

## Some things a baby with normal hearing should be able to do:

### Birth to 3 Months of Age

- Blinks or jumps when there is a sudden, loud sound
- Quiets or smiles when spoken to
- Makes sounds like "ohh," "ahh"

### 3 to 6 Months of Age

- Looks for sounds with eyes
- Starts babbling ("baba," "mama," "gaga")
- Uses many sounds, squeals, and chuckles

### 6 to 9 Months of Age

- Turns head toward loud sounds
- Understands "no-no" or "bye-bye"
- Babbles, for example "baba," "mama," "gaga"

### 9 to 12 Months of Age

- Repeats simple words and sounds you make
- Correctly uses "mama" or "dada"
- Responds to singing or music
- Points to favorite toys and objects when asked

If you have questions about your baby's hearing or this list, talk with your baby's health professional.

This document was published by the Hearing, Speech and Vision Program to inform expectant parents about newborn hearing screening. This material was printed according to standards for printing by state agencies established pursuant to R.S. 43:31. Supported in part by a grant from the Maternal and Child Health Bureau, Health Resources Administration, Department of Health and Human Services.

# Can Your Baby Hear?

Your baby's first hearing test.

# Can Your Baby Hear?

## Why should my baby's hearing be tested?

- Most babies can hear well at birth, but a few do not.
- We test all babies to find the ones who may not be able to hear. Testing is the only way to know if a baby has hearing loss.
- It is important to find hearing loss as soon as possible. Babies whose hearing loss is not found early will have a hard time learning.
- If we find hearing loss early, there are many ways we can help your baby.

*Make sure your baby's hearing is tested before you leave the hospital.*

## What should I know about the test?

- The test is safe and painless and can be done in about 10 minutes.
- Most babies sleep through the test.
- You will get the test results before you leave the hospital.
- Be sure to tell the hospital the name of your baby's health professional or clinic so they can send them the results.

## Why do some babies need another hearing test?

- Some babies may need another test because:
  - fluid in the ear
  - noise in the testing room
  - baby was moving a lot
  - baby has hearing loss
- Most babies who need another test have normal hearing. Some will have hearing loss.
- If your baby does not pass the hearing test, make sure he or she is tested again as soon as possible.

## Can a newborn baby pass the hearing test and still have hearing loss?

- Yes, some babies hear well enough to pass the first test, but lose their hearing later because of:
  - some illnesses
  - some medicines
  - some injuries
  - a family history of hearing loss
- Watch for signs of hearing loss as your baby grows.
- Use the list on the back cover as a guide.
