

# Generator Safety Tips

## 1 Carbon Monoxide Kills!

Portable generators produce carbon monoxide, a colorless, odorless, and tasteless gas.

## 2 Do NOT use your generator:

- Inside an enclosed structure like a garage.
- Within 20 feet of your home.

## 3 Cool before refuel!

Turn off the generator and wait 15 minutes before refueling to reduce risk of accidental fire.

## 4 Stay Alert!

Place at least one battery-operated carbon monoxide detector on each level of your home near bedrooms. Call 911 if the alarm goes off.

## 5 Protect your household.

If you or someone else experiences headaches, dizziness, or confusion, immediately vacate your home and go to your nearest healthcare provider.
