## CLINICAL OUTCOMES

A total of 95% (1,949/2,055) of clients were defined as in care. These clients had at least one CD4 or viral load test reported in the past year.

Seventy-four percent (1,514/2,055) of clients were virally suppressed. These clients had a viral load test reported in the past year with the most recent result <200 copies/mL.

For clients served by RW Part B CBO program who were in care, 78% (1,514/1,949) were virally suppressed. For the larger HIV+ population living in Louisiana who were in care, 80% (11,469/14,333) were virally suppressed.

Clients who are white, older and have higher incomes were more likely to be virally suppressed.

Clients with who are uninsured are less likely to be virally suppressed. Only 61% (222/363) of those who are uninsured achieved viral suppression compared to 79% (447/568) of those with private health insurance.

**UNMET NEED**

Unmet need includes individuals who are defined as out of care. These individuals know their positive HIV status and are not receiving HIV-related medical care. Individuals living with HIV who have no evidence of receiving a viral load test or CD4 count within a 12-month period meet the definition of unmet need.

Thirty-one percent (5,397/19,730) of PLWH in Louisiana met the definition for unmet need between July 1, 2015 and June 30, 2016.

Males, Hispanics, and individuals 65 years and older were most likely not to be receiving HIV-related medical care.

Regions supported by Ryan White Part B CBOs with the largest proportion of people with unmet need include Lake Charles and Shreveport.
