected and analyzed, a monitoring violation occurs. A reporting violation also includes failure to report test results correctly to the state or to notify water system customers of a violation in a timely or appropriate manner.

Most drinking water violations require the water system to issue a notice to customers (public notification) of the non-compliance. The notification to customers always comes after the violation occurred. The intent of the notice is to inform the customers of the potential health risk and to motivate the water systems to undertake actions that will prevent a reoccurrence of the problem. The public notice method and timeframe depends on the severity of the violation. Acute violations (immediate health risk) require public notice within 24 hours of the violation. Most violations are not an immediate health risk and require public notice within 14 days by newspaper and 30 days by mail of receiving the violation notice.

A separate table summarizing those 2023 federal violations considered “major” within the three categories described above is included with this report. The violation counts in the enclosed summary table may not agree

with the list totals discussed in this report, which includes major, as well as minor, federal and state violations for 2023.

On April 1, 2016, the *Revised Total Coliform Rule* (RTCR) became effective, replacing the previous *Total Coliform Rule* (TCR). The intent of the RTCR is to increase public health protection through the reduction of potential pathways of entry for fecal contamination into distribution systems. The RTCR establishes a maximum contaminant level (MCL) for E. coli and uses E. coli and total coliforms to initiate a “find and fix” approach to address fecal contamination that could enter into the distribution system. The Rule requires public water systems to perform assessments to identify sanitary defects and subsequently take action to correct them. All public water systems in Louisiana are required to be monitored for coliform bacteria every month. Although coliform bacteria are found throughout the environment and can enter drinking water through various mechanisms, they are primarily associated with sewage and the intestinal tract of mammals and are used as an indicator of potential contamination of drinking water. Under the RTCR, multiple coliform-positive samples, or failure to collect follow-up samples, triggers a Level 1 Assessment requirement. If the PWS triggers a Level 1 Assessment and the PWS fails to conduct or performs an inadequate Level 1 Assessment, a violation of type “LEVEL 1 ASSESS, TC POS RT NO RPT (RTCR)” or “LEVEL 1 ASSESS, MULTIPLE TC POS (RTCR)” will be noted. In 2023, there were 18 such violations (C-12 & N-6) with 17 systems in violation (C-11 & N-6).

A violation for fecal coliform bacteria (specifically E. coli), which is more directly related to human or animal waste, is indicated in this report as “MCL, E. COLI, POS E COLI (RTCR)”. Due to the health concerns associated with E.coli, this is an acute violation and requires an immediate public notification. There were zero acute E. coli violations in 2023.

In 2023, bacteriological compliance sampling was primarily conducted by LDH-SDWP staff or by individual water systems (26). If all of the required samples were not collected, sampling violations are issued and the systems are required to notify their customers. There were no violations for failing to collect all required samples in 2023. Additionally, public water systems that use groundwater as their source are required to monitor their source water (wells) for bacteriological contaminants if coliform bacteria is found in the distribution system during routine bacteriological sampling. Three water systems (C-1 & N-2) with a combined three “MONITORING GWR TRIGGERED/ADDITIONAL, MAJOR” violations (C-1 & N-2) failed to complete this monitoring.

The *Ground Water Rule* (GWR) requires LDH-SDWP staff to conduct sanitary surveys (onsite inspections) of PWSs every 3 to 5 years depending on the PWS type (community vs. non-community). Public water systems are required to correct significant deficiencies identified by LDH-SDWP staff during a sanitary survey. PWSs must provide a corrective action plan (CAP) and schedule to LDH-SDWP within 90 days after the PWS has received a sanitary survey report citing one or more significant deficiencies. Systems that fail to correct significant deficiencies or provide a CAP are issued a “FAILURE ADDRESS DEFICIENCY (GWR)” Treatment Technique violation. In 2023, there were 892 (C-770 & N-122) total violations with 262 (C-218 & N-44) systems in violations.

Under the *Surface Water Treatment Rules*, a treatment technique violation containing the terms “SINGLE COMB FLTR EFFLUENT (IESWTR/LT1)” or “MONTHLY COMB FLTR EFFLUENT (IESWTR/LT1)” are issued to public water systems, using surface water (lakes, rivers and streams) as their source, that are unable to produce water with a low enough turbidity. Turbidity is the measure of the amount of suspended material (cloudiness) in the water. In 2023, there were 53 regulated surface water systems in Louisiana, and 10 TT violations (C-7 & N-3) occurred with six systems in violation (C-4 & N-2). These violations normally occur in the winter and are associated with the increased difficulty of treating surface waters during colder months.

In 2023, most of the chemical sampling (excluding lead & copper) was conducted by LDH-SDWP staff. Samples to check for numerous inorganic, organic and radiological compounds are routinely collected and analyzed. If levels of these compounds are found to be above the MCL set by the EPA, a MCL violation is issued or, if samples are not collected in a timely manner, a monitoring violation is issued. There were 10 MCL violations issued for arsenic (C-8 & N-2) with three systems in violation (C-2 & N-1). Arsenic is a metal found in some ground water.

In Louisiana, all public water systems are required to maintain an adequate level of disinfectant in their water system to kill potentially disease-causing microorganisms and are issued state violations if they fail to maintain a protective level of disinfectant (chlorine). Such violations are indicated as “INADEQUATE MIN CHLORINE RESIDUAL (GW&SW)” in this report. In 2023, there were 746 inadequate disinfectant residual violations (C–505 & N–241) with 473 systems in violation (C–313 & N–160). If more than five percent of the monthly disinfectant residual measurements are below the state minimum disinfectant level for two consecutive months, the water system is issued a violation containing “5% DS BELOW MIN 0.5-2 MONTHS CONSEC” in lieu of the INADEQUATE MIN CHLORINE RESIDUAL violation. In 2023, there were 429 violations where five percent of sample results were below minimum disinfectant residual (C–275 & N–154) with 154 systems in violation (C–90 & N–64).

Total Trihalomethanes (TTHMs), Total Haloacetic Acids (HAA5) and Chlorite are disinfection by-products (DBPs) potentially formed by adding a disinfectant to drinking water. The formation of these DBPs are measured out in the distribution system to determine if they are found to be above the MCL set by EPA. Per the *Stage 1 and Stage 2 Disinfectants and Disinfection By-products Rules* (DBPR), all community and non-transient non-community water systems are required to monitor for disinfection by-products. In 2023, LDH-SDWP staff conducted compliance sampling for disinfection by-products (TTHMs-HAA5). Surface water systems are additionally required to test for disinfectant by-product precursors known as Total Organic Carbon (TOC). There were two violations for inadequate disinfection by-product precursor removal in 2023 (C–2 & N–0), with one system in violation (C–1 & N–0). Stage 2 DBPR tightened compliance by requiring multiple locations in the water system to comply with the TTHM and HAA5 MCLs. For Stage 2 DBPR, there were 398 violations (C–398 & N–0) of the MCL (LRAA) for TTHMs with 80 systems in violation (C–80 & N–0), and 126 violations (C–126 & N–0) of the MCL (LRAA) for HAA5 with 28 systems in violation (C–28 & N–0). Six TOC violations were issued to one community water system. There was a small decrease in the count of DBP MCL violations for this report year; however, public water systems are still challenged with meeting the tighter requirements of the new *Disinfection By-products Rule* (Stage 2) while maintaining adequate disinfectant residual in the water system to control the amoeba, *Naegleria fowleri*.

Per the *Lead and Copper Rule* (LCR), all community water systems and non-transient non-community water systems are required to monitor drinking water for lead and copper at their customer’s taps. For lead and copper, EPA set Action Levels (AL) and requires systems to take additional actions when more than 10 percent of the samples exceed the AL for lead and/or copper. Required additional actions include increased lead and copper monitoring, consumer notification of results, public education (for lead exceedances only), water quality monitoring and implementation of corrosion control treatment. There were six LCR monitoring violations (C–5 & N–1) for failing to collect the initial set of routine lead and copper tap samples with four water systems (C–3 & N–1) in violation. There were 43 water systems (C–38 & N–5) issued a total of 95 LCR monitoring violations (C–86 & N–9) for failing to collect routine lead and copper tap samples. There were eight water systems (C–7 & N–1) issued eight LCR monitoring violations (C–7 & N–1) for failing to collect water quality parameters. There were nine water systems (C–8 & N–1) issued a total of 11 (C–10 & N–1) LCR reporting violations for failing to submit a corrosion control treatment (CCT) recommendation/study. There were three water systems (C–3 & N–0) issued a total of four (C–4 & N–0) LCR treatment technique violations for failing to install corrosion control treatment (CCT). There was one community water system issued one LCR reporting violation for failing to distribute public education. There were 178 water systems (C–151 & N–27) with a total of 227 (C–192 & N–35) LCR reporting violations for failing to distribute lead consumer notices to customers sampled for lead and copper.

This report is an effort by LDH-SDWP to provide the general public with additional information regarding the quality of their drinking water. This report is a follow-up to earlier reports dating back to 1996. There was an overall decrease in the number of violations issued in 2023, primarily due to better compliance with minimum disinfectant levels and the Consumer Confidence Rule. Of the violations issued, the majority are failure to address significant deficiencies, and DBPs (TTHM-HAA5) MCL violations. LDH-SDWP continues to focus efforts on requiring disinfection by-product control and ensuring adequate monitoring of drinking water while also addressing failing infrastructure and exploring options for regional consolidation of water systems. A report on the violations for 2024 will be issued in the summer of 2025. Additionally, each water system produces an annual Consumer Confidence Report which provides detailed information about sampling results and drinking water violations. This, and other drinking water information, is available on the LDH-SDWP website.

If you have any additional questions, please feel free to call or write.
