

If you've been exposed to someone who is being tested for
COVID-19 (coronavirus)
be safe: self-isolate until this person receives test results.

If you were in close contact with someone who tested positive while symptomatic, you should **SELF-ISOLATE** for 14 days and monitor your symptoms.

If you test negative, please continue to practice good hygiene and self-isolation when appropriate. You do not need to be tested if you do not have any symptoms.

If you begin to feel symptomatic – fever, cough, trouble breathing – you need to be tested as soon as possible.

Where can you go to get tested for COVID-19?

Call 211 or your healthcare provider.

Remember to **CALL AHEAD BEFORE** you show up at the doctor's office.
