

Note on the Data: The Total Case Counts are cumulative counts and include all cases reported since the beginning of the outbreak, including those who have recovered, died, or have been moved out of the facility. Total cases should not be compared to the current census to determine percent infected, as the census counts for many facilities have decreased over time. Some nursing homes are actively accepting COVID+ patients from other facilities; case counts for these nursing homes may include individuals diagnosed at another facility. Currently, all deaths in individuals with COVID positive lab results are being counted, this may include individuals with pre-existing conditions, individuals who have met the "end of isolation" criteria prior to death, or individuals ultimately determined to have another cause of death. "Recovery" is defined as having met the "discontinuation of transmission based precautions" criteria for residents or "return to work" criteria for staff. "New Cases" are determined by subtracting the most recent counts from last week's reported counts. Large increases in cases are often related to facility-wide testing and the detection of asymptomatic cases, some of whom may be out of their infectious period at the time of detection. All case investigations are considered ongoing and numbers may change as more information becomes available. Please note the addition of the data field "Locally Acquired Cases," which is defined as the number of infections which began while at this facility. This differs from the cumulative "total count" which includes all individuals who have resided at the facility during the course of their infection. As many facilities are actively admitting COVID positive residents, this metric helps identify newly infected cases occurring at the facility.

Large increases in cases are often related to facility-wide testing and the detection of asymptomatic cases, some of whom may be out of their infectious period at the time of detection. All case investigations are considered ongoing and numbers may change as more information becomes available. Please note the addition of the data field "Locally Acquired Cases," which is defined as the number of infections which began while at this facility. This differs from the cumulative "total count" which includes all individuals who have resided at the facility during the course of their infection. As many facilities are actively admitting COVID positive residents, this metric helps identify newly infected cases occurring at the facility.

Note on the Data: The Total Case Counts are cumulative counts and include all cases reported since the beginning of the outbreak, including those who have recovered, died, or have been moved out of the facility. Total cases should not be compared to the current census to determine percent infected, as the census counts for many facilities have decreased over time. Some nursing homes are actively accepting COVID+ patients from other facilities; case counts for these nursing homes may include individuals diagnosed at another facility. Currently, all deaths in individuals with COVID positive lab results are being counted, this may include individuals with pre-existing conditions, individuals who have met the "end of isolation" criteria prior to death, or individuals ultimately determined to have another cause of death. "Recovery" is defined as having met the "discontinuation of transmission based precautions" criteria for residents or "return to work" criteria for staff. "New Cases" are determined by subtracting the most recent counts from last week's reported counts. Large increases in cases are often related to facility-wide testing and the detection of asymptomatic cases, some of whom may be out of their infectious period at the time of detection. All case investigations are considered ongoing and numbers may change as more information becomes available. Please note the addition of the data field "Locally Acquired Cases," which is defined as the number of infections which began while at this facility.
