a New diagnoses include only individuals whose initial HIV diagnosis was made in Louisiana.
b Prevalent cases include all cases presumed to be alive and living in Louisiana, regardless of the state of initial HIV report.
c Cases with unknown/missing values for a demographic variable have been excluded from the counts and percentages for the demographic category. Total number of new diagnoses and prevalence includes all cases, regardless of demographic variable completeness.
c Cases per 100,000 population. Rates not available (n/a) for case counts less than 5. Rates not available for other/unknown race groups, transgender groups, and risk exposure groups.
c Race/ethnicity "Other" category does not include missing or unknown race/ethnicity.
c Cases are presented by current gender identity rather than sex at birth.
d Age when first diagnosed with HIV is used for new HIV diagnoses. Current age is used for HIV prevalence. Age categories align with 2020 census age groups.
h Risk shows imputed risk, not reported risk. Persons with no imputed risk are not included in the total percentage. GBM = Gay, bisexual, & other men who have sex with men; PWID = Persons who inject drugs.
I Parish where first diagnosed with HIV is used for new HIV diagnoses. Parish of current residence is used for HIV prevalence. Persons without a parish of residence are not included in the total percentage.

a New cases only include those who indicated a Louisiana residence at the time of delivery.
 b Congenital syphilis rates are calculated per 100,000 live births. Maternal rates are calculated using yearly census data, per 100,000 population. Percentages for maternal variables reflect distinct count of mothers. Rates for case counts under 20 are unreliable. Rates for case counts under 5 are not available.
 c Reflects maternal age at delivery.
 d Reflects maternal and infant region of residence at delivery.

a New diagnoses include only individuals whose initial chronic hepatitis C diagnosis was made in Louisiana.
 b Cases with unknown/missing values for a demographic variable have been excluded from the counts and percentages for the demographic category. Total number of new diagnoses includes all cases, regardless of demographic variable completeness.
 c Cases per 100,000 population. Rates not available (n/a) for case counts less than 5. Rates not available for "Other" race

Cases per 100,000 population. Rates not available (n/a) for case counts less than 5. Rates not available for "Other" race groups.
 Race/ethnicity "Other" category does not include missing or unknown race/ethnicity.
 Age when first diagnosed with chronic hepatitis C is used for new diagnoses. Age categories align with 2020 census age groups.
 Parish where first diagnosed with chronic hepatitis C is used for new diagnoses. Persons without a parish of residence are not included in the total percentage.
 Affected subpopulations with counts less than 5 are excluded.
